< what are they going for right now

Last known price of $129.97... I have not looked recently as we have
sold through what we had... Our store owner put the Pro-94 on an in
store sale at $149.00 just to get rid of those radios...

FYI,

The PRO-93 does not decode PL or DPL Tones. Only the PRO-92 HH does this.

Pete

Most, if not all, of the stores sold out of the PRO-93 recently.
Monitoring Times mentioned the sale. That news prompted a lot of
potential buyers to visit the stores because this model has PL
decode. Christmas brought more than usual the number of store
patrons, and this too depleted the inventory.

No big deal. There will always be new handhelds and sales. Scanner
technology is in the midst of change right now. In the long run you
might be glad that you could not buy the PRO-93 when you wanted the
unit.

By the way, expect the economy to decline now that Christmas is over.
You will see many sales in the weeks ahead. Hopefully, you already
bought a PRO-95. If you have not, then get one. They are inexpensive
and terrific!

5698. Display of Talk Groups.

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-01 18:30:17 UTC
From: Keith
Topic: 5698 Message: 5698

In the past my 95 would display the talkgroup name, but now it displays the bank name and talkgroup number at the bottom. Any one know how to get the 95 to revert to showing the talk group name instead of the bank name and talk group number?

Keith

5699. RE: [PRO-93_95] Display of Talk Groups.

From: Don Starr
Topic: 5698 Message: 5699

Press the "Text" button while receiving a trunked signal (i.e. while it's displaying the talk group ID).

Keith,
All you need to do (if I understand your question correctley) when you recive a transmission that stops on a TALK GROUP just press your TEXT key while they are still bradcasting. This will switch it right back to how you had it in the past. Hope this is the answer to the question you asked.

Hi everybody... I need some help on my pro-95. I have a Motorola trunk system programed for our countys 911 system and I would like to know how do you lock out a talk-group. Do you just hit lock out or will that lock-out the whole freq????? One other question is when i was programing in the talk groups themselves i would hit like say 3 and 2 would come up on the screen... why would that be happening when i pushed the buttons to program regular freq in the correct number that i punched in poped up, so I know there isn't anything wrong with the scanner........ THANKS

Hitting the lockout while in scan mode locks out the frequency...
You will need to be in the program mode for talkgroups... <prog>,
then <trunk>..

> when i pushed the buttons to program regular freq in the correct
> number that i punched in poped up, so I know there isn't anything
> wrong with the scanner........

I'm not clear on where you are and what your doing... If you are in
regular program mode, the top left corner will say "P" next to the
channel number to be programmed... You will need to input a valid
frequency and press enter... From there you can add text, numbers,
ect... You may also wish to download my simplified programming
document in the files area... That may step you through what you are
trying to do...

The only way to L/O a specific group ID is to store it, lockout that group and monitor in closed mode. It's covered on page 65 of the manual.

I'm over my head here, because I do EDACS mostly, but I have read that MOTO systems change the right digit of talkgroup IDs for special purposes. MAKING UP the numbers fo an example, if you were trying to enter 6543 as a group number, and the scanner "knew" that the "3" designated something special and the correct ID was 6542, it would enter 6542, making you think the "3" you pushed was entered as a "2." Or something like that, in some universe similar to this one.

Joe

Motorola systems must use numbers divisible by 8 if my memory serves
properly.. If you enter an odd number, its not valid...

Your example above would not be a Motorola II system, because all
tallgroup IDs are multiple of 16, thus would have to end with an even
number. 6544 is the closest type II number to your example.

Frank

To follow AEGIS, you will need a full blown transmit radio... These are running around 3 thousand bucks... Your nice new $3000.00 radio must also have an LID number... These are given by the system administrator once you provide him with your serial number of the radio to be entered into the radio system... If you are part of the public service in question, he is not going to issue that number for the radio to log into the system... ...making your investment a paper weight... Stick to the scanner...

5727. Pro-95 & Win 95 trunking question

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-03 18:50:34 UTC
From: Dennis <dennis70@comcast.net>
Topic: 5727 Message: 5727

Good Afternoon;

I am trying to enter type 1 trunked system ID's (E1P2) into the Win 95 program and keep getting the same error. For example I enter talk group ID 505-03, also tried 505-3, which is used by PD. The error I get is "<505-03> ID must be in the range of 0-65520 and must be a multiple of 16". The ID block on the Win 96 program shows 000-00. The size code for all blocks is S04. So I am doing something wrong here?

Thanks
Dennis

5728. RE: [PRO-93_95] Pro-95 & Win 95 trunking question

Yahoo group: PRO-93_95 (2003)

From: Don Starr
Topic: 5727 Message: 5728

What system is this? Either your fleet map or your IDs are wrong. Size code
4 (S04)
does not use the "fleet" field, and you're entering a fleet value of 5:
505-03
BFF-SS
B = Block
FF = Fleet
SS = Subfleet

For the E1P2 fleet map (all size codes are S04), your fleet values must all
be 00. So,
either the E1P2 fleet map is incorrect, or the talk group ID of 505-03 is
wrong.

(The error message in this case is misleading.)

-Don

What you describe below is not an E1P2 fleet map. E1P2 sets all blocks to size
code S4, by definition.

Try setting each block individually, instead of using a "preprogrammed"
fleet map.

There are a few workarounds (don't use Alpha Tags on the affected channels),
but
the only real "remedy" is to have your 93 upgraded beyond version 1.00 of
the
firmware.

From: Don <dkadonh@yahoo.com>
Topic: 5743 Message: 5743

I know that LTR Trunking is different from Motorola and EDACS
trunking in that there is no control channel.
And I have the Freq for the local sherrif @ 10 channels

And I found a list of Talkgroups: 0-20-010.......

How do I set up or trunk the band to display the talkgroups
I cannot input the 6 digit talk group and don't know how to assign a
trunk group to this bank

Any help on monitoring a LTR group for a Radio Shack Pro 95 would be
helpful..

Thanks
Don

The only option you have with the PRO-95 is to enter the system frequencies for the LTR system in FM mode. The scanner will monitor LTR traffic, but will not track talkgroup activity.

If the LTR system is not very busy you might find that the Sheriff calls almost always happen on the same channel. This is a charateristic of LTR's "home repeater" system architecture and you may be able to use it to your advantage.

From: user544 <user544@hotmail.com>
Topic: 5750 Message: 5750

First, I want to make very clear that I have not tried if this cable works, since I don't have a USB port. I am about to purchase a new computer and will try it in a week or two. With that said; if you still don't have a cable for your pro93/95, then perhaps you might want to try the TI-Graph link USB. It costs $19.99 but has a $15 mail in rebate. I bought mine from officemax with a TI-83+ calculator and they gave me and addition $5 off so the cable was free. I also saw one today at RadioShack. It has a 3/23 stereo plug so you'll have to buy an adaptor. Basically, if you want a cable under $10 you can see if it works by looking for the TI-Graph link USB at your local RadioShack, Officemax, Office Depot, or any other store that sells them.

info.

I use the Belkin F5U109 adapter with XP Pro. Belkin markets this adapter as a PDA Serial to USB adapter, but I use it for all my serial devices (Pro-95, GPS, Telescope, etc.) I think they run around $29, are small enough to fit in a laptop bag and require no external power. Once connected, it shows up as COM4.

Hope this helps

5756. Antenna Question

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-07 02:39:34 UTC
From: user544 <user544@hotmail.com>
Topic: 1029 Message: 5756

I bought a Scantenna when they were on clearance and finally put it on my roof. I've heard that it overloads a pro-93 and the way to fix that is to put on the attenuator. However, my pro-93 must be extrememly sensitive or the antenna must be in a great location. With the attenuator on and the squelch turned completely counter clockwise my scanner is still overloaded. I pick up more signals with the rubber duck than with the Scantenna. So my idea was to attenuate the signal before I connect the cable to my scanner. Since I lack electronic knowledge, I was wondering if a resistor would work. I want to put a variable resistor between the cable and scanner, but what value would I need if this would even work. If not, how could I attenuate the signal?

5757. Re: Antenna Question

You could use the variable attenuator sold at Radio Shack for TV usage. It will require F to BNC adapters.

Its not a signal strength meter of any shape or form... Its a number
that indicates the number of channel decodes per second... Its in
the Pro93 Pro95 simplified instructions I have in the file area
here...

On the Pro 93, I believe you turn the scanner on and while the welcome message is displayed, hold down the 3.
My Pro 93 had a firmware version of 1.00. I recently sent it back to Radio Shack for an upgrade which I think will come back as version 1.03. I was told that the turnaround wouldn't be that long, but I can't say for sure as mine has only been gone for about a week and a half.

From: user544 <user544@hotmail.com>
Topic: 5741 Message: 5766

I sent my radio in for a firmware upgrade and the radio shack guy said it would be two weeks. I received a call exactly on the 14th day and picked up my radio. Two weeks seems a lot longer than you think. I actually missed my radio.

Do a web search for "Pi" or "T" attenuators. There are calculators online to find the resistor values, and they are simple to construct.

The only attenuator I found in the catalog was one that cost $80.00.
If my idea of varaiable resistor would work then it would be a lot
cheapier.

Anyone have a Win95 frequency file they could share?

I uploaded one to the P95 files section. I am putting it together for a trip I will be making in May, so consider it a work in progress. Where the bank shows "Green" that is the Green airport in Rhode Island. O'Hare is the O'Hare airport where I will be changing planes so I made a list to keep me company while I was there.

I also inlcuded some stuff for Nellis AFB using the new version of Win95. The "short list" I found on a site that said it was a collection of the most active freqs in vegas.

Hope it helps.

I took a look at your file and you may have gotten some old info on the casinos. Most of them are trunked. Here's a link to a web page that has current casino info. Scroll down to the Nevada area and you'll see the Casino section.

Hi Mark.

I'm not sure if this is what you are after, but I found that a leather holster for the older Motorola handheld business walkie talkies work fairly well. The hard leather case allows the pro95 to slip in, then a strap snaps over the top of the radio to hold it in place. There is a hard leather belt holder attached to the back. I use mine in the pits (racing) where I can listen to the com's between our drivers and pit chief. These holsters hold the radio firmly, especially when you are jumping over a wall to service a car during a pit stop.

I have two that I own. one which is made by Motorola, has a swivel belt loop, and has a very snug fit for the scanner (I had to remove the plastic belt clip from the Pro95 for it to fit, but since the whole holster now attaches to my belt, this is fine).

The other is from Racing Electronics. You can find them online. The radio fits in this holster a bit looser, and I can keep the plastic belt clip on the back.

Both holsters can be modified for the scanner, if you want to. You could cut out the key pad area, and cut some additional area out around the speaker. I have no need since I listen through headphones.

I put some pictures of the radio in the holster in the photo's section of this group.

Marty

I have a PRO-64 and a PRO-92, with the official cases for each from
Radio Shack. The belt clip on the scanner has to be removed for
both, so taking the clip off is nothing special: just a standard
thing when the scanner goes into a properly sized case.

I believe that the dimensions for the 93 are the same as the 95. The spirit case from Motorola I doubt is the correct case. I believe those radios are smaller. I can give you what numbers I can find on the case of the Motorola case I have. On the back of the case itself, the following numbers are embossed into the leather: 1502171J03, and the belt clip has: 42C05857B01. I found this case on eBay, and purchased it (brand new) for very cheap! I would suggest keeping an eye out for a case on eBay for a couple of weeks before trying to purchase one of these cases from the manufacturer. As a rule of thumb, you might want to look for a case that is designed for the Motorola HT90. You can see a picture of a HT90 on this eBay site: http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem &category=4669&item=3104954994 The case is of excellent quality! Very sturdy. After a quick search of eBay for some radio holsters, I found the following (if interested) that might work: http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem &category=296&item=1949308266 http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem &category=296&item=1950379291 http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem &category=296&item=1950379431 http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem &category=296&item=1950379585 http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem &category=296&item=1950379714 Some of the above sites say they have a leather holster for various radios, but show a picture of four holsters, so I don't know which one you would end up with. Contact the seller and ask if any of the holsters will accept an HT90. In the picture that shows four radio holsters, the two on the far right look very similar to the holster I use. Good luck! 5795. Why is my Pro-93 stopping on Control Channel

I have a Pro-93 and I programmed a Motorola Type-II system. The bank is set for Motorola Trunking, I have the desired talkgroup ID's programmed and the bank is in the closed mode and yet the radio will still stop on the CNTL channel and I will hear the control channel audio through the speakers. The strangest thing is that it doesn't do it consistently. This one has me stumped, anyone have any ideas?

In addition to setting the bank's mode to Motorola, did you set each of the control channel frequencies to Motorola mode?

Do you happen to have the control channel frequency in the same bank, but as a non-trunked channel (similar to above, but maybe you have a duplicate of the control freq - one set to Mot, one as non-trunked)?

Perhaps the control channel freq is also in another bank?

So I want to buy an Motorola HT90 case for my radioshack Pro-93 right? does it fit the pro-93 well? which would I want a swivel or non swivel? which is more durable and moves less. I am assuming the non-swivel. Thanks, Zach ----- Original Message ----- From: Marty Grove To: PRO-93_95@yahoogroups.com Sent: Thursday, January 09, 2003 10:47 AM Subject: RE: RE: [PRO-93_95] Looking for case for my Pro95!!! I believe that the dimensions for the 93 are the same as the 95. The spirit case from Motorola I doubt is the correct case. I believe those radios are smaller. I can give you what numbers I can find on the case of the Motorola case I have. On the back of the case itself, the following numbers are embossed into the leather: 1502171J03, and the belt clip has: 42C05857B01. I found this case on eBay, and purchased it (brand new) for very cheap! I would suggest keeping an eye out for a case on eBay for a couple of weeks before trying to purchase one of these cases from the manufacturer. As a rule of thumb, you might want to look for a case that is designed for the Motorola HT90. You can see a picture of a HT90 on this eBay site: http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem &category=4669&item=3104954994 The case is of excellent quality! Very sturdy. Thanks for everyone's help. The motorola case would probably work. However, I am looking for something that fits more like a glove. I want basic protection of the display, keys, ect.

I won't be using this in a harsh environment, I just want a little protection from the day to day normal usage!!!

Thanks Again,
Mark

Thanks,

These are the kind of ideas I am looking for, but everything checked out. Interesting enough, when it stops on the Control channel it actually has MOT: CNTRL come up on the ID line, so it knows its a control channel. I thought in closed mode it wouldn't stop on any CNTRL channel or talkgroups that were not entered in the ID sub-banks.

The strangest thing is it doesn't happen all the time.

My PRO-95 does the same thing. I just turn it off and on again and
it's fine.

If you just want protectiuon from dust
and spills, you might try using a
Ziploc bag, which I just tried.

I used the quart size. Removed the
antenna and belt clip from the Pro-95
and placed it, antenna-end first, into
the baggie with the baggie logo on the
back side. Marked the location of the
antenna and knobs with a sharpie marker.
Removed bag and cut round holes with a
craft knife. Re-insterted Pro-95 and
re-attached antenna. Poked holes for
screws, headphone, power and cable jacks
using a toothpick. Re-attached the belt
clip. Then used scissors to trim the
baggie, first cut the "zipper" at both
sides, so only about 1-1/2" are left.
Then cut away one side of the baggie so
what's left overlaps by about half an
inch. Carefully made a "hospital corner"
style fold at the top and then folded
overlapping parts of baggie and sealed
with clear tape. Then sealed "zipper"
and folded over and sealed with a small
piece of removable tape. To replace the
batteries you need to remove that last
open the zip and slide baggie up a bit.

I do the same kind of thing on remotes
that I want to protect from spills and
dust.

This idea might also help if you want
shock protection as well as access to
the keypad. If you got a leather case
and cut a hole for the keypad, then
the baggie provides plastic window.

Geoff

From: Tony <ajm747@cfl.rr.com>
Topic: 5808 Message: 5808

I was lucky enough to get a case custom designed for the 93 from racescanners.com about a year ago but unfortunately they are no longer available. I did notice that my 93 has ALMOST the same dimensions as my Motorola MTS2000. I have a rather expensive case/radio strap that I use at work for the MTS2000 that I purchased here: http://www.radiotech.com/products.html

They have quite a large selection but you will have to research radio dimensions/keypad setups to find the proper case and get a good fit.

Tony

5809. Increasing range-antenna or amp?

Well, it could do both. You didn't specify if this would be for mobile use or for base use. I am assuming base. The antenna you plan to tune to a specific frequency can help you with distant freqs if you get it up in the air a bit. It will also assist in getting weaker nearby signals. An antenna booster will likely overload the sensitive 93s and 95s without atennuating the heck out of it. Get or build an antenna that is tuned to your frequency, or buy an omni-directional discone or Scantenna and get it up in the air with some quality coax for stationary monitoring improvement. A $300.00 radio is worthless with a cheap antenna and cheap lossy coax.

>> you may have gotten some old info on the
>> casinos. Most of them are trunked.

I have that list, but I have also put in a lot of conventional freqs since the stuff I have been reading says that not all casinos are trunked. There just is not enought spectrum space.

As I said in the original letter, this is a "work in progress." I have not finished everything for the trip. I intend to take along the printouts and if the conventionals don't turn out then I'll put in some more trunked systems. Although it is a turnoff not to be able to know what I am listening to (i.e. talkgroups).

From: user544 <user544@hotmail.com>
Topic: 1029 Message: 5814

richwol,
Thank you very much for suggesting 15-578. It was discontinued some time ago and I found one for 47 cents! It looks exactly the same as the 15-678 except the case is black instead of silver and 15-678 is $8.99. It says the attenuation is from 0 to 20db, does anybody know is the attenuation is the same on the 15-678? Btw, I'm from the same area as you and if it works good for you it should work good for me.

5815. Greater than 1300MHz with Win95?

Yahoo group: PRO-93_95 (2003)

From: dracomalfoy96 <dracomalfoy96@yahoo.com>
Topic: 5815 Message: 5815

I programmed in 1600MHz and 1700Mhz frequencies into my PRO-95. They actually went in with no problem using Win95. Does the scanner actually pick up this frequency? or is it just a bug and it is really at the max 1300MHz?

Thanks,
Mike

Only while scanning conventional will the radio do this, trunking banks will not skip, though they do monitor the priority. I have the weather frequency in priority and if my radio is turned on at 11:32 am Eastern, the alert tones will activate. The 92 and 2067 do this also.

5823. B tip, C tip...Doesn't matter any more!

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-11 19:13:35 UTC
From: Thomas T Ciciora
Topic: 5823 Message: 5823

My cordless headset went to its reward this morning. I originally bought it off of a closeout table at a CompUSA with no batteries or wall wart. The batteries were a painful $40 on line, so I wasn't going to spend for the 'factory' wall wart. Being a 'frugal' ham, I also frequent the local Big Lots. They had a generic adapter, 3-12v @ 300ma switch adjustable and polarity reversible terminating in a 'T' arrangement containing four plugs with yet another plug and a 9V square battery clip on separate flying cords. I had bought a few of these for other items that were missing adaptors, so I wasn't going to throw it in the can after the phone, but wrap it up and toss it in the goodie box. Then, I eyed my PRO-95, and thought, 'what the hell'. Lo and behold, after setting the voltage and polarity switches appropriately, the yellow plug on the 'T' fits snugly, doesn't get loose, and has the requisite 300ma. And, this gem cost me all of 8 or 9 bucks!

I've seen similar adapters at other discount stores like WalMart and the other usual suspects, but none cheaper. For the record, it's branded TriQuest Model 7908, but I'm sure that the Chinese crank these out by the pound with various meaningless brand names.

From: Joe Hathaway
Topic: 5825 Message: 5825

I use Win93 and recently corrected a blank display by using the interface. For what it's worth, I downloaded the scanner contents to Win93 before correcting the problem, and in the Win93 field where the single-digit numeral is displayed when the contrast is normal, there appeared THREE digits, something like 278. I am sorry that I did not attempt to see if the actual data in the box was more than three digits, but this observation may provide a clue to someone more expert than I as to what causes these GRE scanners to go blank.

Hello...

I am using Win95 to program Roanoke (Va.) City/County's trunked radio system. It is a Type IIi Hybrid Smartnet system. The fleetmap shows the blocks as being S4, S4, S4, S4, S0, S0, S0, S0. The program does not have the option of an "S0" block. Would this be the type II portion of the system, or how do I enter this on Win95?

Thanks,

Todd Glendye

Interesting!

The value that comes from the radio is only 8 bits, so you should see something in the range 0 - 255. Win93 only lets you enter values between -3 and 3, but will display ANY value that is in the file (or is downloaded).

I'd presume that the data in the radio's EEPROM was corrupted, and this corrupted value is fed to some sort of DAC that determines the LCD's bias voltage. Seems like a bug in the radio, to me - the firmware isn't checking the values in EEPROM before using them (though this "bug" also lets us change things like frequencies, delay times, etc. outside the radio's "normal" ranges).

My experience with these types of adapters is that they are, well, notoriously crappy. I first used my radioshack DX-398 (a wonderful shortwave radio) with a multi-voltage adapter. Yuck. Introduced a lot of noise and had a definite negative impact on sensitivity. A single-voltage regulated adapter is far better with radio equipment in my experience. But to each his own. I've just found that the all-in-one adapters are the jacks-of-all-trades but the masters of none.

Can't you make all the banks trunked and just program conventional
frequiences?

It's always a conundrum, to which of two identical postings should one
reply!

If you do as we have been told we must, plug the charger cord into the
radio BEFORE plugging the other end into the power source, the radio
will always shut off. But when it starts receiving power, it gives
the Welcome screen, and starts scanning again. If it does not, with
two different chargers from two different power sources, it almost has
to be the polarity of the tips is set wrong, no matter how simple the
instructions may have seemed. Either reverse one and try it, or have
someone else confirm the setting.

If the probem persists, it would seem that Radio Shack owes you a
replacement, because the power jack is wired wrong.

> [Non-text portions of this message have been removed]

Of course, the answer is "No," but why would this be a problem? You MUST always plug the cord into the scanner BEFORE you plug it into a power source, and during that time, however short, the scanner is receiving no power, so it shuts off. Since it comes back on automatically when the power resumes, what is the problem?

(If you are disregarding those instructions, the radio will usually not be harmed, and you usually will not have to take it back for repairs, at least not for dozens of incidents of inserting a hot plug into the radio. It should not be too much trouble to have it repaired every month or so. But even doing it the wrong way, there is a brief moment when the plug tip disconnects one power source and reconnects another, and that no-power moment causes the radio to shut off, then back on.)

Just thought of a reason, so I'll answer myself. One is too far from
the system to pick up the control freq in the trunked mode; thus must
program the radio in conventional mode to scan the system.

I'm totally confused here. I usually just listen to my local stuff which is conventional. I've got this pro 95 and the county next to ours uses some motorola trunking. I've got my 5 trunking frequencies and have put them in with the mode set to MOT. I can hear them talk and at the bottom of the window the MOT:changes from NONE to 38320 It's a 5 digit number and it changes sometimes. What does all this mean? Do I need to program this number in somehow? I've got the win 95 program and I've left the trunk id section blank and just have the 5 frequencies in there. Is this right? I just can't seem to understand all of this.

Topic: 5856 Message: 5857

When the scanner is displaying the number (in your case mostly 5 digits numbers) this is the talkgroup. In conventional modes, each department (fire, police, roads, etc.) all have there own frequencies. In a trunk mode, all of these departments can share the same frequencies and the way to keep the traffic separated is that there are different talkgroups. Each talkgroup for each department. Depending on where you live there is most likely a list somewhere on the internet that has all of the talkgroup numbers such as your "38320" and can convert it to plain english such as "XYZ city police channel 1"
I realize this is a very short version of trunking, but I hope this helps

> I realize this is a very short version of trunking, but I hope this helps

I'd say tat explains it very well. And may I say, you're way ahead of the game for someone who is new to trunking. You're getting traffic from the system, now all you have to do is figure out what agency is on what group ID.

If the system isn't really busy, you can sometimes just monitor for a while and jot some numbers down (if you can't find this info online). Once you get the ID's for what you want to listen to, just program thm in and switch to CLOSED mode and you'll hear only these services.

Happy listening!

You can find info at this page for programming talk group ID's.
http://groups.yahoo.com/group/PRO-95owners/files/ The last section.

Also, your county may have the talk groups text and ID's at this link.
http://www.trunkedradio.net/modules.php?name=TRSDB

It is not very clear the manual, page 38. When Zeromatic is on, the
scanner will stop on the center of the freq. Without it, on a strong
signal, the scanner might stop before center and it will sound
distorted. It works only in Search Banks 2,3,4 & 5.
When scanners first came out, Zeromatic was a feature one of the
manufacturers used. It may have been Regency (now Uniden).

ahhh....I see. Thanks for the reply. So would it be correct to
describe it as saying that when the scanner hits an active signal, it
overshoots it slightly to determine where the strong signal is, and
then goes back to it?

What you are seeing is a talk group ID. This lets you know who is using that group. For example if you see MOT: 38320 that might be fire dispatch, but when it changes to lets say a police dispatch they might have some number ID like MOT: 48380. A great place to look up which ID is used by who is WWW.MONIX.NET or dot com one of the two. It's an Ohio tri state site primarally, but they have links to other sites if you need. If you have a manual they can exsplain more about the ID's, but I think I have done somewhat a good job of exsplaining what they are. Hope this informatin has helped you out with your question.

Does not matter if the "bank" is programmed for trunking. The 95 will go back to priority channel anytime EXCEPT if the current station being received is trunked. Set does not "skip" when receiving trunking, it waits until the conversation is over and then begins checking the priority again.

I have combinations of conventional and trunked all through the set. The one thing I love about it is the ability to keep a priority channel. My Uniden 780 will not let you set priority and trunking at the same time. If the tunking button is pushed, priority goes away on the whole set. On the 95, it will check priority unless the frequency/station being heard is trunked.

I think it would be more likely that it locks onto the zero voltage
point of the discriminator output. That would put it precisely on
frequency. Thus the "zero".
Dick

From: Mike Copeland
Topic: 5873 Message: 5874

It sounds like you are missing a freq or two. When the scanner starts it looks for the control freqs by scanning the freqs programmed in. If the control channel changes the scanner will find the new one pretty quickly....if it is in there. Note: This does not apply in "control channel only" mode.
Mike

If you had waited 4 minutes on the other board where you posted the
same question you would have had your answer.

5879. Firmware Upgrade Location?

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-15 04:49:28 UTC
From: Marty Nissen
Topic: 5879 Message: 5879

I would like to hear from anybody that knows exactly where the pro-93's go when RS sends them in for the upgrade. I'm taking my 93 (ver1.00) to be upgraded to 1.03.

Where do they ship them to? My local RS said #40-0639 in Lansing, MI is where he plans to ship it for the upgrade. I searched some posts here, and heard Texas is the location??
I would like to hear from anybody that has had the firmware upgrade done *Recently*, and how long did it take to get your scanner back? And what should I ask prior to giving them my scanner. I have the extended warranty.

TIA.

Empire Way Suite 7&8 in Lansing will NOT be able to do the upgrade,
they will send it out to the next center... I spoke to the
Dallas/Fort Worth repair center about a month ago and there is one
facility in Conneticut, and one other that I can't remember where,
that is able to do the update... I had a Pro94 customer that wanted
to make a Pro94a out of it... That was the last time I made any
calls for firmware updates about a month or so ago... Your radio
will be gone for a few weeks...

As you know the benefit of trunking is the use of 20 channels (usually some systems more and some less)to choose from you can spread many conversations around the system at the same time and thus have multiplexed repeater system. As the other has stated VC stands for Voice Channel but deeper it means that is the frequency the system as chosen for that particular transmission of the Talk group you are hearing. The next time PTT is pressed in the same TG it will advance the voice channel to the next available channel and not necessarily in a predetermined sequence but based on volume of traffic at that moment. If activity is practically nil it usually follows a sequencial order. The control channels usually have 4 channels to rotate from every 24 hrs. to spead the work load on the repeater evenly.

Most smaller commercial SMR systems have only tower with 20 channels and 1 control channel such as the Motorola SMR system here in Wichita and that control channel stay engaged 24 hrs a day..

Hi,

When making changes to existing scanner settings, is it necessary to download the current settings into win95 and then upload the edited file, or can an edited backup copy just be uploaded and overwrite the existing scanner freqs?

Thanks,

Dave

Good point! If this is your first time, make sure you save what ever is in your scanner to the computer first or you will lose it when you d/l to the scanner. Otherwise, if you are ok with overwriting what ever is in the scanner then go ahead. Think of it as saving a file. If it has the same name the old one will be over written.

I'm always entering stuff into the scanner by hand. Not a lot, but a few things here & there. Because of this, I always download from the scanner first and then I edit that info. If you don't do that, you lose whatever you might have entered since the last upload.

I would be very interested in the info you have. I reside in the Land O Lakes area and most of the talkgroups I have found I cannot identify. Also, the distinction of "east" vs "west" is a bit confusing. Do you have this list in a spreadsheet or an updated W93 file(s)? There is one currently in the file section here that I have downloaded and somewhat modified. Not all talkgroups listed have any activity. Some are just are "dead".

Let me know.

No, they only do wireless phones in TX... If your store clerk fills out the repair ticket in the POS terminal, it will allow him to select the desired repair center... Address and everything needed will be there... You can call the 800-the-shac number and get it as well...

5900. Re: Firmware Upgrade Location?

Marty,

I sent a PRO-93 in for the upgrade. I took the radio to my local shack, who then sent it to the repair center. That repair center sent it to Dallas.

It takes longer, but you do not have to pay shipping. You also need to email Radio shack and get them to send you an email telling you your scanner qualifies for the upgrade. When you send in the scanner you MUST include this email. I was told you could not send your scanner directly to Dallas.

Hope this helps.

Dan

The only "charge indicator" is the fact that your rechargable batteries
get
warm.

All I can think about doing is making sure that the mode is set correctly for the first trunk system you entered, I seem to recall a slight problem with my 049 93 that when I programmed a new system or regular freq's and hit scan the scanner would not lock on to the first edacs system I had in it and I just turned the scanner off and on once again and things worked fine. I do not know if this was a common problem with the 93 but it sure happend to me a few time. Good Luck!!

I just got my Pro 95. I programmed a EDACS system in bank one it worked
great. Then I programmed a Motorola system into a different bank it works
good, but now when I scan the EDACS system all I get is the control channel
no voice channel like before. What did I do wrong? Thanks

Dan

I built a charger stand for my 93 like the one I use for my Motorola MTS2000 and cordless phone- http://pro93.cjb.net

Works good, I like it.

It's probably pin 9 on the 3rd IF amp (IC 6), both radios use the same IC. The 92 has a test point pin for this off pin 9 of the same IC. In fact, nearly all RS scanners us this pin 9. Exceptions; 26, 35, 38, 41 and 46.

All IC's have either a dot off of pin 1 or a noch between pin 1 and
the last pin. Count down the side the dot is on will give you 1
through 8 in this case, 9 is across from 8. If yours has a notch,
then with the notch facing away from you, 1 is on the left away from
you, count down to 8, and nine is across from 8. BTW ground is pin
15, across from 2. Pin 9 is actually called recovered audio.

Ok, I soldered a black wire to ground and a red wire to pin 9.

I have a headphone jack, which wire goes where on the jack.

Here is a diagram on how to count pins on a IC.

I would put a .2mf non-polarized capacitor in series with pin 9 because you want to isolate that pin from inadvertent dc shorting and passing on the ac audio signal to your data slicer or audio card which ever you are using.

On the Pro-95, can you enter text on the fourth line of the display on a non trunked frequency? If so..how?. I am a new owner of a Pro-95 and need all the help I can get!. I have loaded the PC software and have the interface cable as well. Can this be done through the PC?. Thanks in advance for any helpful input.

You are not taking ordinary audio. You are tapping a fragile integrated circuit that needs protection.

You take the pin 9 audio into a capacitor (.2mf) then to a mini-phone plug (they are noticbly smaller than ordinary plugs so you don't mistakenly plug a speaker in to it)then into your data slicer or soundcard.Use shielded audio wire and the center wire goes to the pin/capacitor and shiled is tied to the ground connection of mini-plug.

For a non-trunked bank, the Bank ID shows up on the fourth line. Just give the bank a suitable name and that will show up.

On conventional (non-trunked) channels, the 4th (bottom) line of the
display shows the bank's alpha tag. To program this tag from the
scanner's keypad, see pages 30 and 31 of the manual ("Assigning a
Text Tag to a Bank"). If you want to do it via Win95, fill in the
"Name" field for the bank on the "Channels" tab.

Not just on "non-trunked banks". It also appears when you have
conventional channels programmed into trunked banks.

For example, my local system is MOT-II. I have the system's control
channels, as well as two CHP frequencies (non-trunked) in that bank.
When the CHP talks, the 4th line displays "Santa Clara" (the text
tag for the bank). When I receive trunked transmissions, the 4th
line displays the talk group alpha tag (because my bank is Closed;
if it was Open, I'd see either a programmed alpha tag or a talk group
ID number for IDs that I don't have programmed).

Craig,

mdrdg has responded with two postings advising that you use a slicer
and your computer audio for using this discriminator circuit. You are
not going to get much with the earphones.
Purchase a slicer:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3000895314&category=4671

Hook it up and run the software. I believe the capacitor is in the
DB9 hood.

No, it works fine.

>Also can you put more than one trunking system in a bank?

Sort of. You can put the control channels for multiple Motorola systems (NOT EDACS!!!) in a bank, but the scanner will only listen to one control channel at a time - so you'll only track one system at a time. You might want to do this if you routinely travel between two Motorola systems - where the scanner can only "hear" one of the systems' control channels at any given time.

Subject: [PRO-93_95] Re: Discriminator Tap for the Pro-95
Craig is correct but listen carefully...

In an FM recieving radio such as a scanner the discriminator is where the intelligence of a radio transmission is extracted. At this point it has all audio baseband information from about 30Hz to 3000Hz including CTCSS tones and control tones if present and needed for the radio sub-system. Very low signal in microvolts. It is here where you want to take some of this low-level unprocessed audio from. This signal goes on into a filter system to remove unwanted things such as CTCSS tones and such and then is moved on to the audio amplification process to arrive at the speaker.

Now back to the discriminator point. Since this is an integrated ciruit to have to be sure that anything connected to this pin presents very high impedance. Just connecting a resistors as some people think presents the point with dangerous impedances. By putting .1mf or .2 mf capactior in line with the wire to your external mini-plug you present a high impedance protection to the IC.

At this point it makes no difference electrically if you choose to use a Hamcom interface (data slicer RS-232 TTL0 for your computer or ypou can connect it to the soundcard and with the appropriate software decode the digital signals.

There are quite a bit of arguments regarding using a data slice vs soundcard decoding. Some circle say data slicer method is superior and other swear by soundcard.

I myself prefer the data slicer method but I won't go into detail here but I hope I have helped someone. Feel free to tap me for help in your quest. It really isn't that complicated but can seem overwhelming for those who are not experienced in this sort of thing.

Radio Shack has everything you need to make this mod and build an interface but I recommend buying one. And just for thought Pervisall in Egland makes a Hamcom interface for about 30 dollars that is superb for these applications. It works best for ATCS railroad moitoring and I can get the info where to buy it if you need it.

5939. Re: [PRO-93_95] Discriminator Tap for the Pro-95

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-17 03:55:18 UTC
From: R.S. (Bob) Heuman
Topic: 5907 Message: 5939

The PRO-93 and PRO-95 use the same integrated circuit chip for this sameould
be the same purpose so it should be the same pin on that IC. The changes
between the two seem to be, primarily, in the size of the eeprom that is
used to hold data, rather than in the actual circuitry...

Hey,

If you have the computer, and a programing cable you really should try Don Starr's win95 program. You can do all or what you are trying to do very quickly and easily. You can even pull up win95 twice and copy and paste from one to the other. We are very lucky to have the Don Starrs in the hobby to make life easier, and the hobby more fun.

I'm not sure how common it is, but yes, you can have the whole county on one system. In my area, Steuben County is on an EDACS system. This includes Sheriff, Angola PD & FD, EMS, whatever. Allen County is an APCO-25 Digital system. This includes Sheriff, Ft. Wayne, New Haven. Plans for County fire are in the works...

5943. RE: [PRO-93_95] trunking

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-18 08:28:56 UTC
From: Russell Adams
Topic: 5923 Message: 5943

It is very common for the "operator" of the system to maintain the licenses and the "users" show up nowhere on the licenses or appear not have a license. In many cases a county or the largest city in a county will license a system and then all the cities in that county will be users on that system.

It is also common for cities (or agencies) who previously used frequencies in a conventional system or a smaller trunked system to combine their frequencies for those with other cities to create a wider area system. In this case, if a city decides to move to another system in the area they will take their frequencies with them to the other system.

TXU has a large wide area EDACS system used by several users that are widely dispersed. The system is primarily by TXU for its various operations. However, it it also used by the Texas Dept of Transportation, a medical evac agency, and even a military base.

Anything is possible.

Russell

Radio Shack in the US likely has everything you need, but call the store first to be certain. Radio shack in Canada will likely NOT have a capacitor but MIGHT have the rest of what you need. Again call first to be certain that you are not going to a RS that does not have what you want.

RS is getting out of the parts business here in Canada and going for the big ticket items, such as TVs, Phones, DVD players, computers and accessories for same... or so it seems to me.

Scanners? Only one, and that is a Uniden scanner. NO PRO scanners in sight! Reason, I believe, is that RS Canada would have to pay Industry Canada to test the scanner to get the required TAC for Canada (similar to FCC approval in the US) and does not believe they will get their money back via sales. They are probably right, too, unfortunately. The result is that none of the newer RS scanners will have a TAC, and therefore none will technically be legal in Canada, even if they do not interfere with anything, etc. As I said above, this is my opinion and I cannot prove it. It just fits the facts.

The EEPROM is the same part - it is just more fully utilized in the PRO-95. The differences are in the CPU firmware and the clamping diodes connected to the PC/IF jack.

How did you come up with .2mf? I've seen recommendations ranging from 0.1 to 10 uF. In actuality a capacitor is not needed at all. It does not protect the chip from transients that would occur if the jack tip contact was shorted to ground or the supply voltage. Additionally there is an input capacitor in the data slicer and nothing is gained by putting two capacitors in series. It makes more sense to use a resistor around 10K to limit any fault current, whether transient or steady state. Note also that the IF chip is unfiltered at pin 9 and the signal contains a large amount of high frequency content at twice the IF frequency in addition to the desired audio. A bit more detail can be found on my web page www.ulster.net/~petrow.

Regarding MDT's, the common programs on the web decode only an older protocol that is not in use much any more. I am not aware of programs for the more up to date MDT formats.

Hey cyberEinstein where were you when all these questions were posed so you could inform us all so eloquently???

My choice of cap was from testing in the field on the hardest to decode ATCS and it worked the best. Homeade interface may have a cap in the drawing and maybe not. I figure if your smart enough to attempt to build one yourself you would research it enough to come up with a design from somewhere.

Maybe everyone should not send any questions at all to this board but just simply send them to you and you can answer all for us!!

From: Troy <thefirechief750@yahoo.com>
Topic: 5853 Message: 5949

Pasco is split into two districts. The east side and the west side. The borderline is Highway 41 which starts in gowers corner and runs all the way across to the other side of the county.
In dispatch centers, they are set up with a dispatcher for the east and one for the west. They are addressed as "Pasco" when talking on the radio. The Sheriff office has several sectors. Adam, Baker is west side, Charlie (east of I-75) and David, West of I-75 east of hwy 41. You will here a Sam sector which is the city of san ann and st.leo area.
Pasco Fire had 2 district chiefs (battalion 1, west side and battalion 2 on the east side)
I will fax the info if you are capable. Otherwise, I will get it up on my web page in the next few weeks and post the link on my site.

Do you need the frequencies? They must be programmed in a certain order or your scanner will not work properly. And no, I do not have a file yet. I just founf this web page (had no idea something like this was out there) so I will be working to get this information avail. I wanted to post the msg to see what the demand for this info was and offer the few that wrote the fax of info.

Sorry for the typos. I need to get this info on my web page.

Troy

How unfortunate that if someone presents a point of view that is at all different from yours, you resort to name calling. It is evident that your understanding of the issues is little more than superficial.

The information I posted is just from the MC3361 datasheet, available for anyone who takes the time to search for it. I followed up with oscilloscope measurements to confirm what was in the datasheet.

The capacitor value should be chosen for a low frequency cut off of between 5 Hz and 20 Hz for lowest bit error rate. This information is from an application note by CML microcircuits. The value of the capacitor depends on the input impedance of the data slicer. This is generally determined by the value of the resistor at the input. All of the data slicer circuits I've seen on the web include an input capacitor.

The data slicer issue is probably a bit off topic on this list so I won't belabor it further. It isn't my intention to get caught up in a flame fest, so for me at least, this thread has come to an end.

I apologize to you for being so short and resorting to childish name calling.

99 percent of the intrested parties on a board such as this comprise of people eager to lean and don't have the knowledge yet for what ever the myriad of reasons could be. I offer my knowledge just as you do and countless others on here do but to me one should try to treat everyone visiting here kind abd try not give the appearance intimidate them for their apparent lack of skills and knowledge that they should have if they are going to offer anything. Rather than challeging someones knowledge about any particular matter isn't it kinder if you see something such as my choice of capacitor being a .2mf instead of either what you have read somewhere or done yourself and appearing to be nonconventional asking me what have I discovered that lead me to this choice rather than dragging a data sheet out and quoting verbatim a test that was done under excruciating test circumstances.

I have spent a great deal of gasoline chasing ATCS MCP's data bursts with large error results with various capacitors on the discriminator bringing me much sadness in my efforts.

I built and rebuilt and changed and rechanged till I was blue in the face and with this choice of capacitor I brought my erro rate down to acceptable rates that I now can go out and capture this data with a very resonable amount of confidence making my efforts fruitful. Why the .2 works I haven't a clue but for my hardware configurating it works.

And all of us on this board can use what I have found as an acceptable way to experiment without fear of burning something up if you are careful.

Again I apologize to you and will try to be more careful in my responses. Lets all have fun here.

Apology accepted??

They do the same thing out here in Calif. In the SF bay area Alameda county uses an moto. system and the users are the sheriff's, county fire, several local pd's and their public works depts. and in Sacramento they also share. The county system is used by sheriff's and the city of sac. fire dept. and the city's transit agency uses the county system, while the Sacramento city system is used by the police and the city of west Sacramento, so at least here and I imagine in lots of counties that use the trunk system, they share with other pod's and other agencies.

Well sounds like you need to put the ID's that you only want to listen to in the ID banks and only scan that system in closed mode so with that you will only hear the I'D's you've programed. does this answer help? Alsoyou can lock out the ID banks you do not want to listen to while in the closed mode.

Subject: [PRO-93_95] trunking stuff

Can somebody please tell me how I can program a trunking system into
my pro-95 but only listen to one talkgroup. I have the whole system
in one bank, but I want to have another bank with just one talkgroup.
Thanks!!!!

5961. Newbie questions on the Pro-95

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-19 15:47:14 UTC
From: rifleslug <dtoy@nyc.rr.com>
Topic: 5961 Message: 5961

Hello. I purchase my Pro-95 on Christmas Eve and got a few
questions.

#1: I did not recieved a yellow rechargeable holder. Is this a
standard thing? The manual says yes. But There seems to be
no place for it to be in the box.

#2: For alpha tags. I can only program just the 3rd line. How do I
get it to go to the next line?

#3: Reviewing lockout channels. I have to do that because of
electronic interference from my computer. On my old scanner,
there was a button you press for revewing the above mention.
Now to do that on the 95, seems to be a pain. But unless I'm
doing it wrong, it does not work.

Thanks alot and anyone here from New York City?

5962. some observations

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-19 16:04:54 UTC
From: Tony Marzullo
Topic: 5962 Message: 5962

Just a couple of observations---hit your delete button as needed:

1. When using Win 93 on a computer with Windows NT4 (service pack 6 I think) the progress bar that appears on the screen when uploading/downloading lags behind the progress bar on the scanner but works fine otherwise. The progress bars match up fine when using Win XP Pro.

2. When cloning from scanner to scanner using a simple mono to mono cable, I get some clicking noises from the speaker of the scanners but works fine otherwise.

3. For various reasons, I needed to format my hard drive recently. I reloaded essentially the same programs and set up the computer the way I had it previously but after reinstalling the drivers for the Iogear GUC232A USB/Serial adapter, Win93 now works with Com Port 4---was Com Port 5 previously (I did not add or remove any devices).

Maybe this will help or inform someone.

Cheers

1) You should have recieved a rechargable battery holder as per I did and i bought mine 3 weeks ago and as per the manual.

2)The fourth line is for Bank Tag. This is so you can name the Bank. That the channel is in.

3) To review locked out channels you have to press Manual. Then repeatedly alternate between pressing FUNC and then L/OUT to view each locked out channel. PAGE 46 in the manual.

I had the same problem when I bought my Pro-95, I did not get the yellow battery pack. I went back to RS with my manual in hand and showed the employee that it was to be included with the radio. He gave me one. I agree that there is no place in the box for both battery packs.

One is shipped inside the radio. The other is in a separate cardboard enclosure, at one end of the box (outside the molded paper structure that holds the radio). This assumes, of course, that somebody didn't already grab one of the battery holders from your box.

You can buy it directly from the manufacturer:

www.pfranc.com

There is a bunch of good cable info at:

http://www.pro-92.com/pcifcable.htm

Don's page (which he's already suggested) has the most complete
rundown of cables.

That's because Don pilfered a bunch of it from the PRO-92.com site :)

If buying the cable directly from pfranc.com, make sure you get the
PCL35M - it has a 3.5mm mono plug for direct connection to the scanner.

Craig you have answer all my questions. The 4 line text is a great help. Now I can add more text to the channel tags. And the reviewing lockout part. I did what the manual said, but it did not work for me. I was reading the wrong part, now I see where I went wrong. I was looking at "reviewing locked-out frequencies" not "reviewing the lock-out channels." Last thing. any idea how I can block electronic interference from my PC. I have a small desk and the Pro-95 is 12 inches away.

Most likely a cell phone call image-pretty common on most radios that don't have pre-selectors (found in high-end such as Motolrola line etc).

Subject: [PRO-93_95] Newbie questions on the Pro-95

Hello. I purchase my Pro-95 on Christmas Eve and got a few
questions.

#1: I did not recieved a yellow rechargeable holder. Is this a
standard thing? The manual says yes. But There seems to be
no place for it to be in the box.

#2: For alpha tags. I can only program just the 3rd line. How do I
get it to go to the next line?

#3: Reviewing lockout channels. I have to do that because of
electronic interference from my computer. On my old scanner,
there was a button you press for revewing the above mention.
Now to do that on the 95, seems to be a pain. But unless I'm
doing it wrong, it does not work.

Thanks alot and anyone here from New York City?

If you are monitoring a countywide system and that system also has the local PD, GOV, etc you would put in all frequencies (if) edacs of course you would use the (LCN) method logical channel number I guess it's called, then you would only put the ID's in stored mode that you want to hear. Put the scanner in closed mode and you'd only hear the ID's you stored while in the open mode you'd hear everything that is on the contywide system. Hope this helps?

I might have answered this already, so sorry for repeating. I hope this helps and answers your question. You can put the ID's that you would like to listen to into the sored ID's banks, then put the scanner into closed mode and only listen to the stuff you have programed otherwise you would be in open mode listening to all the countywide system users.

Can somebody please tell me how I can program a trunking system into
my pro-95 but only listen to one talkgroup. I have the whole system
in one bank, but I want to have another bank with just one talkgroup.
Thanks!!!!

EDACS or Motorola trunking?

If EDACS, all of the frequencies, but starting in channel position 1 and
they must be in the correct sequence. If a channel value is skipped, it has
to be skipped in the entry info too.

Mot, just the control channel frequencies...

As far as talk groups are concerned, enter all you are interested in and
then close the bank...

Simple... Assuming it is Motorola, put the frequencies used by the control channels in the 2nd bank, and program in only the one talk group into that bank. Then CLOSE the bank and you will only get the one talk group when you select that bank.

OK, this one has the new guy stumped. I ran across a frequency that I'd like to monitor, but apparently it's at a strange (at least to the PRO-93) spacing. The frequency is 163.8625 and has been verified by numerous sources as a valid frequency. However, Win93 defaults it to 163.8650 and when entered via the keypad it defaults to 163.8600. I'm obviously in need of some serious radio education here, so feel free to pound it into me :-)

Thanks,

Mark

The PRO-93 is rounding off the frequency to 163.8600. However, it doesn't matter; 163.8600 is close enough to 163.8625 that you will still be able to monitor it.

Ken

Topic: 5992 Message: 5992

I am very close to deciding to purchase a Pro-95. My current scanner is an old BC210XL. It only has 18 channels and no 800mhz. A Pro-95 will be a big step up. Is $172.00 a good price?

I live between Cincinnati and Dayton, OH and I really don't know if there are digital systems out there that I won't be able to here with the '95. Does anyone know?

I am going to get a new antenna and I need som advice on a few things. First, which antenna: Radio Shack Discone ($59.99) or Radioware SE1300 ($89.98)? Second, which coax: RG6U or RF-9913? Are there any better choices? The run will be about 75 feet. and finally, I heard somewhere that the older style connectors (PL-259/SO-239) were restrictive of certain frequencies. Is this true? Are the UHF type "N" connectors better?

Any help will be welcomed!!!
Brad

> Is $172.00 a good price?

That is still a very good price for what you are getting... The 95
has been a good sensitive radio thus far... I appears most are very
satisfied with their purchase...

>
> I live between Cincinnati and Dayton, OH and I really don't know
if
> there are digital systems out there that I won't be able to here
with
> the '95. Does anyone know?

The last p95 file I made did not have any digital systems... The new
digital scanners only work with 3600 baud units... As time goes on,
those are being phased out with the 9600 baud units coming in... The
APCO25 units will not track 9600 systems...

> Radio Shack Discone ($59.99) or
> Radioware SE1300 ($89.98)?

Either would be fine... In fact, they may both overload the radio
and your reception will suffer... Might try the stock antenna and
then see what, if any improvements are needed...

> Second, which coax: RG6U or RF-9913?

I use RG6 here... RG6 Quad shield is better if you wish to spend the
money... Your 75 foot run is not much...

> Are the
> UHF type "N" connectors better?

F connector is what I have... You are not going to see a difference
between pl 259 and/or others... They all pass the same
frequencies... Metal on metal...

Hi, well I can answer you question about the purchase of the scanner. Is the $172 price you are paying with tax from Radio Shack? I paid 149 plus good old calf. state sales tax. I have a pro-93 and a 245xlt and the pro-95 is a nice scanner to have around with 1000 channels it works out well here in the SF bay area. The 95 only tracks 2 types of systems (motorola, and edacs) but that is what most public safety systems use. If you decide to buy that scanner it will come with a booklet that will give you a list of trunking systems in the U.S. so you can check to see if The Queen City and Hamilton County are trunked, also if you have a local scanner dealer or ham radio store they might have some local scanner lists that they put together. Also try www.trunkedradio.net I just use an HT antenna so I cant help you much with that but when I had one it was a RS discone which worked ok not the best in my area which is pretty urban with a lot of signals floating around, I liked a vertical scanner antenna I think that worked best for me. With RG8 coax I think it was and the 259 connector with the BNC connector.
Well hope this helps some? Good scanning and enjoy the scanner.

I take it you are in the Moraine or Middletown area. I don't know if they are digital but think they are still 800mhz/ Here are two site I have used in the past....

http://www.ohioscan.com/ it has alot of general stuff as well and may help in your Antenna question. The other is http://www.cityfreq.com:81/oh/

this one is more generalized and sometimes I have found that the freqs posted on this site may be outdated, its trial and error as with alot of info out there.

Matt

$172 is on the high side. But if the sale is over, then there is nothing you an do. Others bought their PRO-95 units a few weeks ago when the sale was on. Yshould not wait for the sale to return. Radio Shack sold the excess inventory like they had planned.

> I live between Cincinnati and Dayton, OH and I really don't know if

Buying a digital scanner at this time is not a good idea unless you know for a fact that your area is going completely digital. The combination of the scanner and card costs around $700, and your radio will be obsolete in a few years when the switch to 9600 becomes popular. If you have the money to spend, then go ahead. It sounds more like you are on a budget.

Don't rush into buying an antenna. First see how the radio works in your area. Because you are moving up to a trunking radio, you are going to be busy enough for a while learning its features without having to worry about antenna issues. The PRO-95 has good sensitivity.

By the way, are you sure that you want a handheld unit? It is rare for a person to switch from using a base unit to a handheld unit with an outdoor antenna. It sounds like your purchase is priced-based. You might want to look into getting the PRO-2053. If you look around, you

can find a brand new one for the same price you will pay for the PRO-95. Check your local dealer and Ebay.

Not only that, but it is much easier to program in the trunking mode than Uniden's 780xlt. Win95 (which is freeware) is a great program and only makes this easier. Don Starr did a terrific job with this program.

Thats a good price, Brad,
Look in the following link for Warren County and Butler County/West Chester Township, both have Motorola Smartnet information which should be useful. You will also find Dayton Smartnet and the unusable (except for the new BC radios) Cincinnati Astro 25 Digital system.
http://www.trunkedradio.net/modules.php?name=TRSDB&action=state&state=OH

The 95 will cover all but the Cincy system, and it appears whichever county your are in, its motorola Type II Smartnet. If you are in Middletown, you should receive both systems with the supplied duck.

is an old BC210XL. It only has 18 channels and no 800mhz. A Pro-95 will be a big step up. Is $172.00 a good price?

I live between Cincinnati and Dayton, OH and I really don't know if there are digital systems out there that I won't be able to here with the '95. Does anyone know?

I am going to get a new antenna and I need som advice on a few things. First, which antenna: Radio Shack Discone ($59.99) or Radioware SE1300 ($89.98)? Second, which coax: RG6U or RF-9913? Are there any better choices? The run will be about 75 feet. and finally, I heard somewhere that the older style connectors (PL-259/SO-239) were restrictive of certain frequencies. Is this true? Are the UHF type "N" connectors better?

Any help will be welcomed!!!<
Brad

hi,

I have a pro-93, I want a speaker/mic for it. obviously not to transmit but
to hear better up on my shoulder. will this work? I just want to plug the
speaker jack in, not the mic jack.

Radio Shack has a "Shoulder" speaker for scanners. Or at least they
used to. It's not on the web site anymore but, you may find one at
your local store.

Here is the info on the one that Radio Shack had. I have one and it works sufficiently well but not as loud as I'd like.
Looks like the old Radio Shack part number on the back was 20-009. I did a scan on EBAY and there is one for sale now.
Here is the link
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3002217247&category=4671
<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3002217247&category=4671
>
If the link doesn't work go to www.ebay.com <http://www.ebay.com/> and in the search line type in scanner speaker.. be the 3rd one down in line.
Hope this helps.
Russ

From: joeylemur <mst3000@hotmail.com>
Topic: 6004 Message: 6004

Hey, I recently got a Pro-93. After finally figuring out how to do the trunk tracking, the instruction manual said that for the Motorola UHF-Lo system, I need the system's base and offset frequencies. I have those, along with the trunking frequencies for a couple of towns. However, the 93 seems to only let me program 1 base and offset frequency per bank. How do I put in mutiple cities/systems into a single bank? Thanks

You'll have to saw or cut the mic plug off...I used to
use this all the time at work...can't find the
speaker/mics I used anymore, though...They were
Motorola. I don't like the RadioShack ones with the
metal clip...it digs into my neck.

DON,
Try either of these. They are an associate store and can extend sales as necessary. They had purchased some at a price that allowed them to extend the sale beyond the normal sale.

I have posted this many times on many lists; please ignore it if it does
not apply here.

The volume from the earphone jack can be doubled, to the full output
available internally, without permanently modifying the PRO93/95. The
earphone jack will still be usable for earphones, also, but the full
output must NEVER be used with an earphone!

Radio Shack sells a cheap shoulder speaker (NOT speaker/mic) with a
coiled cord. It works exceptionally well when the mod is in place:

The volume to the earphone jack is limited by an internal resistor. You
can temporarily defeat (bypass) the resistor by grounding the outer ring
of the jack. Here's how to do i without opening the case: Wrap a short
piece of bare copper wire around the base of the antenna mount (which is
at ground), twist it tight, and leave a one inch pigtail. In the end of
the pigtail, make a small loop the size of the hole in the earphone
jack. The wire should be fashioned so that the loop can be pushed over
the jack hole, or back, out of the way.

When using the earphone, leave the loop out of the way. When using an
external speaker, place the loop over the hole and push the speaker plug
through it into the jack. Voila! Double volume!

Please do not blow out a perfectly good EARDRUM by using the mod with an
earphone!. If this description is not clear, I will be happy to send a
picture; just email me at (deleting both spaces): Joe.Hathaway @ att.net

Topic: 6019 Message: 6021

Joe,

What a neat tip!!
Just tried it with the radio shack speaker you described and my Pro 95.
You're right. The speaker is actually useful now.

Thanks a million!

Russ

6029. Sub-Banks?

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-23 18:23:10 UTC
From: Patrick <plehnherr@mchsi.com>
Topic: 6029 Message: 6029

I'm not quite clear on sub-banks. Are they used only for trunked systems (for talk IDs) or can they be used for conventional frequencies, such as turning off groups of 20 channels with in a bank?

Pat

6030. RE: [PRO-93_95] Sub-Banks?

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-23 18:46:09 UTC
From: Tony Marzullo
Topic: 6029 Message: 6030

The following example uses a Pro-93, the numbers of frequencies/channels and talk groups are different for the Pro-95 but you get the idea.

A BANK is a group of frequencies (on the Pro-93 there's 30 frequencies per bank. There are 10 banks for a total of 300 frequencies or channels).

SUB-BANKS can only be used for trunked system talk group ID's (there are 5 SUB-BANKS per BANK and you can enter a total of 20 talk groups per SUB-BANK for a total of 100 talk groups per BANK or 1000 talk groups total for all banks combined).

The only way to turn off a specific frequency or channel is to lock it out----one at a time. By locking out a BANK, you turn off 30 frequencies/channels at a time---which will also completely turn off the entire trunk system in that bank. You can also lock out individual SUB-BANKS or individual trunked talk groups within a SUB-BANK.

Hope that's not too confusing

Alex,
Most of the choppers used in law enforcement in the Bay Area are capable of using different frequencies and needed by different agencies.
Argus, which is Oakland's chopper is on their trunk system, CHP uses the lowband freq's of 42MHZ range. STARR-ONE used in Contra Costa County uses 155.310, 155.190, 155.250 plus the freq's of the city they are in.
As for air-to air stuff well you can scan the air band to find out freq's they use to talk to traffic control towers and the such.
I am saying basically that the choppers in the Bay Area use multiple freq's and are not set to just one city's freq's. I hope that kind of helps? Oh by the way Eagle uses 44.760 as a main freq for East Bay Regional Parks.

Graig, I haven't opened the 95 to check. Did you find a solder pad or test point away from pin 9 or did you solder directly to pin 9? The 92 has a test point (TP 301) tied to pin 9 which is a perfect place to make the tap.

Frank

Topic: 5907 Message: 6039

I dont think there is a test point in the 95. I soldered directly to pin 9.

Graig, I haven't opened the 95 to check. Did you find a solder pad or
test point away from pin 9 or did you solder directly to pin 9? The
92 has a test point (TP 301) tied to pin 9 which is a perfect place to
make the tap.

Here's a link to a good description of the procedure. The author states that you can make the connection to the circuit board through a 1K resistor or a 1uf capacitor. There seems to be some debate as to this point but I find the argument for using the resistor more compelling as your data slicer will no doubt already have a coupling capacitor at the input. I've seen suggested values for the resistor ranging from 1K to 100K, so some experimentation may be in order. A value of 10K ohms is often mentioned. Best of luck.

6042. FS>> Two PRO-95's

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-25 15:46:40 UTC
From: John Schneider <thecop@optonline.net>
Topic: 6042 Message: 6042

O.K., it's a long story, but I have two PRO-95's for sale:

1- This is the one I have been using. It is in immaculate shape, and the only diiference from a new one would be the piece of shipping tape I put over the plastic display lens to keep it from getting scratched. It will be shipped in it's original packaging with all stock accessories/manuals.
Asking $165.00 + shipping from 11786.

2- This '95 is still in the shipping box as received from Radio Shack (mail order). I have not opened the shipping box, so I can honestly say this scanner is brand new and never used, (or seen!!). I will ship it as it was shipped to me and guarantee it not to be DOA.
Asking $175.00 + shipping from 11786.

Please respond off-list with any questions.

Thank you,
John Schneider, KB2COP

6044. RE: [PRO-93_95] Re: Discriminator Tap for the Pro-95

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-25 19:37:23 UTC
From: Tony Marzullo
Topic: 5907 Message: 6044

You can use it to run the Trunker software which does Pardon the length of this e mail):

With a single scanner connected to a data slicer, the Motorola Trunked Radio System's control channel can be monitored
and interpreted. Data is collected and displayed showing critical operating parameters of the trunking system, such as
whether it is a simulcast or multiple-node configuration, the frequencies being used by the monitored repeater (calculated
automatically for 800 MHz systems (both "normal" and "splinter"
arrangements) and 900 MHz systems, and manually for
other frequency ranges), active group and individual calls, patches between multiple talk groups, and pages between
individual radios.

With the addition of a second scanner, a user can track conversations on trunked systems as they move from frequency to
frequency.
While monitoring the system with the second scanner and watching the display, one can type identifying annotations of talk
groups, multi-group patched calls, and individual radio IDs using Trunker's command menus, and those annotations will be
saved in data files. Along with the text description of the ID, Trunker allows the priority and color to be set while Trunker
is running. By using special values in the color field, it is also possible to have the selected color blink on-and-off for
emphasis, as well as to request a speaker tone or 'beep' be emitted when the group, radio, or multi-group patch is active.
Automatically detect type-II banks within a type-II or Hybrid system based on control channel data, and for identified type-
II banks, interpret the status bits of group calls, provide special handling for emergency calls, and suppress tracking of
encrypted conversations.

Automatically detect the use of a type-II radio within a type-I bank for Type IIi/Hybrid systems.
Allow the user to edit data files to indicate the size code/fleet mapping of type-I banks, and for those banks, displaying both
the originating radio ID (and any annotations) and the Bank, Fleet, and Sub Fleet components of the group ID.
Allow the user to edit data files to establish a system of display colors and monitoring priorities for managing the display
and tracking of active calls, such that certain groups, patches, or radios may be suppressed, others allowed, and yet others
may be allowed to preempt active conversations of a lesser priority. It also allows certain talk groups to be suppressed

unless certain radio IDs are utilizing those talk groups, so that a
county-wide shared channel can be ignored unless
personnel from one's own organization or region are using that talk group.
Allow the user to 'hold' onto an active group call, patched multi-group
call, or individual call to better identify the group or
radio ID, or to avoid missing some interesting traffic.
Allow a user to 'manually' enter a hold for a specific Group ID or
Multi-Group Patch ID, whether or not the ID is active at
the time.
Logging of pages and the groups participating in multi-group patches, both
to a scrolling screen window and (optionally) to
a data file.
Extended logging (optional) of radio affiliations with talk groups to the
screen and optionally to a data file.
Allow the user to edit a data file to provide a customized mapping between a
frequency identifier and actual frequency in
MHz, so that non-standard mappings may be described and UHF/VHF
configurations may be tracked.
Allow the user to identify a special type of trunked radio system that
broadcasts part of the call data as being associated
with the repeater input frequency and part of the call data as associated
with the repeater output frequency (such as the
400MHz system in London, UK and most UHF/VHF systems), providing the mapping
of input to output frequency
identifier, so the two halves of the call data can be processed together and
properly interpreted.
Allow the user to describe the desired operating configuration for Trunker
(and its related programs) via multiple
environment variables or a single environment variable that contains the
name of a file from which it should extract its
settings.
Supports an in-memory database capacity limited only by memory availability.
Changes to the database made with the 'I',
'P', and 'G' commands may be saved to disk with the 's' command or the 'q'
option in the 'esc' sub-menu.

1. Do the discriminator tap mod:
http://miked2000.home.mindspring.com/workbench.htm

2. Get a data slicer
http://www.dataslicers.com/

3. Download Trunker
Program and documentation here (you'll have to cut and paste this address
manually due to word wrap):

Actually I haven't done it either but the features of Trunker are rather neat. I was going to do a "tap" on my Bearcat 245 a few years back because it requires that ALL system frequencies be programmed to monitor a Motorola system. Now that I have a 93, I only need the control channel and the scanner does the rest.

See what you caused with your question Bob. :)

Beside the info provided by Tony, the discriminator tap may also
recover data from the G.E. EDACS data channel, fax data, Morse code,
etc.) If a data stream is unavailable, tune the receiver to an empty
frequency (one that produces just static when the squelch is turned down.

Interesting. I wish it was not a handheld unit. I have enough of them already. If they made a base scanner, I would definitely add it to my collection.

It sure is a long wait for this scanner. November 2003--maybe.

Hello,
Uniden is coming out with a 9600 Digital scanner in December 2003 or January 2004? I am not sure which to buy Uniden or GRE? Any ideas which might be better? what receiving modes does it have? wfm,nfm,am etc...? I currently own a pro-93.
Thanks,
Zach

6062. Re: [PRO-93_95] Trunking Channels

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-27 00:27:19 UTC
From: Gian Mignone
Topic: 5979 Message: 6062

There really isn't a primary dispatch frequency in a trunked system.
All groups on the system use all the frequencies. For the 93 and the
95 you only need to enter the "control channels" and the talkgroup IDs.
The most control channels on a system is usually 4. If you don't know
the control channels for your system, let me know. I'll give you a
couple of links where you may find them.

6064. New poll for PRO-93_95

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-27 18:26:18 UTC
From: PRO-93_95@yahoogroups.com
Topic: 6064 Message: 6064

Enter your vote today! A new poll has been created for the
PRO-93_95 group:

In Win92, 93, and 95, there is a "Load
Text File" option. I'm wondering if
anybody uses this. I want to remove it
to save code space and reduce
maintenance overhead. I'll still keep
the "Save as Text File" option for
printing purposes. Also, I'm thinking
of adding a "CSV" load/save option.

o Yes, kill the "Load Text File" option, I never use it.
o NO!!! Keep it!
o Go ahead and get rid of it, but add the CSV choices.
o I don't care.

To vote, please visit the following web page:

http://groups.yahoo.com/group/PRO-93_95/surveys?id=11031858

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

But you can copy and paste _within_ the application, with multiple
files open. I don't think the copy/paste example gives me enough
reason to keep it...

I won't vote, because I have kind of a selfish interest.

If the text option is deleted from Win92, then I'll have to update
92ware.

So at least keep the option in Win92. :-)

Ken

PS - Is anyone still using 92ware?

The "Load from Text" option never existed in Win92 :)

It _saves_ to text, but trying to open that text file will give you a nice
little "unsupported" message.

Actually, it might make life very hard (for one of us, at least). I'd have to define a format for the CSV file. Since the scanners' data fields are so interdependent, there will have to be a required data structure - kind of makes the idea of a CSV file less appealing.

6074. RE: [PRO-93_95] New poll for PRO-93_95

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-28 00:02:18 UTC
From: Chris's Newgroup Email
Topic: 6064 Message: 6074

Hey,
I won't complaint if you don't do it. If it stays like it does now that still makes life easier. It would be good, but no pressure.

Thanks
Chris

Actually, it might make life very hard (for one of us, at least). I'd have
to define a format for the CSV file. Since the scanners' data fields are so
interdependent, there will have to be a required data structure - kind of
makes the idea of a CSV file less appealing.

Thanks for asking. I feel funny asking for features on software that
has been provided for free. But since you asked, Please Please add the
CSV option. That would make life very easy.

Thanks
Chris

But you can copy and paste _within_ the application, with multiple files open. I don't think the copy/paste example gives me enough reason to keep it...

From: SKIPSTER23 <skipster23@yahoo.com>
Topic: 6076 Message: 6076

I know there are a few members in the Wichita area and hoping to get in touch with them. I live in the Salina area and have quite a few frequencies for the area but was hoping to add to my files. In particular I am looking for Mil Air frequencies that may be in the area. Also if anyone can answer this, Westar (formerly KP&L) has gone to a tunked system, I have the frequencies but are these control frequecies and/or are there any talk groups for these. I have yet to hear any on there so I was just trying to get some input. Thanks and if needed email off group at mhalton@...

6079. Re: [PRO-93_95] New poll for PRO-93_95

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-28 04:25:16 UTC
From: rsh@idirect.com
Topic: 6064 Message: 6079

True, but I do NOT cut and paste inside the application. I dislike doing so, and have for years... Personal preference, but I do it inside Notepad or Wordpad...

The other use I make of the text file is that I post it. I also post the .p95 file. That way others who do NOT have a RS PRO-92, PRO-93 or PRO-95 can see the precise values and talk groups I use and, should they so choose, use those values without re-inventing the wheel. How they use them depends, of course, on what their scanner is capable of, but much of what is in the text file can be used with an ICOM, Uniden or other scanner.

No one can do that sort of easy reuse with the .p95 file, and I an not too certain the comma delimited file will be all that easy to read, if that is the replacement. [Granted someone with a Uniden or ICOM could download the program and use it to read the .p95 file to get the info also, but that too is not as readable as the text output.

I do agree that the text file is LARGE, since it is around 175 kbytes for a PRO-95, but it is easily readable.

As stated in the poll, I'm not even considering removing the ability to
WRITE a text file, just the ability to *READ* it.

It could be a lot of things. Is the dipole tuned for 900 MHz? Are you possibly overloading the 2053 with too much info? Possibly you need to attenuate. Does the dipole perform well for you on other bands on the 2053?

I seam to get all bands with some around 30 miles away. I don't have a SWR meter so I am not sure about the tuned FREQ. I shall try the attenuate the next time I hear a transmision.Could the transmission be to close, about 100 yards, for the 30 ft. high dipole?

Don,

Missed that somehow... Feel free to save the code if that is the case, but I will then have to figure out how to do the cut and paste inside the application. I can do it... I can do it... I can do it...

6085. Manually select a talkgroup on PRO-95?

Yahoo group: PRO-93_95 (2003)
Date: 2003-01-28 13:52:44 UTC
From: kd4kac <kd4kac@hotmail.com>
Topic: 6085 Message: 6085

Looking at purchasing a scanner soon and was considering a Uniden 250D. Looked at the PRO-93 last year but read that you could not manually select an inactive talkgroup to monitor. You had to wait for the talkgroup to become active and then hold it while active. Is this true of the PRO-95?

I will of course be scanning my local police and fire departments but will frequently be wanting to monitor only our Sheriff's Department main dispatch talkgroup, which at times is rather quite. If you cannot hold the radio on an inactive talkgroup I will probably keep looking at the 250D.

Have tried to read previous posts but could not find anything that answered my questions.

Thanks for any help.

Ashley

From: n1pba <n1pba@juno.com>
Topic: 6086 Message: 6086

I just downloaded the newest version of Win95. In the File/Open menu, it no longer seems to allow direct opening/conversion of .p93 files, like the earlier versions did. Am I missing something or did that feature disappear?

(It doesn't matter too much to me--I have a 2053 and a 95, but I can always cut and paste between Win93 and Win95 if I have large changes, since the big need was to program the new 95 when I got it.)

Ed Hennessy

From: fmon1 <fmon@erols.com>
Topic: 6086 Message: 6087

V.07 could not do this either Ed. Don has a program called
WinXXDataConverter.exe that will convert spg, p93 or p95 files to any
of the other two files. This program can be found at
http://www.starrsoft.com/

Don't forget the p93 and 95 files may have only the controls
programmed when converting to spg.

Using two banks is a great way to monitor a specific talkgroup if you have spare banks. Put the Fire/EMS in one bank and Sheriff in another then lockout the undesired bank.

Though you can on the 93 and 95, lockout up to 20 ID's per talkgroup bank (5 total talkgroup banks) by locking out any or all of the talkgroup banks. Thus scanning only the desired talkgroup bank.

If though, you expect digital to be in your area soon, then the additional cost of the 250D may be worth it. But GRE is working on what appears by recent information, to be a better radio for digital scanning.

Verify that you are using the correct comm port Dan, to do this click on Configuration then selcet another comm port then try again. Or it could be that some other program is using the comm port. (Palm is usually using this serial port if you have it in the tray) Try Ctrl Alt Delete to determine if anything may be using the serial port. And last, are you using the correct cable?

>Alt Delete to determine if anything may be using the serial port.

While a good suggestion, this is unlikely. If it were the case, Win95
wouldn't be able to open the COM port (Windows only lets one app open
it at a time), and you'd get an error message like "Unable to open
COM1"

Ah. Well, I haven't gone looking for that feature since I got the 95 and loaded it the same way as the 2053 with Win95, even though I've had copies of most of the versions of Win95. Thanks for telling me.

Maybe Don can update the webpage when he has a chance to reflect the change--that was why I thought the feature was still there in the latest versions.

One advantage I saw was the text version would allow to edit to 12.5hz in high vhf. I haven't tested it to see if it scanned it, but it did allow it be entered and kept it in 4 place settings.

Hi,

Does anybody know if there is a method to up/download from a Mac to a Pro-93. Is it possible to use a USB to Serial cable?

Also, (sorry if this is a newbie question) where are the spec's for programming the Pro-93 located?

Thanks,
Tim

My Comm.. port is right. From your suggestions I might have a wrong cable. It came second hand and I was told it was a two way cable for the Pro 95(serves me right trying to get by cheap). I just ordered one from Blackbagsoftware.com. Is this a good cable? Good price @ $23.00 ?
I hope so, great software can't wait to use it.

Verify that you are using the correct comm port Dan, to do this click on Configuration then selcet another comm port then try again. Or it could be that some other program is using the comm port. (Palm is usually using this serial port if you have it in the tray) Try Ctrl Alt Delete to determine if anything may be using the serial port. And last, are you using the correct cable?

I remember reading on one of these forums of success using a Windows
emulator on a Mac. Unfortunately, I don't remember which forum or
what message.

usb to serial cables work for this on PCs. Don Starr has, on his web
site, a rundown of tests he did.

> Also, (sorry if this is a newbie question) where are the spec's for
programming
> the Pro-93 located?

Programming specs for the 93 are closely held. P93 files are
encrypted, so it would be inappropriate for those who know to divulge
the details.

That 23 buck cable should go both directions if the number on the cylinder is 5,504,864. Don't waist money on their software though.

First off, THANK YOU for all of your work on such a great piece of software!

I would welcome CSV support. With CSV support, it would quite easy to import and export to and from other applications such as spreadsheets and databases. I have never seen importing to or exporting from a standard format file be a bad thing.

Hi Gian and Ken,

I guess I have to invest in Virtual PC. I'm a software engineer by trade as was thinking I could roll my own. That was before I started reading up a little and looked at the screen shots of Win93. Might be more effort than I have time to deal with. But being a software engineer I don't like anything that is closed - have a natural tendency to want to see what is going on down there under the hood.

I haven't even received the radio yet (on its way via UPS), so I don't really know what all these can do. I bought it for NASCAR mostly but after looking into it I see that it can do a whole lot more.

Well thanks for the tips... I guess I should get Virtual PC.

Dan,
I had the same problem initially when programming my Pro-95 with Win95, using the $23 cable from pro95.com

By searching the archives in this and other groups, I found out that I needed to disable/close my Palm Hotsync Manager AND (very important) close my Quicken Download Manager. Both of these programs operate in the background, and must be closed by right-clicking on the icons on the toolbar, then clicking "Close".

This should allow you to upload frequencies to your Pro-95. If not, as suggested by another person, try to change the Com port in the Win95 program to Com4 or Com5.

Good luck. Let us know if this works.

Chris

From: fmon1 <fmon@erols.com>
Topic: 6115 Message: 6116

Use search bank 5 for a limit search, set the low and high end then
press search. Of course the limits have to be in the disigned range
for the scanner.

I saw some of your postings on trunkedradio forum, On Va Beach.

The scanner verify only functions after uploading to scanner, just a recheck that everything loaded properly. I doubt many use it. Great program.

From: emmanate2001 <emmanate2001@yahoo.com>
Topic: 6119 Message: 6119

I am looking for a cable for my PRO-95. Has anyone purchased a cable from blackbagsoftware.com?

If so how was the service, quality, shipping, did you get what you paid for?

I do not have the skills or tools to build my own. Looking for a reliable source.

I forget what the shipping cost were, I purchased a 6 hour Battery Charger also, so that may have made the cost around 5 bucks. I think you can go through checkout without making the pruchase and get the shipping cost.

The batteries hold a charge longer than the green radio shack 1600mAH batteries but preformance should be better, I made the post because, though Tony's posting of the 2000mAH was a great price, I thought the 1800's were a much better deal. I've been using mine for several weeks and the recharge in 6 hours and go back to work as soon as the set in the radio run back down. BTW, MCM shipped immediately.

I'm very pleased so far.

$23 seems a bit steep for the Taiwan-made cable, but it saved me the time it would take to properly build the interface, not to mention parts cost, so it's all good. The cable works wonderfully and they shipped it ultra-fast. Go ahead and order it. I'd love to know what it wholesales for, though. <g>

It doesn't look like you can direct enter a freq. I hit tune and then entered a freq and had to hit enter to get it scanning.

Also from program I tried another way: I hit F(function) and then tone and the freq that was stored in program became the new tune freq. Hope that helps.

Try this:
MANUAL
TUNE
<frequency>
ENTER
<arrow up or down>
PAUSE when you find something interesting

OR...

Take your manual out of the plastic baggie and turn to page 39!!!

Works just fine. I wonder how many people actually read
instructions...
=P

Subject: [PRO-93_95] Re: Programming question

Dan,
I had the same problem initially when programming my Pro-95 with Win95, using the $23 cable from pro95.com

By searching the archives in this and other groups, I found out that I needed to disable/close my Palm Hotsync Manager AND (very important) close my Quicken Download Manager. Both of these programs operate in the background, and must be closed by right-clicking on the icons on the toolbar, then clicking "Close".

This should allow you to upload frequencies to your Pro-95. If not, as suggested by another person, try to change the Com port in the Win95 program to Com4 or Com5.

Good luck. Let us know if this works.

Chris

I Agree, I bought 10 BATTERIES OFF OF THEM AND THEY WORK OUT GREAT. They charged me more for
shipping and handling then the batteries cost. I wonder if this is based on order size or dollar amount of order. It surely shouldn't cost $8.00 for shipping 10 Batteries.

Try $8.00 to ship 8 batteries. I called after the order was placed to request the total amount of shipping & to ask why it wasn't stated on the web-site. They said it is because they charge the actual amount it cost to ship to your door, and most companies do not do it that way. Go figure. I'll just lose their web-site address.

1)Right click then left click and drag back to the left side of the
tag box. (box should be highlighted)
2)Type in your tag, up to 12 characters.

This works in the talkgroup area also.

Or, just click on the cell you want to edit, and start typing. If you click on a cell twice (so that you get the blinking edit cursor) first delete all of the current text before you can type more. This is because an alpha tag must be exactly 12 characters, and Win95 will "beep" at you if you try to type more than that.

Now let me understand, $6.40 for 8 batteries + $8.00 shipping = $14.40
total for 8 batteries. Or buy from Radio Shack for $5.23 each (with
tax in my area) for a total of $41.84 and the latter is 1600mAH while
the other is 1800mAH.

One could have 40 1800mAH batteries shipped to their door for $40.16
Your idea may be ok for you, but I'll keep the web page. I like the
batteries, and in an indurance test the RS 1600's last about 17 hours,
the MCM 1800's have been running for more than 20 hours at the time
this is submitted.

Go figure.

I love these MCM batteries. I bought 44 of the AA and 30 of the AAA.
At that price, even with shipping, it's a fantastic deal.

I also agree with teh great run time. I get a day and a half
continuous (except when sleeping) out of them, and half that time I
run it with teh back light on continuously.

Talk to friends and family and put your orders all together. Then
you'll get the shipping costs down on a per person level.

In the TUNE mode, input your freq, then press PAUSE.
It will display PAUSED and you can hit the up or down
arrow to step through the freqs...

Hope that's what you're looking for...

RTM WOOT!!!
I liked the manual formats RS used for years, like the one for the PRO-43, etc. Those who are adverse to reading the manual definitely need to shell out the $23 for the blackbag cable or go ahead and homebrew one. Gotta love Win95. Since I got my cable, my (dirty/crinkled) manual has been back in it's cozy little baggy.

Thank You , Sir

this is exactly what I was looking for , I don't know why I had to catch so much shit from some in the group. I had read the manual and never could make any sense of what it said. So many other scanners , you just hit manual, input a freq and then search up or down from that freq, using the up or down keys on the scanner. This one was a little different.

I don't know why someone has to make a comment like "You mean I need to read the manual? That wouldn't be any fun, then I would know how to operate it."

and my favorite

"take it out of the bag ????? & get it dirty ??? LOL !!!"

I don't see anything funny in the question I asked
I guess some people can't just be asked a simple question and answer it if they know it, and not say anything ,if they don't!!

I know this will draw comments, but I figured it was my turn now that someone answered my question.

6161. Trunking Operator error

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-02 01:29:54 UTC
From: Dan Zerger <Zergg71@hotmail.com>
Topic: 6161 Message: 6161

Help,

I know I am doing something silly wrong, but I can't figgure it out. I have a 93 and a 95. I am in an area where I do not get to trunk much. I have all the frequencies for the system, Motorolla type 2, Open mode. all programed to moto. All I get is talk groups no audio. It does not matter if the scanner is open or closed. Same result. I do have talk groups programed into the ID scan lists. What small stupid (on my part) thing am I not doing. If I put the scanner into manual and drop one channel below the control channel, I hear the audio and see the talk group. I live away from this system, so I can not tell you what I am doing right now.

Thanks in advance for the help.

Dan

Check to make sure you put the bank into Motorola
mode. Do this by stopping in the bank on any channel.
Press PGM then TRUNK. If it says NOT TRUNKED PRESS
MODE, then press MODE until you get in the Motorola
mode. See if that helps. If not, I have no idea what's
wrong. I don't do much Motorola Trunking...

Do you have both the BANK and the individual channels set to MOT? Both need to be... for it to work in the PRO-95 - and all you need are the control frequencies in the channels, with the talk groups in the talk group portion of the bank. Easiest if you use Don Starr's WIN-95 so you can see what is needed, even if you never use it to load the scanner.

Thanks guys,

I do have the bank and the channels programed for MO. There is a M
in the top right hand corner, as well as on the bottom line every
channel. I did use win95 to program this scanner. If I pressed
manuel it stopped every time on the control channel. If I then
pushed arrow up or down I heard conversation. While scanning I saw
talk groups displayed and did not hear anything. The scanner bank
was in open mode.

I had the same problem with my 93 the first time i programmed it.. the radio drove me crazy for almost a week, doing that exact thing. I was ready to return it as defective until I made the mistake of leaving it run on battery the entire day until it died. I plugged it in to recharge the batteries and the radio came on and acted just as it was supposed to...

No body at RS has been able to explain why this fixed it.

I have a pro-93 any mods to make it trunk Ltr multinet?

6170. Newbie Win95 Programming Question

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-03 01:41:45 UTC
From: twosherrills <twosherrills@yahoo.com>
Topic: 6170 Message: 6170

I just purchased a PRO95 scanner last week, and have been reading all the recent posts on how to program it. I have ordered a cable, and expect it this week to upload a Win95 file I have programmed with the local frequencies. I have searched on this, and have not seen anything specific to answer my question.

My question is this:
Can I have different types of frequencies in the same bank? For example, can I have a MOT and a CONV frequency in the same bank? Will this work? Or do I need to put all CONV frequencies together in a bank separately from all MOT freqencies?

Thnks in advance,
RW Sherrill

Yes, you can put conventional frequencies in the same bank as a Motorola trunked bank.

Yes it will, that is why it is called duel trunking.

It's called DUAL TRUNKING because it tracks Motorola
and EDACS.

6175. Re: [PRO-93_95] Newbie Win95 Programming Question

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-03 05:53:09 UTC
From: rsh@idirect.com
Topic: 6170 Message: 6175

If you look at the toronto.p95 or toronto.txt file in the group I moderate, you will see that I have several banks where I have both MOTorola and CONventional frequencies in the same bank. That works just fine. It also works with EDACS as long as the EDACS frequencies are in the correct order and the correct channel locations, and that there are no MOT frequencies in the same bank with the EDACS frequencies.

You can have one or more MOT groups in one bank, but only one EDACS group in a bank [unless the EDACS groups both use channels that are NEVER the same and that is unlikely - Both are likely to have an 01 even if the rest are all over the map.] You can have FM and/or AM with the MOT or EDACS. You can have more than one MOT in a bank with AM and/or FM.

Talk Groups, however, are only for the MOT and EDACS and if you need to, as I do, you can use the SAME MOT control channel frequencies in two banks, and set up the talk groups in both banks, without overlap of the talk groups. Then if you CLOSE the banks you will only get the correct talk groups in each of the two banks. In my sample, Bank0 is police and Bank1 is fire, and both use the same control channels but well over 100 talk groups...

Hope this helps...

This is a big pain.

I believe the only way you can listen in is to program all freq.'s as conventional NFM and put up with the chirps every couple of seconds. (At least that's what I do)

Thank God!

I have been trying to program an old Radio Shack base scanner for a friend of mine now for a couple of weeks. He lives more than an hour from my house and the scanner can not hold a memory once unplugged for more than an hour. I had to go to his house and program it on site. If he looses power, all my work is for naught!

While trying to download from my 95 to Win95 (Pentium III/700) I repeatedly received a "Timed out" message. It said that I was about 50 bytes shy of being successful. Eventually, I closed all but one channel on the scanner and the process worked. Is this a common problem or just something peculiar to my PC/scanner?

Thanks,
Greg

You didn't mention the model, Jim, some of the older scanners had a 9v
battery to maintain memory for longer periods of power loss.

Putting Trunked and conventional frequencies all in the same bank will not cause any problems. However just for your information it will cause problems if you mix 2 types of trunked frequencies together. I hope this helped you out. Happy scanning.

If you are scanning a motorola type 1 or 2 or an EDACS
then you have to have the bank set for that. If all
the freqs in the bank are conventional, then just Conv
is fine.

That's not a "label". The Conv vs. MOT vs. EDACS setting determines a bank's receive mode. If you have a Motorola system in a bank, you must set the Type to MOT. If you have an EDACS system in a bank, you must set the type to EDACS.

Conventional frequencies are not affected by the bank Type setting.

Are you using win 95 to program your scanner? It is the best way to go. To answer your question, you can label the bank any way you want, but be sure to chose MOT with the mode key for your frequency that are trunked and FM for non trunked frequency. Then close the bank and open the sub bank with your talk group I.D.'s now you can hear both conventional and MOT on the same bank. The Win95 free download makes this so much easier.

Yes, the Purple Computing cable (which is what you have - you purchased it
from a reseller) works with the PRO-92 (and 2067, 93, 2053, and 95).

Subject: [PRO-93_95] Is the Pro95 PC Cable Compatible with the Pro92

I use Win95 to program my Pro-95 using the Black Bag Software serial
port cable (the one with "barrel" about 4 inches from the PC connector).
Is this cable compatible with the Pro92 and the Win92 software? Can I
use the same cable or do I need another one for the Pro92?

Thanks,
Russell

Don,

Thanks, it works great. I didn't want to find out by fizzling it. I
am using Win95 and the 0.38 beta of Win92. Great software dude. Keep
up the good work. Ever think of venturing into the BC245, BC760 area??
Your software is very is easy to use. I do upload/upload and not so
much remote control, although that would be interesting.

Thanks,
Russell

Yes but you forgot to mention that you have to put it in EDACS mode for EDACS frequencies. So you CAN NOT just label it anyway you want. It has to be programed inconcordance with the right type also.
-Mike Brown FF. Ludlow Falls FD-

aabuenaven@... wrote:Are you using win 95 to program your scanner? It is the best way to go. To
answer your question, you can label the bank any way you want, but be sure to
chose MOT with the mode key for your frequency that are trunked and FM for
non trunked frequency. Then close the bank and open the sub bank with your
talk group I.D.'s now you can hear both conventional and MOT on the same
bank. The Win95 free download makes this so much easier.

Don't confuse the bank "label" with the bank "type". The "type" is either Conventional, Motorola, or EDACS. The "label" is just a 12-character text value that you can use to name the bank.

You must set the type to match whatever trunking system you're programming into the bank, but you CAN "just label it any way you want".

It shows as RSU part number of 10557882 ... I would suggest you call 1-800-the-shac (1-800-843-7422) and see if you can get someone to personally tell you there is or is not a substitution for that... I am currently at home without my handy order program to see if its avaliable... This part number is also used in the Pro-2022, Pro-2024 as well as the Pro-2006... It shows a COIL,DETECTOR 455KHZ as its use... Second option is to call GRE customer service and see if they have something close they are now using... They may also have you send it directly to them for service bypassing the R/S repair centers... Their website is www.greamerica.com ... Hope this helps...

6209. New versions of Win92, Win93, and Win95

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-07 01:56:08 UTC
From: Don Starr
Topic: 6209 Message: 6209

I just published new versions of these apps. For Win92, the enhancements are now part of the main release (no longer a beta version).

For all three applications, I've added the following:
* the programs can now determine whether or not the scanner is connected. If you've selected the wrong COM port, are using a bad cable, or the scanner is not powered ON, then read and write operations will fail with an error message. (IMPORTANT: If you are using a one-way cable, do not download this version - your uploads to the scanner will fail!)
* Added a Bank Editor function, accessed via the Edit menu or by pressing ALT-B. This new function allows you to Move, Copy, and Clear banks quickly without using copy/paste.

Another great job Don, thank you. Just one idea I thought might help. I have two cables for my 4 93/2053 scanners. I thought they were both two way but the one doesn't seem to be (it is from a Icom radio).

I was wondering if there was a way to add a switch to Win93 that would disable or enable the check so that both cables could be used with the same software and not have to keep two versions around depending on what cable I grab?

Not something that would need to be done right away, just thought if it was a idea worth the effort you might think about it next time you are doing something with the software.

Again, thanks for all your work

Mike

---> Here is my reply to what Don Starr wrote 2/6/2003 10:00:31 PM

Yes it does, I have the adapter on it and it has worked fine but with
the latest version I get a error message, it starts to load but then
stops and gives the error message, I have tried to turn the extra time
on also,

not really a big deal, would be just nice to be able to turn the warning off so I could use one version with both cables

---------- Original Message -----------

Does the Icom cable end in a stereo plug? If so, try a stereo-mono adapter.

Subject: [PRO-93_95] New vesion of Win93 (and Win95)

Another great job Don, thank you. Just one idea I thought might help. I
have two cables for my 4 93/2053 scanners. I thought they were both two
way but the one doesn't seem to be (it is from a Icom radio).

I was wondering if there was a way to add a switch to Win93 that would
disable or enable the check so that both cables could be used with the
same software and not have to keep two versions around depending on what
cable I grab?

Not something that would need to be done right away, just thought if it
was a idea worth the effort you might think about it next time you are
doing something with the software.

Again, thanks for all your work

Mike

Is there a nice website for downloading P93 files for your area, and other areas you may be visiting? I saw there were a few in the groups file section, but not a whole lot. If not, we should all upload our area, and try to get others. I am mainly looking for San Diego area right now.

New revision to all three apps:

* Added the ability to enable or disable the "serial readback" function
that was added the previous release. If you use a one-way cable or
another cable that gives you a "readback error", uncheck the new box
in the Serial Configuration window (Configuration -> Serial).
* Added another copy test in the Bank Editor, so that you cannot copy to
a bank that is already being copied to another bank. For example, if
you are already copying Bank 0 to Bank 3, you cannot copy Bank 5 to
Bank 0. This is because the ordering of the copies may yield unexpected
results (in this example, the copy from Bank 5 to Bank 0 may happen
before or after the copy from Bank 0 to Bank 3, so you won't know what
will be placed in Bank 3).

Arrrggh.

It appears that I've broken Win93 and Win95 - the serial configuration functions are dead.

I've updated the web site (as of 08:37 PST) - but did not change the version numbers. If you downloaded Win93 v00.29 or Win95 v00.12, you'll need to go get them again.

Just wanted to add (for what it's worth) that due to the changes to the read / write to the serial port, I no longer need to use the "Extra Write Time" option while using my TrippLite USB to Serial adapter. :-)

*

Thanks Don!

One suggestion (this is not a big deal, maybe in a future version update)..

Is it possible to add the ability to have the scanner come back with the backlight turned on (the same a pressing and holding the backlight button for a few seconds, thus turning it on constantly) and stay on after uploading data to the scanner?

Marty

It seems my readback test, even though you can turn off the error message in the latest versions, results in incredibly slow uploads if you're using a one-way cable (or another cable that doesn't echo the data back to the PC).

The uploads still work, they just take way too long.

I'll have new versions of all three apps later today, and will post another message here when they're done.

This Digest was full of messages thanking Don Starr for all that he does for us PROfessional scannists. When Win93 was introduced, there were many of us who said "thank you" to Don in hard cash, sent via PayPal to

"Don Starr" <don@...>

I suspect that most of the donations (and they are donations; Don has never solicited negotiable feedback) were in the $5 to $10 range, but if you use one of his free programs, you know it's worth far more than that. Typically, Don used that sudden cash to buy many different USB-to-serial devices, to ensure that the programs would work with them.

In other words, if you use it, why not say THANK YOU, DON! in a tangible manner?

I just confirmed this is a disco'd part with absolutely no replacement... Pretty sad for a $2.89 part plus shipping, thus making a 200 dollar item junk... If you can find an old radio that was dropped and/or parts radios, I'd jump on it if its cheap... That item isn't something that blows out on a regular basis...

Oh yea... Anything from solder flux residue to simple dirt and
dust... First off, be very careful if you open the unit... It will
void any warranty you have if detected by repair centers... Second,
a can of aerosol air may do what you need...
Believe it or not, RCA satellite receivers are made in a very hot
environment (Mexico) where people sweat, this sweat drips into the
circuit boards... Once it dries, its flakes into something almost
like dandruff... Small white crystal pieces that break free from the
boards...

Considering there are plenty of almost new radios out there with warranties and extended warranties, this could get expensive for Radio Shack. They'll have to give out replacement radios. But I won't blame _them_; when a vendor drops a part, manufacturers and warrantors are stuck somewhere without a paddle, as the saying goes.

To expand on the previous response...

Whenever you upload to the scanner, the entire memory image is written (this is a function of the scanner, not of any external software).

The only way to take a scanner and update only one bank is to edit that bank within an image of the scanner's memory, then upload that changed image to the scanner. There are two ways to accomplish this:
1. Download from the scanner, edit the desired bank, upload to scanner.
2. If you have a P95 file that represents the current contents of the scanner, then open that file within Win95, edit the desired bank, upload to scanner.

From: ffl54 <rhavedx@aol.com>
Topic: 6246 Message: 6246

I purchased my Pro 95 in October and have been programming by manually entering frequencies. I have been reading this groups writtings on the Win 95 program and the program cables available and finally bought a cable and downloaded the program. I am not a computer genius in any way but this is the only way to go, in less than 5 min. of fumbling around even I can program the Pro 95. My profound thanks to Don Starr for this program it takes a good scanner to the next level and makes scanner programming an enjoyable event. If you are thinking about purchasing a cable and trying the Win 95 program, don't wait, do it today. THANKS DON!

6249. Standard PL ? CTCSS Codes ?

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-09 16:37:29 UTC
From: sixstring563 <sixstring563@yahoo.com>
Topic: 6249 Message: 6249

Hi being a relative newbie to monitoring, figuring out all of the acronyms can be as difficult as programming my Pro-95 without using the cool win95 program by Don Starr.

In that spirit, I am trying to monitor MSP (Maryland State Police) and have found some links to very good Freq lists on the Capitol Hill Monitors page. I also believe that I found out by reading the archives of this group that monitoring MSP may require a better VHF-Lo Antenna than the stock Antenna on the Pro-95 ?

The Freq List for MSP also mention something called CTCSS Codes and PL Codes. What does this mean ? I have checked my copy of the SAFD (Scanner Acronyms for Dummies -- :-)) but I can not find out what these terms mean, and was wondering if I would need to program them into the pro-95 to get MSP ?

Thanks,

6250. Re: [PRO-93_95] Standard PL ? CTCSS Codes ?

Yahoo group: PRO-93_95 (2003)

CTCSS = Continuous Tone Coded Squelch System
PL = Private Line(GEs trade name for ctcss)
CTCSS is a subaudible tone sent by the transmitter to
unlock the squelch on radios programmed with the same
tone. For example: I company ABC and company XYZ share
the same frequency, withoutCTCSS, people in both
companies would hear the transmissions from both
companies. But with CTCSS, the people at ABC would
only hear the transmissions from their company. They
could however monitor the calls to XYZ also. and
vice-versa.
Hope this helps

Here is a pretty detailed explanation--if you read the first half it'll give
you more than enough info.

BTW--the Pro 93-95 does not have CTCSS/PL capability.

- after no real joy on finding a nice but inexpensive case for my Pro-95, i decided to dig through some of my hobby stuff... after a little bit, i came up with a very inexpensive custom solution that cost less than $1 for hardware (4 brass leather screw studs)...

http://www.tux.org/~bball/scan/p95front.jpeg
http://www.tux.org/~bball/scan/p95back.jpeg
http://www.tux.org/~bball/scan/p95store.jpeg

- the case works! the belt clip is still available for use, and the scanner face can be protected when inserted backwards...

- hope this helps anyone looking for a pro-95 case (i don't understand why manufacturers don't/can't/won't include simple padded protection for their products)...

On the main page where you set up your primary frequency and set your WX station, down the page are some boxes where you determine what shows. If you select correctly you will see the alpha for your channels and for your talk groups...

Actually, GE called this feature (CTCSS) Channel Guard (CG) not Private Guard. You are correct that Motorola called it PL. I have several GE radios still and all of them call it CG.

Mitchell,

Yes, PLUS you have to go into the bank and on the right, where you enter the talk groups, you have to enter the alpha information and then put a check mark in the box for each group of 20 alpha tags you want to have displayed. By selecting the 5 different groups of 20 you can fill out as many of the 100 talk groups as you need for the bank. If you do not put that check mark in for each one you want, you will never get the alpha tags to show for the talk groups.

From: Chris Pohlad-Thomas
Topic: 6209 Message: 6264

One question I had, and it isn't a program question per se, but more of a trunk system question. I noticed one of the p95 files that someone uploaded for my area (Roanoke, VA) has the frequencies split up by area. When I am at Trunkedradio.net all of the frequencies are grouped together. Does trunkedradio.net just put them all together or is it common for the frequencies to be split like that. I am just used to seeing them all together as opposed to separate and wanted to make sure I understood why that was.

Thanks,
Chris

From: Mitchell Ryan
Topic: 6266 Message: 6266

Thanks,
My problem was that I didn't change the Rx value from FM to MOT.
Once I did that it worked.
thanks for helping out the newbie!

I agree Chris,

I opened that file and it appears Bank 1 and 5 are unnecessary. I like the rest of them though. We run up to that beautiful area (Peaks of Otter and others) often from the Virginia coast.

Your question pointed me to an otherwise good file.

Where did you find this file? Once my cable comes in, I can post some Roanoke area frequencies.. This includes Salem, Roanoke Regional Airport and the Roanoke trunking system. That Lynchburg EDACS system intrigues me, as I have not needed to program an EDACS system yet.

We were running in the wrong feed with this topic.

You pointed to this file in your response previous to mine. It's in the files under P95. CentralVARoa.p95.

I'm not sure if the authors bank 6 on Bedford is correct, TRS list the freqs in a different LCN order. Also if you open TRS Central Planning District Public Safety System for Lynchburg, you will find nearby county EDACS systems. The system is Wide Area EDACS, if you can scan them let me know.

Thanks

Frank

yeah, that file has the trunk frequencies for Roanoke City/County split up amongst numerous banks, but I think the system is for the entire area (which also includes Vinton). In my scanner I have all of the frequencies in one bank and then program in the IDs I want to hear. I don't know for sure if it will work with the frequencies split up amongst different banks since they are all the same system.

Whats the price?

I have one for the 37, 92, 2045 and 2052. The most expensive was
about 23 bucks while the cheapest was the 2052 at 2.99.

Anyway, if you need it, get it.

I have the service manual and it is just a 14 page addendum to the PRO-93 service manual. If I recall correctly, it cost about $4 but you will need to buy the PRO-93 manual as well if you want complete information. The addendum just shows the differences betwen the two radios. As you might expect, the RF board is the same for both radios and the few differences that exist are on the logic board.

Once you are logged in and sitting at the main club page, you should
see a link that is simply called "files" on the left side... It
should be self explanitory after you get in there...

Due to FCC rules re blocking of cell phone frequencies, the various manufacturers have tightly controlled their service manuals since the mid-1990s. You likely will find that ANY radio that covers the blocked frequencies will NOT have its service manual available to anyone but an authorised repair facility, which in the case of RS is its own repair facility. GRE, as far as I know, will NOT repair any GRE manufactured RS Scanner, if it has RS on it.

Thus I suspect you will NOT be able to buy the manual...

There is a converter program at Don Starr's web site that will do the conversion, but you will lose any channels over the first 30 in each bank, as the PRO-95 has 100 per bank and the PRO-93 has 30 per bank, if memory serves. You may need to take on bank from the .p95 file and split it into 3 or more banks in the .p93 file... or cut and paste from a .txt version of the .p95 file to get exactly what you want/need.

When you click on this link: http://groups.yahoo.com/group/PRO-93_95/ you should end up on the Yahoo Group homepage for the PRO-93_95 group. The links to the various sections will not be "active" until you sign in to yahoo (with your Yahoo user name and password) using the link on the upper right side or middle. Once you sign in to Yahoo, the links will become "active" and you should have access to the files section.

I thought CPD and the rest of clevelands' city
services went digital back in '95 or so.

The Pro92 and 2052 radios were both manufactured after the mid 90's,
my manuals were ordered in June and July last year for these radios.

I doubt concern for blocked cell mods are a reason. Though when
ordering a manual for the 2050, I was advised of restrictions (with no
further comment).

[snip]

I had no problem ordering service manuals for the PRO-64 and PRO-92.

About a year after I bought the PRO-64 manual, I ordered a second one for a friend in Canada, where the manuals can't be ordered. Rather than getting a nice printed one, they sent a Xerox copy. (A very good copy, but a Xerox nonetheless.) So they'll supply them even when out of stock.

I believe that they did restrict sales of service manuals for some of the early blocked scanners - the ones where cell blocking was slapped on and could be easily removed. That led some RS salespeople to think the restriction was on all service manuals - but I don't think that issue was any worse than general "drone-ism".

Ken

6296. Polaroid Camera Cable Question

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-11 18:35:37 UTC
From: C Gutta
Topic: 6296 Message: 6296

Hello all. I am new to the group and glad things like this exist. I just picked up my first PRO-93 at RS for 119.97.

My question is this? I have a camera cable from an old Polaroid PDC 640 (dont quote me on the model number). It looks just like the Casio camera cable I have seen online that you can use with the adapters. Does anyone know if this cable will work.

I would like to get some input before I mess up my new scanner.

Thanks.

OK, I am very new to the hobbie. I have owned a Uniden bc 150 for about 3 years. I never had to make these type of settings on that scanner.

How do I know if its FM or AM...what mode should I choose. Nothing around here I am trying to listen to is trunked because I followed it on my not trunked scanner before...but it seems I am not receiving some channels I have programmed in my new PRO-93. So can somebody please explain how I know what mode each frequency is?

Thank you

Most of the public service stuff will be FM. The air band will be AM as
well as the CB band.

Also, MOT and ED are for trunked systems. I don't think they can be
seen on a conventional channel.
When you push MODE on a conventional channel, AM or FM appear in the
upper right of the display.

You can't have more than one "active" system in the bank at the same time. So, if you can hear two or in your case three control channels at the same time, it won't work.

From: Robert Bencsko
Topic: 6308 Message: 6311

You can have multiple MOT in the same bank. All you have to do is have all of the frequencies listed for all of the MOT groupings. Then just list all of the proper Trunk ID codes with Alpha tags on the right side (in WIN95). You can select different trunk banks and I would suggest a separate bank per/service that you are trying to listen to. This is also helpful to be able to turn off a Trunk Bank if you don't want to listen to them for awhile.

You CAN NOT MIX Mot and EDACS on the same bank. Having EDACS on bank 9 is good, EDACS frequencies have to be listed in order from channel #1. I am not sure but I don't think you could put 2 EDACS on one bank because they are very specific as to channel placement.

I posted a file LVLocal for the Las Vegas local freq.'s that I use. Check it out and look at bank 2, Henderson and Las Vegas/Clark County Fire share.

I am the happy owner of a pro-93 and would love to have a pro-95. I live in an area that has lots of trunking activity.

Does anyone know of a ROM ver issue with the pro-95 like there was with the pro-93.

Would any new pro-95 have as good a chance of working as another?

The pro-93 had some kind of addressing problem on certain memory addresses with ROM ver 1.0 and I had to go back an get ver 1.02 I think.
Anybody heard of a problem like that on the pro-95.

Also does anyone know of any RShacks still having the pro-95 on sale?

Many Thanks, Ron Jones

I will be driving through West Virginia, Virginia, and North Carolina
next week on the interstates.

Will someone post the P93 files or point me to the frequencies used
by these state police departments?

I appreciate it.

SC

For Virginia, Plug in
159.000
158.985
159.165
159.135
154.665 Car to Car
154.695 Car to Car
All are state wide, the upper 4 are dispatch to unit and back with extenders used. Offsets are available for the various Troop headquarters, but you should not have any problem without them. What interstate are you planing, 77 or 81? Depending on your route, I may have a file made for VA and WV.

Other than I64/77 toll road, WV is mostly on VHF low, as is a lot of the Carolina SP.

You can have multiple MOT in the same bank. All you have to do is have all of the frequencies listed for all of the MOT groupings. Then just list all of the proper Trunk ID codes with Alpha tags on the right side (in WIN95). You can select different trunk banks and I would suggest a separate bank per/service that you are trying to listen to. This is also helpful to be able to turn off a Trunk Bank if you don't want to listen to them for awhile.

You CAN NOT MIX Mot and EDACS on the same bank. Having EDACS on bank 9 is good, EDACS frequencies have to be listed in order from channel #1. I am not sure but I don't think you could put 2 EDACS on one bank because they are very specific as to channel placement.

I posted a file LVLocal for the Las Vegas local freq.'s that I use. Check it out and look at bank 2, Henderson and Las Vegas/Clark County Fire share.

Subject: [PRO-93_95] MOT and EDACS Trunking

I have three Motorola Systems in Bank 8
1-NYC MTA - All Type II
2-NYC EMS - Custom Fleet MAp
3-Con EDison - " "

They all have different fleet maps. I am using WIN95. How do I get they too all work together in the same bank.

I also have a EDACS system in bank 9. The bank and freq. are all set to EDACS. and the Ssytem ids dont come up right.

If anyone can help that would be great. Thanks

>with the pro-93.

No, the version 1.00 of the PRO-95 started from the version 1.03 of the
PRO-93. There is only the one version - 1.00

>Would any new pro-95 have as good a chance of working as another?

Yes

>The pro-93 had some kind of addressing problem on certain memory
>addresses with ROM ver 1.0 and I had to go back an get ver 1.02 I
>think. Anybody heard of a problem like that on the pro-95.

No, for the same reason... Its ROM, etc., design started with the lastest
from the PRO-93

>Also does anyone know of any RShacks still having the pro-95 on sale?

I am not in the US so cannot answer this one.... I also do not know if the
same scanner, with a different brand name, is on sale elsewhere in the
world. Since GRE makes them, and they DO sell to others, it is possible.
Is anyone aware of that actually happening?

It is possible to have both EDACS and MOT on the same Bank. However you can not Listen to them at the same time. I have Riverside's Santa Rosa Peak EDACS on 701-704 and Camp Pendelton MOT on 721 to 729. When at home I have the bank set for EDACS then when I'm in Oceanside I switch the bank over to MOT. And the text tag works for the system listening to.

Try these for NCHP and WVa. State Police.

NCHP frequencies can be found @ the following link:
http://www.co.rowan.nc.us/telcom/ScannerLists/highway.htm

WVa state police frequencies are below.

WVa St PD 42.10000 FM D
WVSP CAR-CAR 42.34000 FM D
WVa St PD 75.86000 FM D
WVa St PD 75.88000 FM D
WVa PD SIRS 39.98000 FM D
WVa St PD 37.36000 FM D L
WVa St PD 39.48000 FM D
WVa St PD 42.02000 FM D
WVa St PD 42.04000 FM D
WVa St PD 42.06000 FM D
WVa St PD 42.12000 FM D
WVa St PD 42.26000 FM D

I have heard traffic on both systems while traveling- but someone else in this group may be able to confirm the frequencies or add to it a little better than I am able. I live in VA- Frank gave a good list for the VSP. Also in Va., try the Police Interagency channel 39.540 (S.I.R.S.).

6326. For-Sale: Unique, One of a kind Pro-95/93

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-17 05:35:35 UTC
From: Chris J Knight <ckjala@yahoo.com>
Topic: 6326 Message: 6326

I call it one of a kind, because it is. Here's the short:
Last year I was having some trouble with my Pro-93, so I sent it in for service. I figured they would correct the problem and upgrade the firmware, which did correct the issues. When I got it back I noticed it was the same pro-93 I had sent, but I quickly discovered that it had 700 more channels than it did before. Guess I got more than just a firmware upgrade. It's basically a Pro-93 with 1000 channels. Or it's a Pro-95 in a Pro-93 case. Never the less, it's one of a kind. And I love it.
But now unfortunately I'm in a very tight situation. I lost my job 4 months ago, my wife was in a severe car accident last week and cannot work for a while and we don't have medical insurance. So I am in desperate need of cash. Otherwise I would not sell this gem. It's in excellent condition; works like a champ and best of all, there's no other like it in the world. (Unless this has happened to someone else, who for that matter, I don't think the tech kept his job too long) This is the scanner collectors dream conversation piece. It was/is for me
I'll even throw in the soft leather case and an extra (black) battery case holder.
If interested, please make offer. I'm hoping it will go fast (to best offer).
Thanks
Ckjala@...

Below is a link to a picture of the scanner. (In the photo section of this site)

In Alcholics Anonymous, they teach that one definition of insanity is
"Trying the same thing repeatedly, hoping for different results."

Here are two alternate things to try, instead of clicking on each link
in your email:

1. If you have set your line length such that the emailed link
appears on two lines, and you click on the colored first line, you are
obviously clicking on a truncated (incorrect) link. Instead,
highlight the first line, copy it, and paste it into your browser
address blank. Then, highlight and copy the second line, and past it
(with no space) to the right of the previously-pasted half. You now
have a complete URL; click Go.

2. If the above does not work, go to the home page of the group,
click on Files, and enjoy all those files waiting for you there, to
which you previously have been denied acess!

6332. Pro-93/2053/95 vs. BC780XLT

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-17 19:33:10 UTC
From: Greg Davis <biologyprof@cs.com>
Topic: 6332 Message: 6332

I have a Pro-93, Pro-2053, Pro-95, and a Pro-2050 (looking for a buyer for this one, considering eBay). I've become interested in the BC780XLT. It seems that I've read somewhere that except for the squelch tones the Pro-95 does the same work as the BC780XLT. So, does anyone have any experience with the 780XLT and care to offer a comment or two to help me to determine if such a purchase is in the near future?

Thanks,
Greg

If any similiarity exist with the 780xlt it would be the 2067 and 92, not the 95. They like the 780 track Mot, EDACS and LTR. The three also have PL. The two new D Unidens also have all of the above features for a few bucks more than the 780.

I have the PRO-95 and the 780XLT in my collection. The 780XLT does
far more than any of the models you listed below. You should sell the
PRO-93 and the PRO-2050 to eliminate some of the redundancy.

Subject: Re: State Police freqs for WV, VA, and NC?

Kevin,

I have uploaded to the Pro-95 folder the three states listings for
State PD. And appreciation to Todd for his great North Carolina page.
If your trip sends you on the Turnpike, I've added frequencies heard
by WVA Highway Patrol on the Turnpike.

Frank

6339. Pro-2067 or Pro-95

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-18 02:12:20 UTC
From: s1099 <s1099@yahoo.com>
Topic: 6339 Message: 6339

Can anyone offer some insight on the Pro-2067? I am considering a purchase of the Pro-95 or Pro-2067. I would prefer a mobile (as opposed to a handheld), but only if the Pro-2067 is fairly comprable in terms of quality.

Thanks

The 2067 is a nice radio, however!!! Its not a good EDACS
scanner... Its slow to pick up conversations... I really don't
think its as sensitive as my 2046 and a far cry from the 95...

6343. Handheld Scanner Holder

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-18 07:11:24 UTC
From: Russell Adams
Topic: 6343 Message: 6343

Anybody know where I find a handheld scanner holder or bracket. I'm looking for one that has a holder or vise like platform on top of a post that can be swiveled. I need a way to hold my Pro95 in the car up off the console but out of the way.

Thanks,
Russell

Depending on if you need PL/DPL and LTR trunking and
if you need more than 500 channels. If you don't need
PL/DPL or LTR Trunking, the PRO-95 is great. If you
need PL/DPL, LTR Trunking and don't need more than 500
channels, the PRO-2067 is decent enough. I'd go with
the 95 myself, but that's me...

I think that the 95 has better sensitivity...

6345. PRO-93 P/S Connector noise while on

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-18 09:21:02 UTC
From: ronjonesusa <ronjonesusa@texw.com>
Topic: 6345 Message: 6345

I have a PRO-93 I'm in the Dallas Ft Worth area and it gets everything great. My question is I had to buy the RS power supply (wall plug-in) and the adapter that suppose to fit the pro-93. If I'm listening as I do a lot at night in bed and I hear the low battery indicator when I plug in the RS P/S with the adapter plug the pro-93 crashes for a while then finally starts again. But I can't move it while I'm listening and charging because when the RS power plug rotates it makes a scratch sound in the speaker. So I know glitches must be getting on the IC's. Does anyone have a fix for this? I have a pro-95 on the way does it have it's own P/S and connector?

Thanks, Ron

I use a Belking model with my Pro-93 that attaches to the vents in the car. It works great and have one in each of my cars. The can be removed as well. I bought mine for around $10 from Office Max and Belkin has them on their site for $13.99.

http://catalog.belkin.com/IWCatProductPage.process?Merchant_Id=&Section_Id=89&pcount=&Product_Id=105446&Section.Section_Path=%2FRoot%2FWireless%2FUniversa%2E%2E%2Eessories%2Fct_Id>

If the link doesnt work try www. belkin. com (remove spaces) and it is called the Universal Wireless 3 in 1 Vent Mount. Hope it helps.

Matt

I can't comment on the 93 other than to say make sure you have the right size plug. The 95 does not come with a power supply. You have to buy it seperate. The manual incorrectly says to use an adaptiplug "C". The "B" seems to be the correct one.

6348. Durability

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-18 16:05:49 UTC
From: Chris Pohlad-Thomas
Topic: 6348 Message: 6348

I assume these radios are pretty durable? This weekend I had one sitting on a light stand plugged in and when I came back it was on the floor. Now, it is very possible that someone set it on the floor, but have people observed that these radios are pretty durable? I don't seem to notice any problems with it, but didn't know if a drop would've affected it too much.

Thanks,
Chris

My 93 passed the 3' drop test on the concrete apparatus bay floor at the fire station one night and a couple of drops to the tile floor in my kitchen---just a couple of small scratches. The display went blank and I had no sound but after turning it off and back on it worked fine.

If, you never leave your area and you do not need PL or LTR (previously noted) in your area, then the 95 is a better radio. Otherwise get either the 92 or 2067 (BIG period)... PL is a distinct advantage. LTR is rarely used in Public Safety Systems, but neat to have if needed.

The real disadvantage of the 92 is not sensitivity but that 6 batteries are required.

If you fix mount a 2067, antenna hook up seems to be critical. I have a home made antenna for tracking 800/900 range which performs well. And I'm experimenting with lengths for VHF and UHF 400.

You have to wait for E-PTRL, then press trunk to hold PTRL. If you have a few such important Talkgroups, then set them into one ID bank and lock out the other 4 banks.

From: jscheider <jscheider@yahoo.com>
Topic: 6359 Message: 6359

We just got back from Daytona where we used the PRO-95 for all the races. What a great race scanner!!!!!!! A quick program modification with last minute updates (using Don's fantastic program) and then simply cloning to two other PRO-95s. In just a few minutes we were ready to go. It sure is nice to be able to see the frequency, car number, and driver name on the screen. Plus with the modification to the earphone output, there was no problems hearing with our headsets.

Everyone sitting near us was very envious. I really felt sorry for all of the people talked in to buying the scanners sold at the track. I listened to some of the vendors try to tell how great their scanners were while trying to keep from laughing. The PRO-95 "racing scanner" is the way to go.

I've posted the file of frequencies we used in the files section. It contains frequencies for Winston Cup, Busch, Trucks, IROC, NASCAR Officals, & Radio/TV. Anyone going to other NASCAR races should be able to use these as a base to start from and with minor modifactions, be ready to enjoy!!

As Matt said, you can't go direct --- BUT you can do it like this.
When it stops, hold TRUNK and it will display "ID HOLD ON".
Then push PGM and TRUNK.
Then you can step through your programmed Talk Groups until you find
the one you want.

Dick

PSTA is the Pinellas Suncoast Transit Authority, the bus company serving Pinellas County/St Petersburg Florida. I gather that they are on the Pinellas County Motorola Type II SmartNet system. You can get data on the following sites:

http://www.photonick.net/radio/
http://www.angelfire.com/fl/pinellastrunktracker/

If you are interested in this area you should join the TampaBayTRS list at http://groups.yahoo.com/group/tampabaytrs/

You need the "B" connector. The "C" has a larger outside diameter so it spreads the contacts to far apart, so when you move the plug any it looses contact.

From: SKIPSTER23 <skipster23@yahoo.com>
Topic: 6367 Message: 6367

I am making sure I have set up my 93 correctly and making sure what I read on Don's site properly. Am I correct is saying frequencies under 460MHz need a step of 5.0KHz? Why is this? If I leave it at 25.0 KHz how bad, if any, will my recpetion be? Would I need to change my AIR search bank to the lower step for better reception or can I leave it as is (12.5KHz). I have been scanning for a while but have just recently gotten into the "techincal" side of things. Any help would be appreciated. Thanks

Matt

PSTA is the Pinellas Suncoast Transit Authority, the bus company serving Pinellas County/St Petersburg Florida. I gather that they are on the Pinellas County Motorola Type II SmartNet system. You can get data on the following sites:

http://www.photonick.net/radio/
http://www.angelfire.com/fl/pinellastrunktracker/

If you are interested in this area you should join the TampaBayTRS list at http://groups.yahoo.com/group/tampabaytrs/

6372. Priority Channel

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-20 00:24:34 UTC
From: Chris Pohlad-Thomas
Topic: 6372 Message: 6372

I have a question about the priority channel on the 95. I have it programmed for the weather channel and occasionally when i am listening to another frequency, say the tower at the local airport, what I am listening to breaks up because I can see it is trying to listen to the weather channel, although there is no weather alert active. Is this normal? It doesn't seem to do it all the time, but once before it would stop on a frequency with nothing on it.

Thanks for the help,
Chris

Seems like the difference between the 93 and the 95 is the firmware, and possibly the EEPROM. I've been wondering lately if the EEPROM is really the same, and it's just a firmware difference. I have both a 93 and a 95, but I've been too lazy to open them up and compare things.

I've been debating if I should sell the 93 and buy some other toy, but it's handy to keep one in the car and one at home... But if there was some way to "upgrade" the 93 without too much fuss... Hmm. Possibly some way to re-flash the 93 and make it into a 95? Remember the Pro-2004, 2005, 2006 series? Same scanner, just earlier models had some channels locked out?

Chris,
The reason the channel you are listening to is breaking up is because the scanner is checking the priority channel to see if anything is on it. It will check the priority channel once every two seconds or so. Hope this helps answer your question.

Richard

The upper EEPROM is for the Pro-93 and the lower is for the 95. Hmm.

IC202 12357695 IC EEPROM HN58X24256FPI MX91321

IC202 12357695 IC EEPROM HN58X24256FPI MX91321

It's very possible that Radio Shack will automaticly upgrade a Pro-93
to Pro-95 when in for service. Could be that is the only parts
available.

I sent a 93 in for repair early last week, it came back as "no parts
avaliable." They wouldn't change parts from one model to another at
the repair centers... They can not service one model with anothers
components...

Warranty and service agreement repairs pretty much mean you get
a serviceable unit back, parts available or not. Someone at RS
must be regretting that.

I bought last Pro-93 at my local Radio Shack. Paid 119.00 with 10% discount for applying it to a Radio Shack credit card. Found out it was version 1.0. Brought back to send for update but store manager Knew nothing about problem. I then contacted customer service via email and they told me my model needed update. went back to Radio Shack so they could send to service center. Got back from service center still no update. They did what is called a electrical alignment. Whatever that is. I called the manager at the service center, explained that I needed firmware update. He told me to have it sent back, so I did. I'm still waiting to use my brand new scanner. Hope others have better luck.

6390. Odd thing

They have both the 93 and the 95 for the same price in the 'back room' of the the main outlet factory outlet in Ft Worth. If you are ever near FT Worth it is definately worth the trip to the main factory outlet. (both pro 93 and 95 are $125.00 backroom but they only have a 15 day return)
Many items (almost all i have purchased) work well and are only box damaged. Mail order is not an option, heck I cant even walk in a pick up parts I have ordered even thought it would save me and them money and time.
Make sure u hit the back room as they have a regular store up front and it cost regular price.They dont always have every thing they have up front but often they do.(bring money- lots of money. I hate to go there for a $2 part as it often cost hundreds to get out :)

I dont know much about scanners I hate tring to find out how to use the trunnkingg on it as no one around here seems to know mush about trunking.
It is just like new not all scatched or any thing like that.
I have st paul PD and stuff like that in it but dont know any thhing about trunking how to set that part up.
So that is reason I will sell my PRO95 for 110.00
to first one that will send me post office money order for it.
will send it insured shipping works great with win95 programing software will throw in cable for computer as will not need that any more.

I live in the twincities in Minnesota.
has 1000 memorys

High-performance, extended coverage scanner has the ability to scan both trunked and conventional channels at the same time. It has 1000 memories-arranged in 10 banks of 100-and 1000 ID memories that can display your text entries for easier identification of frequencies. The triple conversion circuit and switchable 20dB attenuator cut image-type interference. The display provides four lines of 12 characters and has a push-button backlight with programmable on time. You can search preset non-trunked police/ fire, marine, CB, Ham and VHF-air frequencies for activity. Extended coverage includes CB (AM), 220MHz and 1260MHz Ham bands. Weather alert sounds an alarm and the display indicates level of alert. PC interface permits computer control

this is about all I can say very nice hand held scanner it sells for 249.00 at the shack here in minnesota.
I just need the money..

Power save
. Key tone on/off
. Alpha-numeric display for ID tagging allows frequencies to be easily identified by the name you assign to them
. Triple conversion Super heterodyne receiver virtually eliminates image-type interference
. Frequency Coverage: 25-54, 108-136.9875, 137-174, 216-225, 406-512, 806-960 (excluding cellular) and 1240-1300MHz
. Digital weather alert indicates watch, warning, statement or test statement along with 7 preprogrammed NOAA WX stations
. Power: Requires 4 "AA" batteries or adapter: AC #273-1767/C, DC #273-1810/C
. Jacks: Earphone, PC interface/cloning, antenna (BNC), external power
. Includes: Detachable flexible antenna, belt clip, two battery holders
. Size: (less antenna) 6-1/2×2-5/8×1-3/4"
. Includes: VHF Lo/Hi, UHF, VHF-Air, 800MHz, Dual-Trunking, Extended Coverage

little more info on scanner
thanks Dave for your intrest..

6395. Wanted: Utilities for Central Mass & surrounding areas

Date: 2003-02-22 15:10:35 UTC
From: kb1esx <kb1esx@spamcop.net>
Topic: 6395 Message: 6395

Hi All,

Does anyone have any frequencies for the utilities in the central mass area?

I'm mostly concerned with the electric utilities. Mostly if the power goes out I want to listen in on what's going on and when the lights are coming back on.

If you have them in a file for Win95, that would be great!

Thanks!

6396. New file uploaded to PRO-93_95

6398. Diamond RH77CA antenna?

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-23 23:16:26 UTC
From: labdog98f <scannerfreq@worldnet.att.net>
Topic: 6398 Message: 6398

Has anyone used the RH77CA with these scanners and if so, how does it compare to the factory one?

I am about to order the RH77CA for a VR-500 since the stock antenna on that radio is deaf, and I wondered if the RH77CA would offer any improvement for the -93/-95.

TIA for any opinions!

Scott

I have the pro 95 and depending on the rechargable batts that you
get, mie are the 23-149a , pack of 4. charge for about 10 hours and
they will last for a very long time. I leave mine on at nite with
the rechargable batts in and it last for 2 nights. roughly 16 hours.

yes you can recharge them without puting them in the scanner. goto
radio shack and tellthem you want a charger for the batteries. you
can charge 4 aa batts at a time.

6401. newbie question - what am I doing wrong?

Yahoo group: PRO-93_95 (2003)

Topic: 6401 Message: 6401

I'm new to this trunking thing. I have lot of experience with radios and scanning and monitoring from back in my electronic warfare days in the army.

i have a Pro-95. I've started putting info into win95 and I have the cable on order so by Monday or Tuesday this might not be an issue.

I've RTFMed 3 o4 times and scanned through the messages here.

I'm trying to get the local police dept Motorola 800 series trunks to work. I have the freqs programmed into channels per page 28 of the manual. and I have the talk groups stored in bank 0-0 through 0-19. I just took 20 group IDs that looked interesting for all the local agencies.

all the channels are tagged as MO.

I think that I've done everything correctly.

Now, when I scan in either closed or open mode nothing comes up. but the second that I put it into manual and just scroll up an down I'll pick up all kinds of things - on talk groups that I have programmed in - on the regular UHF channels. and I can see the talk group IDs displayed.

anyone have an idea what I'm screwing up?

thanks,

I have the RH77CA on my Pro-95 that I keep in the car. There is a significant improvement over the stock rubber duck antenna and the construction quality is really good. I prefer it to the Austin Condor that I have on three other radios. In fact, I want to pick up a few more for some other handhelds and to replace the bulky Condors. If you've shopped around and found the best price, e-mail me at radiomac@... with the details.

Scott,

I've used the 77 on a number of radios and have had good performance on all. I have a clip-on BNC mount that I hang on my car window and the 77 has survived many trips down I-95 without a problem in all kinds of weather. I also have a Pryme 19' super thin wire whip that is easier to carry but doesn't seem quite as good, but you can literally tie it in a knot to minimize the bulk.

There are 2 main types of rechargeable bats
NiMH-Nickle metal hydride, the newer ones. Less draw backs longer lasting-usually cost more
NiCd-Nickle metal cadmium the older ones. Shorter life and need more care
The important thing to remember is to get a NiMH battery charger because it will charge both, A NiCd is only designed to charge NiCd bats.
In the fine print on both types of bat there is a Volt (V) rating and next to that is an Amp (mAh) rating. The Amp rating is the important one- the bigger the number usually the longer the battery will work. A 1800mAH should last longer than a 1200mAh bat. The folks at the shack should be able to point u to the right one and the right charger.
So how long they last depend on how long u leave the radio on, what the volume is, what function the radio is doing, the TYPE of battery and the age of the battery (and that is really important with NiCd) how the battery is charged and how long the battery has been left with a low charge. So there is no easy answer.
There is a little more to this and if u ask we can explain more.
There are a lot of other places esp online where u may find these a lot cheaper

1800 NiMH Duracell batteries for $0.89 ea. 0.84 ea if you purchase
10. Duracell rapid charger for $14.95, recharges four batteries in 6
hours.

--->http://www.mcmelectronics.com/

In the Product search window (upper left corner) type 293-250 for the
charger or 58-7740 for the batteries. I ordered the charger and ten
batteries in December for $23.35 plus $8.01 shipping and handling.

Four 1600 NiMH batteries at the Shack will cost $19.96 plus tax and
you still don't have the charger.

My order took 3 days.

Suzie

The file I uploade is converted from an spg file to p95 so it has all
frequencies. You message does not refer to which radio you have.
Anyway you don't want to load all frequencies into the same bank, if
they apply to various trunking systems. This file has all banks used
for your area and loaded with talkgroups and tags.

Have a look and edit as you need.

Frank

From: rsh@idirect.com
Topic: 5023 Message: 6419

Questions:
1. Do you really mean over 100 frequencies, or do you mean over 100 talk groups?
2. What kind of trunking. If Motorola, there are only the control channel frequencies to enter in a PRO-95 and you can ignore all of the other frequencies.

If there are over 100 talk groups, you will need to enter the same control channels in two banks, then put a logical group of 100 or less talk groups in one bank and the rest in the second bank. Then CLOSE each bank's talk groups.

If there are over 100 frequencies and less than 100 talk groups, you will need to use two banks to get all of the frequencies in, and then repeat the talk groups in each of the two banks.

If there are over 100 frequencies and over 100 talk groups, you will need to use 4 banks by combining the requirements of the above two paragraphs. Somehow I doubt that this applies.

See the way I set up Toronto banks 0 and 1 for the most likely problem you have... over 100 talk groups and the same small set of control channels for a Motorola trunked system. Bank 0 is police, and bank 1 is fire, and both use the SAME 8 or 9 control channels.

6420. PRO-95 vs. PRO-89

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-26 03:34:03 UTC
From: edmondcops <kc5uno@hotmail.com>
Topic: 6420 Message: 6420

Perhaps someone can offer me some insight on a comparison
of these two scanners.

I have a friend who is buying a scanner PRIMARILY for taking to
Nascar races. He has seen the PRO 89 and all the racing
specific features it incorporates. But then he got to thinking about
all the other services he could monitor with a scanner that had
more memories, etc., like the 95.

I'm a 95 owner, and have urged him to get the 95. Though I
haven't owned an 89, I've glanced at the manual and features
and believe the 95 to be a superior scanner. For one, it has a
much faster scan rate than the 89 (60 cps to 25 cps).

His concern is how to organize his frequencies by car
number/driver, and the fact that the 95 doesn't program exactly
the same way the 89 does regarding that feature. He wonders
what kind of drawback that might be.

I'm looking to hear from Nascar fans who use the 95 to get your
opinions of how well it performs as a race scanner, and the best
way to use the alpha tags to store his Nascar information in a
logical, easy to access manner. I know there are some files in
the files section already, I just want to know if there are 95
owners who are Nascar fans who wish they had the 89 instead,
or who are glad they don't have the 89 instead, and what the
reasons are.

Thanks.
David

I have both the 95 and 89 i have used the 89 at a race
before i bouhgt the 95 and I have used the 89 for
police scaning also the 95 can be mush easer to
program if you use a computer and you can enter the
Divers name as well as number the scan rate should not
mater at the race because you usaly just want to go to
one driver the 89 is smaler and comes with a stubby
antenna for easy transport
hope this can help

That stubby antenna runs 16 bucks and can be ordered for any of the
scanners...

We had 3 Pro-95s and 2 Pro-89s at Daytona this year. We used the 95s every day, but only used the 89s as a back-up or to listen to NASCAR official as a 2nd input to our headphones. I'd list the following points as comparison:

-Pro-95 much better by enabling you to have the driver name, car # and frequency on the display.
-Pro-95 much easier to program with WIN95 software than the Radio Shack software for the 89
-Pro-95 enabled us to have ALL of the frequencies i.e. ARCA, Trucks, IROC, Busch, & Winston Cup in simultainously. This saved a lot of reprogramming each night after a race or practice sessions.
-Pro-95 able to clone others. The 89 can't do this.
-Pro-89 is a little easier to program manually when compared to input of the alpha tags manually on the Pro-95.
-It would be nice to be able to go directly to a channel/car while scanning, but it didn't seem to cause any problem. I programmed all of the cars in numerical order. If I needed to go to a specific car (like Jr. when he was having his battery problems), I could just hit manual and quickly arrow up or down to the car # I wanted.

I had both a Pro-89 and a Pro-93 last year at Daytona. I sold the Pro-89 and bought my Pro-95 when they came out. The 93 is now my back-up. I've never had a regret!!

The 95 is an excellent NASCAR scanner. When you add in the trunking capabilities for the use at home, it can't be beat.

I agree the 95 is far superior to the 89 for races (I have both). I put the primary frequencies in one bank by car number (the 8 would be b08, where b is the bank number) and the secondaries in another bank. Then I can manually enter the bank/car number to go directly to the particular driver.

The 95 allows you to reprogram the frequency without changing the text, which allows for moving freqs around at the track. (I also use and recommend the Win95 software).

I like the limit search feature of the 95 better than the 89 and the reception seemed better as well. Plus, for between races, you can put a local PDs trunking or conventional freqs in another bank. Sometime can find some interesting stuff going on with the security.

Neither has PL/CTCSS tone decode ability (I also have a Uniden SC200) but I haven't found that necessary.

I used the 95 for CART, far better than the 89, you can program the scanner with a computer and save it for race only days then reload your reg stuff after the race. You can also program local PD, fire and the rest. Stubie antenna is just a gimic, with a good short uhf antenna, it works best. in CART your not always infront of the pits or everywhere the safety crew goes, stubbies just wont work well at some places like, Watkins Glen or other road races

There is the software for the pro-89 that will allow you to upload to
the scanner. This avoids manually programming and will let you
basically clone the freqs. However the software is very crapy.

I know, but the PRO-89 has a feature that lets it be
programmed on a "over the air," that is using Radio
signals. If I remember correctly, the manual says that
track owner could use this to program your PRO-89
without plugging in a cable...

Hi Rebecca,

I couldn't find any trunked public safety system in Georgetown or Killeen so figured you must be trying to track Austin.

If so you will need the new BC250D or 785D, then you will need to scan the frequencies conventional to hear any intelligence. Austin is 9600b digital and no scanner is capable of monitoring that system yet. Radio Shack/GRE are reported to be developing a hand held due out this fall for the 9600b digital. If Austin is your scanning system, then by all means get a refund on the 95, and if you can wait until November get the GRE radio.

Frank

Topic: 6420 Message: 6434

I don't know of any track or company that supports the "over the air" programming. This was a feature that one of the track side scanner companies (Racing Radios??) used to offer in support of their Uniden scanners. I think they quit offering it though because of reception problems people had at the tracks. I don't know if anyone ever supported it for the PRO-89.

6436. 95 talk group / programming question

Yahoo group: PRO-93_95 (2003)
Date: 2003-02-28 18:36:28 UTC
From: Gregg Siegfried
Topic: 6436 Message: 6436

I recently picked up a pro95, and am new to monitoring trunked systems, although I've been using scanners for a number of years.

I am using win95 and find that a very handy tool for programming the radio. However, the scanner documentation is a bit sparse, and I could use some tips regarding "best practices" for monitoring trunked systems.

First off, I'm in East King County, Washington, in the Seattle area, where there is a fairly large motorola smartzone system. There are on the order of 730 talk groups listed in the interceptnw database. I don't plan to program text for all of them, of course, but 100-200 of them would be nice. I will be using it in "open" mode to hear the additional groups, of course.

The system is divided into a number of subsystems, and the talk groups are universal across them. (this is my understanding - anyone know differently?)

What I originally have done is to program the control channels for a "region" (my terminology - could be multiple systems) into a bank, so, for example, I have control channels for Eastside public safty (simulcast, north, and ed-hill) in one back, control channels for King County PD (simulcast, sobieski, grass, mcdonald, dodge) in another bank, and control channels for Seattle PD (columbia, metro tunnel n/s) in a third bank.

First, does this configuration make sense, or since they are basically different subzones of the same "system", should I just put them all in a single bank? The total number o control channels is much less than 100 at this point, of course.

The problem with the way I am doing it now comes when trying to put in talk group IDs - because the IDs apply to any of the above 3 banks, I would have to replicate the talk group list for each one, and this seems wrong.

Any other pointers for cleanly getting this system covered with the most efficient use of channel/TID banks are welcome.

I have not programmed voice frequencies into my banks, as I understand that the 95 does not need them. This may become an issue if KC flips the control channel among the various frequencies, but with the software, and resources like trunkedradio.net, it would be a minor inconvenience to move the control channel.

Tips welcome. While I have been impressed with my reception, as I'm fairly far out in the rural end of things, it is conceivable that I may want to get a slightly better antenna. Are there good candidates for

that?

Thank you,
Gregg Siegfried

From: Steven <GemmaKnight2003@webtv.net>
Topic: 6438 Message: 6438

Greetings all. I recently/finally got a Pro-95 and I absolutly love it, but I got a question though. It's listed on the RS website that the pro-95 has a power save function but so far I haven't noticed it being featured on the pro-95 nor is it listed in the manual. Am I missing something here or does the pro-95 not have that feature?? Thanx!! {:o)

First off, Hello way out there, I have a daughter living in Issaquah and one living in Fall City.

I looks like 8 banks would be the best setup using control freqs for each site in a bank. But you have a problem with all those talk groups, I tend to agree with Karl in the previous post, surely someone out there has the system set for best use. Try to find a local scanning group.

Good luck in your efforts and wave to my girls. I'm in Virginia.

Frank

6440. Need "Stealthy" antenna for scanner...

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-01 01:40:36 UTC
From: Mark Butler
Topic: 6440 Message: 6440

Hello,

I am looking for a "Stealthy" base antenna to mount inconspicuously on my roof. Ideally it would be a single vertical element only. My primary interest is aviation 118-136MHz, but most of my monitoring is in the 150MHz and 420MHz ranges.

Any suggestions and/or links would be greatly appreciated!

Thanks Again,
Mark

These are the lengths of antennas for the following wavelength of selected frequencies.

5/8 wave 1/2 wave 1/4 wave

420.000 16.7 in 13.37 in 6.7 in
150.000 46.8 in 37.44 in 18.7 in
127.000 55.28 in 44.22 in 22.11 in

Stainless steel is likely the best material, feed with a good 50-ohm cable and you will probably need a balun at the connection point of the antenna to balance two wires connecting to one.

Correct me if I am wrong... but aren't aviation antennas horizonally polarized? Should be real easy to lie a piece of wire/metal cut to 127mhz on the peak of your roof and no one will ever see it. It may make your other bands too weak though, so you would just have to try it and see, and decide how much you like air band over the others.

THe contrast can be adjusted and +1 or +2 are better than the default. Do not use +3 as it results in big black blocks where you cannot really read the results.

Yes the shack in Lincoln IL has pro 95s for $249 got my 93 there in Jan for $129.
"ronjonesusa <ronjonesusa@...>" <ronjonesusa@...> wrote:I am the happy owner of a pro-93
and would love to have a pro-95. I
live in an area that has lots of trunking activity.

Does anyone know of a ROM ver issue with the pro-95 like there was
with the pro-93.

Would any new pro-95 have as good a chance of working as another?

The pro-93 had some kind of addressing problem on certain memory
addresses with ROM ver 1.0 and I had to go back an get ver 1.02 I
think.
Anybody heard of a problem like that on the pro-95.

Also does anyone know of any RShacks still having the pro-95 on sale?

Many Thanks, Ron Jones

Rebecca,

In my opinion, you have the best scanner in it's price range. The closest you can get to it's competition is the new Uniden 250D (or 785D base model). You will pay about double the price ($369). They have the advantage of receiving digital (if in your area) and that will cost an additional $300.

Recommend trying the Win95 software before you return it, the software is free.

Kevin

You can go to www.pro95.com and purchase the cable for around $21.00
shipping included.

It's probably the same as the one on the PRO-93; after a short period of no signal, it shuts off the receiver turns it on briefly every half second or so to check for a signal.

You can see this in effect by going to a conventional channel with the squelch closed. Wait a few seconds, then turn the squelch right down, it will take half a second for you to hear audio (depends whether you turn it down just at the moment it checks it though!) If you close the squelch and re-open it you will hear the white noise immediately. After a few seconds you're back in power save.

I'd love to disable this, or adjust the timings, since when monitoring conventional channels on the PRO-93 you can miss the start of a conversation.

My Yaesu VX-5R transciever has the same but you can either turn it off or adjust the timings to check the channel every 200ms up to 2 seconds.

Cheers,
Dave

I doubt it. They can't even get their in-car computer system to work
properly. I don't see anything happening in the near or intermediate
future. Columbus has a bit of a budget problem, and changing their
communications system probably isn't a priority. With the upcoming
digital scanners, I figure this would thwart anyone suggesting
digital for "security reasons"

Columbus has a superb system. They have talkgroups upon talkgroups.
Very well laid out.

6478. PRO 93 versus PRO 95

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-04 04:26:51 UTC
From: demino3 <demino3@attbi.com>
Topic: 6478 Message: 6478

I am sure this question has been asked a hundred times...I bought the Pro 93 a couple of weeks ago for $119 less 10% for opening up a credit card. Now the Pro 95 is on sale for $199. I am trying to justify the difference as I think 500 more channels would be cool. I also just got the 93 back from RS and they upgraded it to V1.03...for no charge. The service invoice calls out Part number xx91765, part, pcb assy logic. I definitely checked it out to see if they might have upgraded it to 1000 channels (Pro 95) but to no avail. I was wondering if V 1.0 is the latest version of the 95 firmware? What about some opinions on the 93 versus Pro 95!!
TIA, Dennis

The 95 has 700 more channels (1000 compared to the 93's 300).

>I was wondering if V 1.0 is the latest version of the 95
>firmware?

The 95's only firmware is 1.0.

>What about some opinions on the 93 versus Pro 95!!

Same RF and features. The only difference is the number of
channels (and, of course, the time required to scan through
all those channels).

Don, I figured with your software and a couple of guys in the DFW area that already have been thru the process of entering the data and all I would have to do is some tweaking then download, no problem.

I read where some guys on the list have the 95 and 93...that's interesting! You mention the time to scan thru all those channels..Do you prefer the 93 with less channels in each bank??

Generally, it's software that's programmed into some sort of read-only memory (ROM, PROM, EPROM, EEPROM, etc.). It's called "firmware" because it's not as "soft" (i.e. changeable) as the "software" on a disk or in RAM.

>you prefer the 93 with less channels in each bank??

I don't fully utilize either of them. I only have a couple of trunked systems as well as a few (less than 10) conventional frequencies programmed. I only bought the 95 so that I could write Win95.

For me, the 93 and 95 perform identically, since they both only have about 20 frequencies programmed in 2 banks.

With your software I could easily upload/download different
scenarios..But would like to buy one scanner and do it right the
first time. The money difference is not the factor.
Now I hear where digital scanners may come in the future. But what
are the chances of my local suburbs upgrading to digital anytime
soon. I'll probably bite the bullet tomorrow and trade up to the 95.
Thanx, dennis

I hadn't posted this before, because I didn't know if it was
acceptable, but since you ask, I found 4 cases at radio shack the
other day and bought them all. 1 for me and 3 to sell. I've got the
first one on ebay at
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3010715412&rd=1

the case is black so it's hard to get a good photo of it. If anyone
wants me to try to send a better, bigger photo I can.

Let me see if I understand this, the fellow who wrote one of the best pieces of software ever for programming scanners has only 40 freq's programmed into his scanner? So, Don, either you're really RS scanner keypad-phobic or you just love to write software?

No ill intended, just seems a little ironic to me. You write great stuff and are a super help to all here, but really, just 40?

Thanks for being such a boon to all of us who live places with 100's of freq's to monitor, we appreciate it.

Really, just 40?

AJ, KB3IMK

No, just 20. Not 20 in each of 2 banks, but 20 total.

(And the two scanners have the same data in them).

>> Since we're on a roll.. I live in the DFW area and would like to scan the local Plano and surrounding area police and also the airports. I live in the landing path of DFW airport. Also, attend the Busch race at Texas Motor speedway every year.
With your software I could easily upload/download different scenarios..But would like to buy one scanner and do it right the first time. The money difference is not the factor.
Now I hear where digital scanners may come in the future. But what are the chances of my local suburbs upgrading to digital anytime soon. I'll probably bite the bullet tomorrow and trade up to the 95.
Thanx, dennis

When I bought my PRO 95 they cloned it for me at the store so I've not had to program any trunk freqs, only added some conventional stuff.When you program in the EDACS systems,do you have to put in the text and talk group ids or is this sent out by the system automatically?The screen shows dispatch,fireground,etc.Just curious if someone had to type it in or is it automatic?

Thanks
Norm C

Yes you have to enter and "Text tag" the trunked systems Id's. www.starrsoft.com has A great program for the Pro95. Then you will need to order a cable, there are links for the cable. When you enter an EDACS system they have to be in "LCN" you will notice that they start on 01 in the bank. and not on 00. Very important. Also Once you have "Win95" look in the Files to see if anything is there for your area.

Greetings all. I currently have a NEW IN BOX Pro-95 for sale. I bought it last week and ended up not liking it. Only used it twice!! It comes with everything that came with it when I bought it from my local RS. I'm only asking $150.00 plus S/H for it. The buyer can choose what method of shipping they would like it to go by. I can only accept Paypal for this item. If interested, please contact me before sending any payment so I can notify you if it's going to be yours or if it's been sold. Thanx!! {:o)

Topic: 6509 Message: 6509

Hi, I just got my Pro-95 yesterday and noticed something. When I use the CB search bank with the squelch all the way down, sometimes the audio will blank, as if the squelch is turned up. Sometimes it will flicker between nothing and static. If I enter the frequency into "Tune," I can receive it fine with all the static. This doesn't happen when the antenna is off, but I've had this problem with several antennas.

TIA,

Dan

The led's are easy to install.....you have to be good with a soldering iron and have a fine tip.....the leds are 0603....blue is ok but not great....after evaluation the blue is to deep and makes reading the display hard....i am going to buy the white and try them....I will post pictures when i put the white leds in while the scanner is apart.

if you're close to the store location you bought the
radio from, not having a receipt will not be a
problem, as the sale info will be stored in the in
house computer, or if you paid with your RS card, it
is also available to them there, the only hook being
the radio would have to be returned in salable
contidion with the box manual and accessories....

go get your money....

Does anyone have info regarding the Super 800 antenna. It's the one with the groung plane.Here's the web site:http://www.scannerantennaspecialist1.com/. Is this just a gimmick? What would be a good replacement for the stock RS antenna?I listen to the trunking freqencies but not exclusively.Heck I'll start at the bottom and work my up to see what I might catch.Would more than one antenna be more benificial? Lastly, will a rooftop antenna like a discone overload the 95? Thanks for the help...Sid

This doesn't seem to happen with the supplied antenna. This happens with my other antennas: RadioShack's telescoping antenna which I have as well as my 2-meter ground plane and HF dipole outside. Moving the coax around a bit will solve the problem. Why does this happen only on the preset CB search bank and not in Tune mode or anywhere else?

6520. locking out EDACS talkgroups

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-07 15:01:47 UTC
From: btrotta
Topic: 6520 Message: 6520

I have been trying to lock out certain talkgroups while monitoring an EDACS system.
But when I follow the instructions in the manual I continue to hear the talkgroups that I do not want to hear.
Does anybody have any advice? Is there something missing from the manual that I need to know?

Thanks for any help you can offer.

Brian

If that's what I have to do, I will. But I'd rather not.

I know I haven't captured all of the talkgroups yet ... and haven't found a complete list posted anywhere so I'd like to stay in open to pick up undiscovered groups.

Reading the manual it =seems= like it's possible to lock out groups without going into closed mode.

Thanks.

I looked up "Locking Out Talk Group IDs" in my PRO-95 manual -
the table of contents says it's on page 65. On that page, in
the right-hand margin, there's a note that says:

You can only lock out talk group IDs when the scanner is
in the closed mode

try programming the freqs in a second bank and using one bank to see what is happening and the second to explore for more talkgroups...of course, lock out the talkgroups you don't want to hear in the first bank.
you can go to http://www.trunkedradio.net and usually find a pretty comprehensive list of freqs and talkgroups....

Those look like Motorola Type-II talk group IDs. You'll also need the system's control frequencies.

Try www.trunkedradio.net - the database there should list the control frequencies and most (if not all) talk groups.

>
As Don said, they are Mot. Type II talk groups.
2576 = DISPATCH-1
2608 = DISPATCH-2
2704 = CAR TO CAR
2800 = NARCOTICS
2896 = LSP-1
2928 = LSP-2
2960 = COORDINATE CALL

These numbers (0b90) are the Hex equivalents. Ignore them.

You are looking at the State of Louisiana system. Trunkedradio.net has this system and it seems to be pretty complete. I listen to troops A,B,C often. The system is a Smartzone system. You only need to enter the control frequencies for the towers closest to the area where you will be listening to them. I think there is a total of 46 sites. I entered them all into my p95, so that when I travel it switches to the next control channel automatically.
Each troop in Louisiana has about 15 talkgroups I believe. I ended up using a bank of 100 talkgroups just for state police and another bank for wildlife & fisheries and other state agencies. The majority of the traffic in my area is only on the primary dispatch talkgroup for the troops, so you may decide not to put in every talkgroup. Go to this site for maps of different troop areas and other useful info:
http://bellsouthpwp.net/k/d/kd5eis/

To: PRO-93_95@yahoogroups.com
Subject: [PRO-93_95] plug

I went to my RS to get a car power adapter I brought
in my scanner and they got me the 9v dc cord and fit a
"c" plug in after using it I found out that the plug
was loose and made the power be cut off to my pro 93 I
went back and they tried to find a better fit but they
said that was the best fit anyone know of a beter
one?

thanks

The "C" is actually to big it spreads the contact too far apart. So when you move anything around it looses contact. The "B" is the right size.

I would say try this from Ham Radio Outlet: www.hamradio.com

14) Manufacturer: POUCH
Item : GENERIC
Description : POUCH-FITS MOST HANDHELDS
Price : $17.95
Stock status: In Stock*

There is not a photo but since a have a few I can tell you about the
"Pouch".
They are black neoprene (?) case /w velcro strap to hold the unit in.
There
is no opening or clear plastic in the front; you'd have to pull the
unit out
to use the keys. The material does not impede the audio. Every pouch
has a
belt loop. Most pouches have foam inserted in the bottom to help
protect the
unit from drops.

I currently use a pouch that was made for a Yaesu FT109RH 220MHz HT
that I
used to have for my pro-95; it fits nicely.

Also should be available from Amateur Electronic Supply www.aes.com

Hope this helps; 73

I put white led's in and 200% better than the blue. Much brighter and greater contrast. I put a pic of it in the pictures section. The picture makes it look like blue but it is not those are white led's with a blue tint.

6545. New to group with a Pro 93

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-11 02:38:17 UTC
From: Chris
Topic: 6545 Message: 6545

Hey Everyone,
I'm new to this group and also to scanning. I just purchased my first scanner. It is a pro-93. I am having some trouble programming the thing. I am in an area that is trunk tracked. A few of the frequencies have a hyphen in them (ie 400-0, 300-5, etc). How do you program them into the trunk system.

Also if there is anyone in the North Dallas area that would be willing to meet and help me understand all of the functions of the scanner, I would greatly appreciate the help.

Chris

Chris,
First off when u see a hyphen between a freequency it's just telling you that you have that frequency between the other frequency (i.e. 154.000-156.000). I don't want to put alot of text on here to bore everyone, but I will give you my AIM s/n that you can talk to me direct about all your questions. It's LFFD926FF and if you don't have AIM here's my email Miked_03@ yahoo.com. Notice I put a space in there so spam bots will not track it. Oh well that's all I gotta say. Drop me a line either way and i'll get u set up.

Chris,

I believe the 400-0, 300-5, etc. you are referring to are actually talk-groups and not frequencies. If you're not fimiliar with trunking, talk-groups are what you actually follow. The differant agencies, departments, etc. are assigned specific talk-groups vs. frequencies. If you try to follow the conversation by scanning frequencies, it will be hard to determine who's who, because they jump to any frequency that is available. Basically you will need both the frequency information for the system you want to monitor and the talkgroups you wish to listen to, as well. You can find an abundant of information on www.trunkedradio.net. I still have a lot to learn, but these groups and trunkedradio.net have taught me very much.

I have a Pro-95 and not a 93. I believe they are basically the same, w/ the exception of channels- but I am not sure. The simplest way to program the scanner to track trunked radio systems is to use Don Starr's program called Win93 (win95 for Pro95). It is a free program, and it actually works very well. You'll have to purchase a cable- hopefully someone here can tell you what cable a 93 will take. I hope this helps.

Todd

The last link would not work due to word wrap, so to get to it click
on files at the left, then Pro-93 folder, then Pro-93 frequency files,
then Pro-93 Files Central and finally DFW for Pro-93 zip.

6551. New Orleans data file

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-11 16:02:47 UTC
From: adoniscat
Topic: 6551 Message: 6551

Hi folks,

Does anyone have a pro95 or 93 file for New Orleans? I searched the archives here and on the 95 group, and didn't see one.

I'm going tomorrow (for the SEC tournament), so time is of the essence (nothing like procrastinating, eh?). Feel free to email me directly.

Thanks!

-sam

Well, it should work, as long as you have the correct DIN-8 to DB-9
adaptor cable... Or if your machine has USB, then upgrade your VPC OS
to Win98 and get a Belkin USB adaptor with a DB-9 connector and use
that.

I've managed to get most anything working with VPC on several different Macs.

6555. In-Attic Antenna for PRO-95/2053

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-12 13:23:43 UTC
From: p3epilog
Topic: 6555 Message: 6555

I'm interested in mounting an antenna for my PRO-2053 in my attic. Our neighborhood doesn't allow outside antennae, so I figure that the next best thing would be to get one up as high as I can inside. That said, I don't know what to look at as far as selecting an antenna, nor do I know what would be involved in setting it up. My wife would not be wild about having a plain coax cable poking out of the wall or ceiling, so I will have to put in a "good-looking" connection of some sort (perhaps like a cable outlet?). Does anyone out there have any advice or expertise that they'd be willing to share? Places to look for an antenna, features to look for, what to avoid, installation, etc. are the kinds of info I'm after. Right now, I'm just using the stock antenna that came with the 2053.

Thanks,
Andy Entrekin
Bedford TX

Anyone have any good frequencies for the upcoming Oshcosh Wisconsin airshow??? I realize this takes place during July, but I tend to make early plans... And one big plan is to take the 95 and/or 93 along as well... We may do this venture via flying in and should make a very nice trip to hear whats going on as well as seeing it... I went to school at Fox Valley Tech but never drove the 30 minutes to see the show... Always thought women and alcohol was better at age 20... ...was I ever, well, not in the right frame of mind...

This is pretty much waaaaay off topic for this group, but.......

You can find a PDF with what you're looking for here:

http://www.carmachicago.com/air.htm

You might also consider joining Yahoo groups CARMA and SCAN-WIS for
further info. Between the below zero temps of late and the snow,
there's not yet been any talk about air shows this year
(unfortunately).

Dave,

You DEFINITELY want to bring along a scanner! I haven't been back to Oshkosh since 95, but it was a real hoot listening to the controllers direct the aircraft. Because of the large number of aircraft arriving, the controllers tend to have little patience with "knucklehead" pilots who have difficulty following instructions, and they tend to express their displeasure in a rather direct manner. :-)

The controllers who work the show are the "best of the best", and it's a pleasure listening to them work the aircraft.

Mark

6568. uploads and download troubles

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-14 00:02:12 UTC
From: Karl Dahlquist
Topic: 6568 Message: 6568

I am having quirky results with the win93 software from starrsoft. I bought a cable from blackbagsoftware, and am running it with an USB connector.

I can enter frequencies into the program and download them to a blank scanner. I can upload frequencies and alpha tags from my scanner to the software, and then in turn download them into a blank scanner. However, when I manually enter frequencies and alpha tags into the software, and download into my scanner, the frequencies appear, but not the alpha tags (or talk groups)

I am perplexed as to what I am doing wrong.

6569. Pro95 + VR-500 cable + Keyspan USA-19Qi = Win95 Works

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-14 00:17:20 UTC
From: Michael Madden
Topic: 6569 Message: 6569

Hi,

Would like to thank Don Starr for such a well-designed and easy-to-use software package for the Pro95. Very professional, easy to manage, and not buggy. Don's website www.starrsoft.com also contains very valuable information about USB/serial converters, cloning cables, adapters, etc.

My experience:

I used the Keyspan USA-19Qi (from Fry's for $39) as my USB-serial converter. I'm using Windows XP, so I had to download the latest Windows driver from www.keyspan.com to get the converter to even be recognized by my computer. I set it to COM2.

I used the cloning cable that came with the Yaesu VR-500 ADMS-3 package. I needed to add a stereo-to-mono plug at the end of the cable for it to work.

More specifics:

1) Version: 0.13.
2) DLL: No, I didn't have to add them to my directory.
3) Windows Version: XP Home
4) Cable: Yaesu VR-500 (ADMS-3 kit) with stereo-to-mono plug.
5) CPU: AMD Athalon 1 GHz
6) RAM: 256 GB
7) COM Port: USB to COM2
8) Problems: None

Thanks also to group member 'hipops' for supplying the frequency file 'SFbayarea.p93' on the Pro-93_95 groups file folder.

Anyone else have a recent bay area frequency file to share?

I'm putting together my own, and I'll add it to the groups' folders when it's finished.

Thanks again to Don Starr for the fantastic software.

Mike

For your alpha tags, are you deleting the entire alpha tag field in Win93 before entering a new value? An alpha tag is never "blank" --- it always contains exactly 12 characters, even if those 12 characters are "spaces".

You say "(or talk groups)".... do you mean the alpha tags for the talk groups or the Talk Group IDs? If alpha tags, see above.

From: mike brown
Topic: 6575 Message: 6575

Hello,

I recently reprogramed my pro 93 and upon turning it off then back on it lost my bank text ID. When i tryed to reprogram it using 'manual, select channel, manual, PRG, FUC then 7' it would type it and store it. But when it would stop on a transmisson it would only show the bank number and channel number. Did i do something wrong or is this the dreaded 'alpha bug' i've heard other people talking about? And what exactly is the alpha bug and why does it infect after a certian amount of time? Because I used to have the bank programed. Also I am trying to put it into an EDACS mode bank. I can put a text ID into any other bank though is what is really ticking me off! Any help would be appricated very much. Thanking you in advance Mike Brown 926 Ludlow Falls FD

When the radio stops on a trunked transmission in a trunked bank, the bank's alpha tag is not displayed. Instead, the 4th line displays the Talk Group ID's alpha tag. If there's no alpha tag programmed for the Talk Group, then something of the form "ID #1234" is displayed.

The bank alpha tag is displayed when the radio stops on a non-trunked frequency.

From: Don Starr
Topic: 6577 Message: 6578

It's unlikely that you actually saw the bank's alpha tag while
receiving a trunked transmission. I'd guess that the scanner
was really receiving the transmissions "conventionally".

Before it "stopped working", had you made any programming changes?
Added / deleted frequencies? Changed Rx Mode on any channels (i.e.
FM to EDACS) ? Changed the bank's trunking mode?

No, this behavior cannot be attributed to the PRO-93 v1.00 "alpha
tag bug". That bug would cause an apparent overlap between some of
the *channel* alpha tags in banks 0, 8, and 9.

A suggestion for identifying the trunking system, without relying
on the bank's alpha tag (since you can't use it): give each of the
system's frequencies the same or similar alpha tags. For example,
my local MOT-II system has three control channels. In the same bank,
I have a couple of conventional frequencies. The bank is tagged with
"Santa Clara". The trunking control channels are tagged with
"SantaClaraC1" through "SantaClaraC3". My conventional frequencies
are tagged with "CHP Cars" and "CHP Base". I also have alpha tags
for each of the Talk Groups that I have programmed. When I receive
a transmission on the trunked system, the display looks like:
S002/...^-MO <- 002 indicates control channel "slot"
VC 867.33750 <- voice frequency for this transmission (not CC)
SantaClaraC3 <- control channel's alpha tag (in Ch 002)
Police Disp <- talk group alpha tag

When I receive a conventional transmission in this bank, I get:
S003/..D^-FM <- channel 003 is "CHP Cars"
42.28000 <- channel 003's conventional frequency
CHP Cars <- channel 003's alpha tag
Santa Clara <- Bank 0's alpha tag

-Don

I saw on another list (pro-alphanumerics) that you mentioned a
display of "T IDbk 01234". That's the "ID Sub-bank On/Off Mode"
in Win93. When this mode is selected, you get the display you
describe. When this mode is not selected, you get an alpha tag
or talk group ID (see below). I don't know how to turn this on
or off via the scanner's keypad.

That said.... it is not possible for the PRO-93 to display the
bank's alpha tag on the fourth line when you are receiving a
trunked transmission. As I said in my previous email, the 4th line
displays one of two alpha tags:
1) the bank tag when receiving a conventional transmission
2) a talk group ID (alpha tag or number) when receiving a trunked
transmission.

I think the problem you are referring to happened to me. It sounds like the same thing anyway. All I did was hit the text button without pressing the program button. The same thing happened to me on a trunked system and all of the alpha tags that I entered reverted to the numeric talk group ID's. Hope this helps.
Tony

Don,
Thanks for the information on the sub banks. NOW WITH THAT SAID...It wouldn't display the bank text ID on the 4th line you're right. However I never said it did display it on the 4th line. Mine when it did display(and it did I'm not trying to B.S. you in any way) the bank texted ID was on the 3RD line not the 4TH. But now my sub bank info is on that line. So in conclusion I had a text bank ID(on the 3rd line) ALONG WITH the talk group ID (on the 4th line). I don't know if this a one of a kind scanner or what, but I tell no lies about it.
Sincerley,
Mike Brown LFFD926

Here's the thing though I used to have it doing a bank ID for a trunked system before. Just as of the night before last it stopped working on me. Would that be the 'alpha bug' thing? I dunno why else it would do that. But thanks again for taking the time to read and reply to me.

Tony,
Thanks for your input Tony...but that's not the question I asked. (I know it's always hard to find out what a person it really asking on a computer) I am already aware of that TEXT key function. Thank you for you time to respond back to me though. I do appricate it.
-Mike Brown Ludlow Falls FD 926-

jas8650@... wrote:I think the problem you are referring to happened to me. It sounds like the
same thing anyway. All I did was hit the text button without pressing the
program button. The same thing happened to me on a trunked system and all of
the alpha tags that I entered reverted to the numeric talk group ID's. Hope
this helps.
Tony

The quick answer is yes, but it may be better to buy a ready made one. The designs are available on the net. Not all RS stores will have the parts you need but there are web sites where you can order them too.

So what would be the charge time on 4 - 1800 NiMH on a 600ma A/C adapter charger? I can also use this same 600ma adapter on my scanner by either powering it or charging batteries through it, correct? I mean it's only going to draw the requisite 300ma, right?

1800 NiMH Duracell batteries for $0.89 ea. 0.84 ea if you purchase
10. Duracell rapid charger for $14.95, recharges four batteries in 6
hours.

--->http://www.mcmelectronics.com/

In the Product search window (upper left corner) type 293-250 for the
charger or 58-7740 for the batteries. I ordered the charger and ten
batteries in December for $23.35 plus $8.01 shipping and handling.

Four 1600 NiMH batteries at the Shack will cost $19.96 plus tax and
you still don't have the charger.

My order took 3 days.

The book states 16 hours for 1600mAh NiMH batts, with the scanner turned off using 300 mA adapter. I think the 600 mA adapter will take the same amount of time. It will probably take 18 hours. Best to get a 4 slot quick charger, mine takes 6 hours for 1800's.

In order to do that you must store the ID's you want to listen to and then close the bank(in the manual). In order to hold on one group that group must become active and while it is hold down the trunk button for two seconds and it will say ID hold.

To listen to one talk groupe only you hold the Trunk Key down untill ID Hold is displayed. To save a talk group ID do a short press on the trunk key. To listen to only certain groups I use the Lockout key for groups I'm not interested in. For more info. you can find the PRO-95 manual online at http://support.radioshack.com/support_electronics/doc69/69487.pdf and do a search for talk groups.

6596. BNC connector

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-18 03:12:52 UTC
From: ScanDekalb
Topic: 6596 Message: 6596

Hello all,

I recently bought an 800 MHZ, stubby antenna from Scanner Antenna Specialist's and it won't connect to my BC235XLT. There is a different type of BNC connector on the antenna (which fits the Pro-93 fine) then on the Uniden BC235XLT.

Does anyone know of an adapter that will make this antenna work on the Uniden?

http://www.scannerantennaspecialist1.com/antennaspecialist/id33.html

It looks like it needs a female to female connector?

Thanks,
Jed

6601. blank display problem fixed but.....

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-18 17:27:41 UTC
From: jan_dale20022
Topic: 6601 Message: 6601

When I powered up my radio this morning I finally got the blank display problem I have read so much about here. After the initial shock I remembered that the solution was here so I searched the archives and fixed that problem. Back to normal...well, sort of. The problem is now none of my alpha tags show up in any of the trunking banks, conventional are fine, just the trunking. And the display appears as:

S902.....D!-MO
VC 857.76250
T IDbk 01234
MOT: 00112

The 3rd line mainly the difference I have and of course the 4th for not showing the text tag. I know from before that there is someway to fix this(I think anyways). Can anyone please help me?

Thanks
Dale

From: fmon1
Topic: 6601 Message: 6602

The third line is the bank Tag, navigate to 900 and press PGM then TEXT. Text in the System or Service, however you want it to read, up to 12 characters. Press ENTER.

Fourth line is the ID Tag, if in the 900 bank, Press PGM then TRUNK, navigate to Bank 0-0, ID NO. 00. Press TEXT, text in the Tag. Again, limit to 12 characters. Press ENTER, then the up button for the next tag, repeat the above for each.

This would be much easier using Win93 or 95 for whichever radio you have.

Dale,
In order to fix your Group ID just hit the TEXT key when you get a transmission that is active. In order to fix your bank ID...I've been told by Don Starr that you can't fix it because it is "IMPOSSIBLE" that there was even text in the first place.(even though he's wrong about that!!) But I guess we both can tell him that it isn't Impossible. lol. Well hey I hope this helped you out. Keep on scanning.

Press MANUAL, Press FUNC 5, Press SCAN. A minus sign should be
indicated below the bank number as well as in front of the the system
type upper right. If they are +, then you were already in closed.

Press MANUAL, Press FUNC 5, watch change on 4th line of display bank closed, Press SCAN. A minus sign should be indicated below the bank number as well as in front of the the system type upper right. If they are +, then you were already in closed.

Thank you very much Michael. That fixed the text problem. But I still have the:

T IDbk 01234

Still there on the 3rd line. Maybe this was supposed to be there all along I do not know. But I am not used to seeing that there.

Thanks
Dale

Dale,
In order to fix your Group ID just hit the TEXT key when you get a transmission that is active. In order to fix your bank ID...I've been told by Don Starr that you can't fix it because it is "IMPOSSIBLE" that there was even text in the first place.(even though he's wrong about that!!) But I guess we both can tell him that it isn't Impossible. lol. Well hey I hope this helped you out. Keep on scanning.

display problem I have read so much about here. After the initial
shock I remembered that the solution was here so I searched the
archives and fixed that problem. Back to normal...well, sort of. The
problem is now none of my alpha tags show up in any of the trunking
banks, conventional are fine, just the trunking. And the display
appears as:

S902.....D!-MO
VC 857.76250
T IDbk 01234
MOT: 00112

The 3rd line mainly the difference I have and of course the 4th for
not showing the text tag. I know from before that there is someway to
fix this(I think anyways). Can anyone please help me?

Thanks
Dale

From: stevereitter
Topic: 6597 Message: 6613

Thank you both for your reply. You indirectly helped me resolve the problem. For future reference, your frequencies must be set to four decimal places. 39.38 will not work, 39.3800 will (apparently). I made that change and Poof, it worked!

6614. MOT vs FM?

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-19 00:38:38 UTC
From: stevereitter
Topic: 6614 Message: 6614

When entering data into Win95 and the Pro 95, if I am unsure about whether the specific freq is part of the trunk channels or a standalone channel, can I list is a MOT? If it is not a trunked channel, will is still work for FM? or if MOT is selected will it not receive non-trunked transmissions?

And....if MOT will work either way, is it better use MOT as a default instead of FM?

Thanks for your help

6615. RE: [PRO-93_95] blank display problem fixed but.....

Date: 2003-03-19 03:08:02 UTC
From: Russell Adams
Topic: 6601 Message: 6615

The third line is the frequency tag. In trunked mode I put a text tag on every frequency in the system. This way I know which system is being monitored. That leaves me more room for clearer trunk group tags on the fourth line.

If you are going to use a quick charger, pay the extra money for a good one.

Many rechargable batteries are ruined by quick charging. If you batteries are hot after a quick charge, you most likely have caused some type of damage and/or shorten the life of the batteries.

I have two; one for my RC airplanes and one for my Ham radio HT. They both will charge 1800Mah's in one hour with no noticable increase in temperature. The one for RC has the ability to sense the peak charging and will switch to trickle charging. The one for my HT has both peak detection and a thermo sensor and will also switch to trickle charging.

MPT1327 is a European trunking format. See this link
for some info
http://www.prosec.com.pg/pacom/products/2wayradio/Tait/mpt1327.htm

The pro-93 will not track it. Not many systems are in
the US yet because it appears that motorola is doing
everything in its power to stop it from being
implemented

Dale,
You're welcome. I still have the T IDbk 01234. But I guess that's just one thing I'll have to live with. Even though I liked it alot more with the bank ID on also. Say, I haven't heard from 'ol Don Starr about this 'problem' lol 'Cause you know he said it was IMPOSSIBLE that there was a bank ID in the first place. Well I'll talk to you later.
-Michael Brown LFFD 926-
p.s. What happened to you Don??????? haha
Dale <dalem@...> wrote:Thank you very much Michael. That fixed the text problem. But I still have the:

T IDbk 01234

Still there on the 3rd line. Maybe this was supposed to be there all along I do not know. But I am not used to seeing that there.

Thanks
Dale

Dale,
In order to fix your Group ID just hit the TEXT key when you get a transmission that is active. In order to fix your bank ID...I've been told by Don Starr that you can't fix it because it is "IMPOSSIBLE" that there was even text in the first place.(even though he's wrong about that!!) But I guess we both can tell him that it isn't Impossible. lol. Well hey I hope this helped you out. Keep on scanning.
-Michael Brown Ludlow Falls FD 926-

jan_dale20022 <dalem@...> wrote:When I powered up my radio this morning I finally got the blank
display problem I have read so much about here. After the initial
shock I remembered that the solution was here so I searched the
archives and fixed that problem. Back to normal...well, sort of. The
problem is now none of my alpha tags show up in any of the trunking
banks, conventional are fine, just the trunking. And the display
appears as:

S902.....D!-MO
VC 857.76250
T IDbk 01234
MOT: 00112

The 3rd line mainly the difference I have and of course the 4th for
not showing the text tag. I know from before that there is someway to

fix this(I think anyways). Can anyone please help me?

Thanks
Dale

I think I typo'ed on my original post. The subject line should have read "What is an MPT 1327 system"? Sorry about the confusion. My thanks to those of you who responded. The link you gave to me Greg was helpful. I guess I'll just have to keep listening to what conventional freq's that Decatur is still using.

"I still have the T IDbk 01234." This is a feature!!!! See Pro93
documentation page 61!!

From a note posted on 2/1/2002

There is another feature described in the Pro93 documentation on page
61 at the top half. It deals with turning on and off sub-banks. During
scanning,
you can to turn off or on one or more of the sub-banks for that bank,
you press FUNC and then TRUNK. (Important: you have to do this when someone
>> is transmitting or it doesn't switch). This will then change line 3 to
look like

T IDbk 01234

>> This means Trunk ID sub-bank programming/lockout mode. This text
replaces the Banks Text tag on line
>> 3 when scanning. If one or more of the sub-banks are turned off, the
numbers in the text are replaced with
>> a dot i.e. 'T IDbk 0.2.4' In this mode, you can then lockout or turn
on a specific sub-bank
>> by pressing FUNC and then a number between 0 and 4.

>> You are likely in this sub-bank programming mode. It affects all
trunked banks when scanning in this mode.

>> To switch out of this mode and back to the Bank Text tags, just press
FUNC and then TRUNK .
>> Important: You have to do this when some one is transmitting otherwise
it doesn't switch.

6628. RE: [PRO-93_95] blank display problem fixed but.....

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-21 02:09:44 UTC
From: Don Starr
Topic: 6601 Message: 6628

The "T IDbk 01234" display on line 3 is "ID sub bank mode".

In order to toggle the "ID sub bank mode" display on or off,
press FUNC TRUNK while receiving a trunked transmission. The
third line of the display will revert from "T IDbk 01234" to
the text tag of the control channel.

>From the PRO-93 manual, bottom of page 50:

When the scanner decodes the Motorola control channel
and finds the voice channel, the scanner displays the
control channel memory location on the top line, the received
frequency with VC (voice channel) on the second
line, the bank and control channel memory location number
on the third line and the Motorola ID number on the
bottom line.

If you've programmed a text tag in the control channel's location,
you'll get that tag on line 3 instead of "the bank and control
channel memory location number". If you've programmed a text tag
for the talk group ID, you'll get that tag on line 4 instead of
"the Motorola ID number".

You can toggle the fourth line between a text tag and the numeric
ID by pressing TEXT while receiving a trunked transmission. This
applies whether or not you've entered a text tag for the talk
group ID.

If you believe your scanner has ever displayed something different
on the third line while receiving a trunked transmission, then I'd
suggest one of two courses of action:
1. Return your scanner to Radio Shack because its behavior is
inconsistent with the manual and the intended programming of
the device.
2. Hold on to your scanner, as it seems to be something of a rare
collector's item (kind of like a postage stamp with an inverted
airplane).

If anybody can find a keypress sequence that will cause the scanner
to display the bank text tag on the third line, instead of one of
the options listed above, while receiving a trunked transmission,
please share it with the list. This is functionality that is currently
unknown to the PRO-93 world, including the programmer of the scanner.

(Note that the above display information may apply only to Motorola
systems. I do not have ready access to an EDACS system and therefore
cannot comment on the displays when scanning such a system.)

What you want is: Comet Antennas "Miracle Baby" Model CH-32
You will have to go to a radio staore that is for Ham radio operators Radio Shack will not have it or you can order it from the Internet at about any ham radio store such as Burghardt Amatuer Center or Ham Radio Outlet or www.aesham.com
Works best for 800 MHz and is about 3 inches tall. Works goo fro VHF-UHF if you are in relatively close to source such as a city.

I would recommend one of the following (I have both):

(left)P92-4BNX http://www.bncantenna.com/800.htm
It's about 4.5" stubby---works great if you are surrounded by trunk systems and towers.

OR

RH707 2m/70cm . dual-band, tiltable whip, HT antenna. 10 watts, 8 1/4", BNC connector
http://www.rfparts.com/diamond/hand.html

Almost 9" long--works very well and can be used to transmit if you have a HAM radio

The RH77CA on the same page is 15" long but will pull in weak signals the best of all portable antennas I've used---of course you probably won't be using this one on your belt!!

Hi all,
I was trying to decide between a 93 or 95. I don't need that many memories so thats not a factor. But I was wondering if the 93 will recieve trunking and conventional at the same time like the 95. I couldnt find info on that anywhere.
Thanks in advance.

The 93 and 95 are the same except for the number of channels. Other than
that they both will trunk track and conventional scan at the same time.

Hi all,
I was trying to decide between a 93 or 95. I don't need that many memories
so thats not a factor. But I was wondering if the 93 will recieve trunking
and conventional at the same time like the 95. I couldnt find info on that
anywhere.
Thanks in advance.

That about right if you get a 93 it should cover your needs be aware of one thing the EDCAS trunking doesn't work for Erickson VHF system only for UHF and 800MHZ systems

The 93 and 95 are the same except for the number of channels. Other than
that they both will trunk track and conventional scan at the same time.

The 93/2053 is officially gone from RS, but some store might still
have a few in stock. The 95 is the replacement to the 93. I don't know
what the mobile version of the 95 is.

hello,

i am looking for a shortwave radio, that is not too expensive but has a pretty good size range frequency wise. I am looking to hear frequencies used in iraq and other places as well. I have never had a shortwave radio before so i guess i am considered novice for shortwave. if anybody has any ideas or recommendations i would accept some help. also some links to sites that have good prices on shortwave radios.

thanks,
zach

Thanks for the replys. Anyone have a Pro 93 or 95 for sale reasonable out here, please email me off list. Thanks.
I noticed the Pro 93 is still on close out for $119. I will probably end up just getting one so I can get the warranty.

Also to any hams out there, will the Yaesu VX-5 ADMS programming cable work for the Pro 93 -95? Has anyone tried it? Just curious.

Thanks again.

Zach,

I have an older general coverage receiver I'm selling
for $59.00. It is a Kenwood R-1000 Communication
Receiver. It covers 200 kHz-30.0 Mhz and seems to be
working just fine. For a picture, go to the web site
www.tert.org and look at the "gear section." Comes
with user and service manual.

hi zach,
radio shack is closing out a nice digital radio the dx398 - for get this, $29. it was over a hundred before. digital tuning, military timing, sleep timers, presets, and recieves real well. i thought it was a heck of a deal for 29. got two, can throw one in the bathroom for that price. i think sangean makes them for rad shack. this is a dang nice radio.
hope this helps you or someone else.
now, you got a pro 95 for sale cheap? LoL

1) what town(s) do you want to listen to?

2) what services do you want to listen to?

3) what kind of system do they use: conventional, or
trunked?

4) if they are trunked, are they EDACS, Motorola, or
digital?

5) What make and model radio are you using?

Start here first and i'll try to help you.

OK, we can start here, and since conventional scanning is, at least to me, simpler than trunked I'll start there---

look over the freqs for the county.... look at the service codes and compare the freqs... does it seem like they only use a few freqs but with alot of different cities? This would lead me to believe they do county wide dispatching and by plugging a few channels in, i'd be able to hear several cities within the county... As for the diffrent station types-

Base- a transmitter located in one fixed spot
Mobile a transmitter that moves, like the radio in the cop's car.

Base relay- a point to point transmitter located at a fixed spot to rebroacast traffic on certain freqs to increase the range of the base.. ie- a 'repeater'

mobile relay- a repeater just like above except this one is mobile, probably the handheld extender mounted in the cops car to extend the range of his handheld.

on a conventional system focus on the freqs for the base.. (depending on the band, these freqs are either 3 or 5 Mhz LOWER than the mobile freq.) With repeaters, the base side will broadcast both sides of the convo, the cop and the dispatcher...

if you happen upon a scene, and are within a close distance then try listening to the mobile side of the conversation, some areas use these freqs as 'fireground' 'onscene' or 'tac' channels and you can pick up more detail here than on the base side. Again these channels are normally very low power and line of sight, and only on conventional systems.

read thru the sront section of the police call guide, they have a great beginners section that will give more details on what i went into here.

Zach,

I have the Radio Shack DX-398 and Sony ICF-2010. You can get a used ICF-2010 on Ebay for around $200-$250. If you can get your hands on one of those, you'll have the best portable sw radio money can buy.

Radio Shack is closing out the DX-398 (if it's not already gone). It's the same as the Sangean ATS-909. It is a nice little radio, although beware, it has very, very poor sensitivity if you only use the whip. Buy the 23-foot reel-type antenna from Radio Shack, and your 398 will be almost as good as a 2010.

Don't mess around with any of these handheld "wideband receivers" if you really want to hear shortwave. I have one, and it's a lot of fun, but the sw radio band is almost a joke.

Good luck,
Mike

Zach,

If you want to really stop having problems with your antenna bugging you while on your belt, Get 2 bnc 90 degree connectors from Radio Shack, or another electronics supplier. Place both between your scanner and the antenna. This will allow the antenna to sit parallel to the radio hanging in a downward position. Then put a rubber band around the radio with one of those purse closure wire holders to secure the antenna to the scanner and you are ready to go. When I started to use this I did not use the rubber band and wire holder, I lost an antenna. Since I started with the rubber band and wire holder I have had no problems. It does not affect your reception.

Or just get a BNC connector and put a piece of wire on the center conductor part, and have that hang down the side of the radio. Its flexable so it can move as you move, and if you rip it off its only wire, stick a new one in there. 6.5 inches is about 1/4wave 450mhz, you can adjust for whatever your target is, but that length works for me well enough for every band in my area.

Nick

Hey Zach,

I don't know how much money you want to spend, but here are some options. I have both of these radios:

Radio Shack DX-402 - I got mine at closeout price of $49.00
Coby CX CB12 - I got mine at biglots for $7.99

It really depends on what you're looking for, how much you're willing to spend, etc.

If you have any questions about my radios email me and I'll tell you anything that I can!

~~~~~~~Surfing Radio Frequency Waves~~~~~~~
Celt Chic - WA9012SWL - Shortwave Listener and Proud of it!
Radio Shack DX-402
Radio Shack Pro-95
Radio Shack TRC-499
COBY CX CB12 (cute!)
email me at internetstuff47129@... (but first remove nospam)

From: gadair190
Topic: 6614 Message: 6667

As far as I have discovered. If the MODE is set to MOT the bank is set to MOT and you are scanning, it will not receive. I have not tried it if the bank was not trunked. If you are in manual, then that channel will open if there is a transmission on it.

With all the frequency guides around, you should be able to tell if its trunking or conventional, but if you are unsure, trial and error.

For a given agency, you need to enter all Trunked frequencies. All of them are used. There is an embedded control signal which will keep track of the conversations and trunk accordingly. Most guides will tell you whether a set of frequencies are trunked or not. Most times they will also give you the group IDs. If you set your Scanner to FM and it is trunked, you will not get the Group ID , and if you happen to get one of the frequencies when a control signal is being sent, It will hurt your ears. Look in the user guide on Trunking.

On the PRO-93, PRO-95, and PRO-2053, you don't have to enter all of the frequencies for a Motorola system. You only have to enter the control channel frequencies. For example, if a given system uses a total of 12 frequencies, perhaps only 3 or 4 of them will be potential control channels. You only have to enter those 3 or 4.

If you use trunkedradio.net to get the system frequencies and talk group IDs, you'll notice that the control channel freqs are listed in red. Those are the ones you have to enter. You can ignore the remainder (voice-only freqs). You should, however, periodically check back with trunkedradio.net to see if the control freqs have been changed. (You could also enter ALL of the system frequencies, not just control channels, so that the scanner will always get the CC; however, it's been my limited experience that the freqs used for CCs don't often change).

Of course, none of this applies for EDACS systems - you must enter all of those systems' frequencies (in the correct LCN "slots").

>given system uses a total of 12 frequencies, perhaps only 3
>or 4 of them will be potential control channels. You only have
>to enter those 3 or 4.

In Toronto, for example, there are a total of 10 or so control channel frequencies for 4 different towers and well over 100 talk groups, covering both Police and Fire. For example, the Police Dog Unit has a talk group, the Fireboat has a talk group, the Horses have a talk group, and so on.

The only frequencies entered are these control channels. The talk group IDs are also entered but that, using Don's lovely program, has nothing to do with the channel usage.

In the rest of the bank, I use the channels for NON-Trunked frequencies, labelled either as FM or AM. I then CLOSE the Bank. If, in going through the bank there is no activity on the Trunked system but there is activity on the non-trunked frequencies, I get those non-trunked frequencies. I can see this by looking at the information I get on screen.

However, I would recommend NOT mixing them if you can avoid it in your area, since it is then easier to discriminate via turning banks on and off. The choice, of course, is often based on what you want to listen to, and how much is available where you are.

6678. re PRO-93 scanning/CB/Marine bands

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-27 22:28:49 UTC
From: hjaynes1@aol.com
Topic: 6678 Message: 6678

On my PRO-93, when I click through on the Search button and get on either the Marine or CB band, the unit does not scan. If i want to go through the frequencies, I have to hit the up or down scan buttons. Is this normal? Secondly, it is RARE I pick up anything on the CB channels.....I can drive up and down 95 and not pick up anything for hours....this can't be normal...I would think I shouldn't have to have another antennae to pick this up driving down an interstate. Any thoughts?

Hey Harold,
When you are in marine or cb band to switch between search mode and manual mode hit func then search, it will say S or M on the display. S is search, M is manual. I live right outside of Philly,PA (8 miles). I can't pick up much cb traffic either. The antenna that comes with the scanner (duckie) is not great for am frequencies. check around the internet for antennas. you might want to put an antenna on the roof of your vehicle and/or house if you don't already. I don't have any antenna's on my car or house, but from what i have heard it helps alot, especially with cb channels. hope this helps you.

Zach and others- The mode of the RF signal isn't really what your are thinking here I know.

Yes the CB Service is in Amplitude Modulation (AM) but the real reason the PRO-93/95 performs so poorly is that at 27 MHz (the CB frequencies) are extremely long wavelengths as compared to say 154.000 MHZ and higher where specfically scanners are mormally used. The antennas (Duckies)that come with scanners are a veriety of Helically wound antennas and although appear to work rather well when using scanners they are very poor performers. The signals associated with us scanner users are generally coming from repaters and high towers or sites and you don't notice the poor performance as signal are extremely strong due to there locations and power.

At 27 MHz an antenna to perform very good would be a half-wave length long some 200 inches but very impractical so the next choice would be the quarter wave at some 108 inches. Still impractical for a handheld but plug a automobile or better base located CB antenna and it performs rather well. And it would perform whether it was AM, supressed carrier AM (a la SSB) or FM.

No intent was to counter anything you said but hope to help those who haven't thought of what might be the reason.

I put in some AM broadcast frequencies (770 kHz, 1210 kHz) after buying my
Pro-95 just recently and it didn't work. I also put in WWV 15 MHz and that
didn't work either. FM broadcast frequencies worked, though they were
distorted, and VHF/UHF TV worked.

I've picked up CB activity with just the rubber duckie, but for the
most part its the same idiot on the channel talking purely for the
sale of hearing him self talk.

The sensitivity of the Pro-95, plus the short stock antenna makes it useless on AM broadcast bands, or SW bands, even if you can program them in. I replaced the stock antenna with a 25' wire and still couldn't get any SW stations. My Yaesu VX-5R received quite a bit with that same length of wire, and even gets AM broadcast stations decently as long as you hold the radio.

You probably already know this, but the Pro-95 only receives in narrow FM, not wide FM, which is why the FM broadcast was distorted.

Where these scanner shine with CB is when there is a traffic jam on the highway. There is usually more time and the targets aren't as mobile and are close. It also easier to get the unit closer to a window. I usually can pick up a trucker telling me which lane is open. I admit it only works well in that short area and as soon as they or I start moving they fade fast. I drove tractor trailer for the govt and we didn't have CB radios so scanners that got CB freqs were a blessing even though not perfect.

A few years ago I had occasion to special order an 11 meter/ CB rubber duck from Radio Shack, but had long forgotten about it until this subject came up. It's about 3" longer than the stock Pro95 duck, smaller diameter, much more flexible, and slightly better on the CB frequencies than the stock duck. I don't know what fraction of an 11 meter wavelength the antenna is but it seems to do OK on all bands. I guess I'll leave it attached for now. Of course nothing I've tried beats my attic dipole, even if it is horizontally polarized while most, or all, of what we monitor is vertically polarized!

Hi Guys & Gals,

I have the Pro-95 scanner and am waiting on my cable from BlackBag to arrive any time now. Has anyone had any luck with adding extended freqs using Win95, and if so, what type of success and/or failures have you experienced? I would like to try going beyong what the filters allow and seeing what this bad boy can do. :) Always take things beyond their limits, ya know? ;)

Any SW freqs? What about luck in the AM and FM bands? I realize some may be distorted, but maybe there exists a freq or two with quality sound. Doesn't have to be Stereo or anything!! (Not that the 95 can do stereo...)

Hi everyone,

I have oodles of freqs but they're not very organized. I'm going to program Win95 when my cable arrives and was wanting to know if anyone already had a nice organized database, spreadsheet, text file, etc, of some freqs for this area that are organized. I live in Clarksville, IN, so I could use freqs from any of these areas: In Indiana: Clarksville, Jeffersonville, New Albany, Georgetown, Floyds Knobs. In Kentucky: Louisville, KY or surrounding areas.

Any help would be appreciated! (I've been to cityfreq.com as well as other sites but figured if someone has already done the work of getting a list organized they could share?)

I have a Pro-95 so a list of conventional as well as trunked could be used.

Pals,

---> Here is my reply to what internetstuff47129 wrote 3/30/2003 1:20:37 AM

The VHF high filter is a bandpass type that is designed to pass 108-225. The UHF filter doesn't kick in until about 406 MHz so from 225 to 406 MHz the signal is filtered out and the sensitivity is poor.

The scanner will tune and receive commercial FM broadcasts, reception will be distorted. FM broadcasts are wideband, while the scanner is a narrowband receiver.

I have had limited success with the Pro-93 because the filter cuts off at about 225 MHz but strong signals can get through. The lower the frequency (over 225 MHz the better or should I say less bad the sensitivity is.)The UHF filter kicks in at 406 MHz and shows sensitivity at that frequency of 0.95 uV or better. For the standard 20db quieting test (done in FM) the following shows that on the very low end of the Military Air Band the receiver is usable but as you go higher in frequency it would take a very strong signal to be received.

Remember this is the voltage of signal from a generator that it takes to cause 20db of quieting on the scanner. You want something 0.50 uV or less to be really usable. From 0.50 to maybe 2.20 uV you can still get some performance but not as much. When you get much over 1.00 it really is not very good for a scanner. 2.20 to 5.00 takes a very strong signal to be received and really is not acceptable for a scanner.

Did some sensitivity checking on my Pro-93 and here are the results:
12 dB SINAD Pro-93 Scanner -- 12/07/2002

Frequency uV

27.185 0.525
49.700 0.230
52.520 0.245
155.070 0.360
159.330 0.280
166.160 0.300
223.940 0.320
224.950 0.400
407.150 0.380
407.950 0.380
408.200 0.350
453.750 0.370
460.150 0.320

6693. different TX/RX freqs i.e. MED 1

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-30 16:59:48 UTC
From: David Perry
Topic: 6693 Message: 6693

Hello all,

How can I scan conversations on frequency pairs which use different frequencies for TX and RX?

In particular, I have read about the nationwide medial / ambulance / hospital frequencies, i.e. "MED 1" through "MED 8." I haven't tried yet, but how should I program these frequencies so I can listen to a conversation? For instance, MED 1 has hospitals on 463.0 MHz and paramedics on 468.0 MHz. If I program one channel as conventional 463, won't I only get one side of the conversation?

Thanks in advance,

Dave

6694. Re: [PRO-93_95] different TX/RX freqs i.e. MED 1

From: Ken Roberts
Topic: 6693 Message: 6694

In some places, these med channels are set up on repeaters, so listening to the repeater side (the 463.xxx frequencies) you will hear both sides of the conversation. If repeaters are not used, then you will have to program both the base (463) and mobile (468) frequencies into your scanner and then scan them in order to hear both sides of the conversation. Even then, you may not be able to hear the mobile units unless you are fairly close to them.

Ken, W4KRR

6697. Locking out only SPECIFIC talk groups

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-30 17:55:17 UTC
From: leonyu13
Topic: 6697 Message: 6697

I'm trying to locate as many talk groups in the Ann Arbor, MI area as possible, so I've been running the scanner in open mode (this is a Motorola system). I've located about 10 talk groups, and it appears that a couple of the groups I've found are used just for data (there is a nearly constant screeching on these channels) and the scanner constantly lands on these. I want to be able to lock these groups out but continue to receive and identify new talk groups. I think I might be asking for the impossible--to have the scanner in open mode but closed just for selected groups. Does anyone know if there is a way to do this, or am I asking for too much?

Thanks

6698. RE: [PRO-93_95] Locking out only SPECIFIC talk groups

From: Don Starr
Topic: 6697 Message: 6698

You're asking for too much from the PRO-93/95. In OPEN mode, all talk groups are received. Only in CLOSED mode are your "locked out" talkgroups ignored.

From: R.S. (Bob) Heuman
Topic: 6689 Message: 6703

I have found, with the PRO-95, that one of the tricks with out of band frequencies is to dial up the squelch to maximum, particularly with wide FM. That makes the signal a lot clearer. While when scanning one tends to reduce the squelch until it is gone, with wide FM, increasing it is a big help. Your milage may vary <grin>... but it works for me with TV audio bigtime.

When I listen to my scanner sometimes, I will hear the same conversation on two frequensies at the same time...they are usually frequencies that are in the police call book for that town...the frequencies do not have a spacing of 5KHz as for base and mobile units. The spacing sometimes seems to be sporadic...can anyone tell me what or why these frequncies are carrying the same info as other frequencies?...They are usually somewhere about 2KHz apart

6712. Re: [PRO-93_95] Digest Number 581

Yahoo group: PRO-93_95 (2003)
Date: 2003-03-31 21:52:51 UTC
From: Stephen Platt
Topic: 6712 Message: 6712

Stacey,

"PL" is the abbreviation for the Motorola trademark name "Private Line".
This is also known as the generic
CTCSS or Continuous Tone Coded Squelch System. This is a subaudible tone
that must be transmitted in order to open the squelch of a repeater or
another radio. (**If you use a headset or earphone, you WILL be able to hear
the tone.**) This is used on vhf/uhf systems to keep other distant systems
from opening the squelch of the local system during band openings.

Another instance is more than 1 local user on the same frequency. Only a
company's own units will open their radios' squelch.
For instance, 2 companies may share a frequency. One company may use a PL of
100.0 hz to open the squelch of their radios. The other company may use
250.3 hz to open the squelch on their radios. This way, the companies may
use the same channel without each other's transmissions breaking squelch. It
is common practice in this case to disable the PL before keying the
microphone to make sure there are no transmissions before keying up.

Some scanners may have the capability to decode CTCSS; most do not.
Pro-95 DOES NOT have this capabilty. Once again, if you listen closely
(headset), you will hear the tone, though.
Hope this explains CTCSS for you. 73

Most of the answers here are from scannists far more experienced than I...but I think the first reply to your question missed the target by a parsec or two!

Non-trunked public service systems usually have the receivers in the mobile units tuned to a repeater frequency. Even if a car is parked beside another car whose driver is transmitting, the signal he hears is not the transmitter in that car, it is the repeater. The car transmit frequency is referred to as the input to the repeater.

Normally, you scan only the repeater, because the only low-power car transmissions you would hear would have to be close. The information would be duplicated if you scanned both and could hear the mobile unit, and it would be a couple of kHz off of the repeater frequency. Most frequency lists will give the input frequencies, but they are not commonly scanned.

6715. Help

Yahoo group: PRO-93_95 (2003)
Date: 2003-04-03 19:32:01 UTC
From: Fletcher, Jack
Topic: 577 Message: 6715

In preparation for going to the NASCAR race this weekend, I typed the driver frequencies into WIN93 and then uploaded the frequencies to my scanner. (I have done this before with success) I checked the frequencies in manual mode and they are all there, however, when I press the scan button, my PRO 93 locks up and I can do nothing until I turn it off and then back on. When I try to scan again, my radio locks up.
What have I done wrong??

Thanks for your help.

Jack

6716. Help

From: Fletcher, Jack
Topic: 577 Message: 6716

I was finally able to figure out my problem and boy do I feel dumb!! On the Settings page of WIN93, I somehow (really don't know how I did it) disenabled all channels so that when I turned on the scanner, NO channels were selected to scan. It makes a really big difference when you select at least one channel to be scanned. (I remember reading that in the book but failed to follow the instruction.)

From: whiteflagz
Topic: 6717 Message: 6717

Hi, I just broke my old cell phone apart and tried its small 3 inch antenna on my Pro-95. What I noticed is it can pick up the county trunking system better then original antenna but sometimes it fades out and I head some static in many channels.

I head about this Seeker 800 antenna from radio-ware.com and would like to know if anyone here have one. Is it that good for 800mhz to 900mhz range?

I am thinking of ordering it.

Thank You,
White.

6718. Important Message Regarding Possible Computer Virus

Yahoo group: PRO-93_95 (2003)
Date: 2003-04-06 16:41:25 UTC
From: hjaynes1@aol.com
Topic: 6718 Message: 6718

A virus was passed on to me by a contact. My address book WAS infected. Since you are in my address book, there is a good chance you will find it in your computer too. It is a very nasty new virus that Norton, nor Mcafee will detect. It sends itself automatically to people in your e-mail address book, and any contacts you have on messenger. It goes undetectable for 14 days, then it goes off and really messes up your computer. Here are the instructions to check whether you were sent a message by me (yes my computer was infected):

Please follow these instructions to make sure your email system is clear. Sorry for this inconvenience.

The virus (called jdbgmgr.exe) is not detected by Norton or McAfee anti-virus systems. The virus sits quietly for 14 days before damaging the system. It is sent automatically by messenger and by the address book, whether or not you sent Emails to your contacts.

Here's how to check for the virus and how to get rid of it:
YOU MUST DO THIS
1. Go to Start, Find or search option
2. In the file folder option, type the name jdbgmgr.exe
3. Be sure you search your C: drive and all sub-folders and any other drives you may have.
4. Click "find now"
5. The Virus has a Teddy Bear icon with the name jdbgmgr.exe DO NOT OPEN IT!
6. Go to Edit (on menu bar), choose "select all" to highlight the file without opening it.
7. Now go to File (on the menu bar) and select delete. It will then go to the Recycle Bin.

IF YOU FIND THE VIRUS, YOU MUST CONTACT ALL THE PEOPLE IN YOUR ADDRESS BOOK, SO THEY CAN ERADICATE IT IN THEIR OWN ADDRESS BOOKS. AND CONTACT PEOPLE YOU HAVE IN MESSENGER.

To do this
a) Open a new e-mail message
b) Click the icon of the address book next to the "TO"
c) Highlight every name and add to "BCC"
d) Copy this message enter subject paste to e-mail

I'm terribly SORRY for the inconvenience.

A virus was passed on to me by a contact. My address book WAS infected. Since you are in my address book, there is a good chance you will find it in your computer too. It is a very nasty new virus that Norton, nor Mcafee will detect. It sends itself automatically to people in your e-mail address book, and any contacts you have on messenger. It goes undetectable for 14 days, then it goes off and really messes up your computer. Here are the instructions to check whether you were sent a message by me (yes my computer was infected):

Please follow these instructions to make sure your email system is clear. Sorry for this inconvenience.

The virus (called jdbgmgr.exe) is not detected by Norton or McAfee anti-virus systems. The virus sits quietly for 14 days before damaging the system. It is sent automatically by messenger and by the address book, whether or not you sent Emails to your contacts.

Here's how to check for the virus and how to get rid of it:
YOU MUST DO THIS
1. Go to Start, Find or search option
2. In the file folder option, type the name jdbgmgr.exe
3. Be sure you search your C: drive and all sub-folders and any other drives you may have.
4. Click "find now"
5. The Virus has a Teddy Bear icon with the name jdbgmgr.exe DO NOT OPEN IT!
6. Go to Edit (on menu bar), choose "select all" to highlight the file without opening it.
7. Now go to File (on the menu bar) and select delete. It will then go to the Recycle Bin.

IF YOU FIND THE VIRUS, YOU MUST CONTACT ALL THE PEOPLE IN YOUR ADDRESS BOOK, SO THEY CAN ERADICATE IT IN THEIR OWN ADDRESS BOOKS. AND CONTACT PEOPLE YOU HAVE IN MESSENGER.

To do this
a) Open a new e-mail message
b) Click the icon of the address book next to the "TO"
c) Highlight every name and add to "BCC"
d) Copy this message enter subject paste to e-mail

I'm terribly SORRY for the inconvenience.

I realize that this may be a stretch but ...

Who has the source code to chip inside the Pro93? What language? What compiler?
What is the microprocessor?
How is the firmware upgraded?

Who at Radio Shack/GRE can we contact to see if they will "sell" or otherwise make available the source code to the Pro93?

I would be willing to give it a good hard shot if I knew who to contact.

Thanks,
Russell

GRE, who makes the scanner, has the source code.

It is proprietary. They will not release it.

You could try e-mailing customer service at Radio Shack and ask. I got programming information for the PRO-64 that way. I tried the same thing for the 92, and was told "Sorry, proprietary." Never tried for the 93, since the encryption pretty much says they're keeping secrets. But you can never tell what someone on e-mail duty might do.

It's a good thing I had figured out the 64 myself before getting the material RS sent me. The stuff was written in "Jenglish," and would have thrown me way off had I tried to comprehend it. :-)

FWIW, RS did put a non-disclosure stipulation on what they sent me for the 64. The information on my web site was figured out within the scanning community before getting that document.

Thanks for everybody's reply. If I knew who to contact I would pursue. Believe it or not, my intentions are honorable. I would like to reprogram a key to let me go directly to a talkgroup rather then wait for a transmission; I would lock out talk groups in open mode; I would like to do some other sensible things that would make our scanners even better.

I could care less about cellular, especially since much is digital now anyway. I work in a sea of cubes, I hear other people's conversations all day. The most boring type of conversation is a cell phone call. Silence is golden. Gimme a police call or fire call any day.

Thanks,
Russell

6735. Pro 95 programming question

Yahoo group: PRO-93_95 (2003)
Date: 2003-04-11 16:50:10 UTC
From: n0jams
Topic: 6735 Message: 6735

Hi All,

I got a 95 the other day, and I'm quite pleased with it.
I'm having some problems useing the PC program to read from the radio, and would really appreciate some help.

I keep getting the error message, "timed out waiting for header" from most all the settings in the program. Different ports etc. And the 3 different cable settings.

Perhaps I am doing something wrong. The help menu of the program seems to be missing, (F1 command) so I'm not sure how to operate it, just been guessing.
Do I need to push any buttons on the radio for the PC to read it? I did try, up and 1 but the program pops up the timed out waiting for the header message before it transfers the data.

Also I am useing the Yaesu programming cable, which some have said works fine.
Any help would be most appreciated.

Does the cable end in a mono plug? If not, you'll need a stereo-
to-mono adapter.

When you start the download operation, does anything happen on the
scanner? You're not pushing any scanner buttons, are you?

Can you upload to the scanner?

Did you buy the cable and a cd-rom from radio shack? If you did you
have the wrong cable and software. Search database of this group and
you will find a lot of locations for a suitable cable and some pretty
good freeware programing options.

Thanks for the help with the programming cable issue. As suggested it was a sterio to mono adapter that was needed to make the Yaesu cable to work.
Again many thanks,

Topic: 6743 Message: 6743

Electromagnetic Interference (EMI): Any electromagnetic
disturbance that interrupts, obstructs, or otherwise degrades or
limits the effective performance of electronics/electrical
equipment. It can be induced intentionally, as in some forms of
electronic warfare, or unintentionally, as a result of spurious
emissions and responses, intermodulation products, and the
like.

I have a small desk and my handheld scanner is 18 inches away
from my PC. I get EMI from the computer. It helps when I set the
ATT on my radio, but I listen to simplex frequencies.

How is EMI pick up? Via the rubber duck or the radio itself. If its
the rubber duck, hows about setting up a remote antenna.
Radio Shack Magnet-Mount Mobile Scanner Antenna for one.
Also at they are selling this antenna base that sticks on to
windows. With BNC conectors at both ends I can place my
rubber duck at one end and the BNC connector to my Pro-95. Its
also a lot cheaper.

Also I see super telescopic antenna for sale. Hows it compare
to a magnet mount mobile antenna for a hand held scanner at
home?

6744. Pro-95 battery warning

I have been using NiMh batteries in my scanner and have noticed something.I get good performance from them but when they get low,I get maybe 1 beep and then the scanner starts going on and off.After recharging,everything is fine.From reading the manual it sounds like you should get the low battery warning and then have at least a little time.Has anyone else experienced this?

Norm,

What you're likely experiencing is the "knee" in the discharge curve of NiMH, and NiCad, batteries. I first noted a similar occurrence in my ham radio HT's (handie talkies) NiCad battery packs and was told by a fellow ham that the discharge/ voltage drop of such batteries is gradual until it reaches the "knee" in the curve, then the voltage rapidly drops toward zero. Once you hear that beep in the Pro95 the voltage drops off so fast that you may hardly have time to notice! Alkalines have a more gradual curve over their lifetime so you would have more time to secure replacement batteries before the radio becomes inoperative.

The nicest thing about the NiMH batteries is that you can recharge them at any point along their discharge curve (that is, as often as you want) without the life-shortening memory effect of NiCads, not to mention the higher capacity in the same size package.

Hope this helps!

I wasn't referring to modding the 64 - just how to communicate with it. That's how load64 came into being. The programming protocol is on my site

http://members.cox.net/kplotkin/scanner.htm

under "64/2041 programming protocol."

But as long as you're thinking of mods, and getting military bands...it's probably not possible. Or, if possible, probably even less practical than Win93/95's 93/95 military band capability. Take a look at "Newt special ;-)" on my page. (FWIW - I've never tried this myself, but have been assured that it works. This page has also been copied to that Danish mod site, so I may eventually remove it from mine.) That enables part of the cell bands. It appears to be image reception made audible by changing the filter arrangement. You'd need to work out image frequencies for the mil band. But you'd be stuck without a filter for that range.

Ken

Thanks Ted.I was wondering if it was just characteristic of the hydride batteries.What you said makes sense.Also it is possible there are other beeps and I'am missing them.Sometimes a beep will sneak thru a trunked broadcast and so I don't pay much attention to them.Also you may know the anwer to this.I noticed a slight brown smudge on the lcd screen about where the # 7 bank indicator is.After recharging the batteries,it was gone.I'am thinking the lower voltage was causing it.Oh well!Thanks again

6752. Almost forgot another ? Has anybody used the "purple" cable

Yahoo group: PRO-93_95 (2003)
Date: 2003-04-15 03:58:23 UTC
From: chiefhelicfi
Topic: 6752 Message: 6752

I was wondering if anybody has used the "purple" cable with a USB adapter and if there was any real speed increase?? i have my com port set at 128,800 and it doesn't seem to load the frequencies any faster than at 9600 baud. Don't get me wrong, I can still load almost 800 frequencies in less than about 1 minute.
On a side note. I got my pro-95 scanner in the mail today(bought it new off of e-bay), i opened the box, put batteries in it, connected the "purple" programming cable, and since i had already installed Don's Win95 software, I already had a .P95 file ready to go. In less than 5 minutes, from opening the box to listening to my local police frequencies. AMAZING. I haven't even broke the plastic on the instruction manual yet. This scanner replace my old AOR 1000, for those of you that remember, it was 1000 channels, shortwave to microwave, and yes, i could listen to the BBC or Russia on the west coast with just a roof antenna. BUT, the pro-95 BLOWS the AOR away as far as sensitivity and spurious birdy rejection. I fly a newscopter for a living and sometimes i need to program the pro-95 on the fly, so to speak, and this group has provided many good .P95 files, keep up the good work, and i'll try to contribute some my own files as time goes by. I've already contributed on the Shasta (redding, ca)/tehama county and it works fine.

From: Ed Hennessy
Topic: 6754 Message: 6755

I've ordered an S3 model of The Pouch (www.thepouch.com). I've used their neoprene and nylon cases for a long time for various ham HTs, and they are durable and protect well (plus they are washable).

The S3 doesn't appear on their page, but they confirmed that they still make it. The S3 was originally designed for the Bearcat 235XLT, which is 1/8" wider and 1/8" shorter than the PRO-93/95. You can hear the speaker through the neoprene without too much loss of volume.

The cases are $19.95 plus shipping. They come with their own nylon belt strap and buckle (to fasten without removing the belt) or for $1 more you can get a metal belt clip. Pictures are on the website.

I expect the S3 to work just fine for my PRO-95. I should get the case any day now.

Ed Hennessy

The LCD screen has (like all of them) a polarizing filter built into it. Any deformation of the screen affects the polarizing effect. The "known factory defect") is NOT; you were wearing polarizing lenses, such as sunglasses, when you noticed the "smudge," and were not wearing them when it was gone. The battery voltage was not causing the effect.

Joe

6762. Antenna for the Pro-93/95

Yahoo group: PRO-93_95 (2003)
Date: 2003-04-16 20:14:03 UTC
From: mfes911
Topic: 6762 Message: 6762

Here's an idea. I am using an actual Motorola 800mhz and an adapter to the BNC connection. 800mhz antennas, and the adapters, can be found at better radio shops; not Radio Shack.
The 800mhz reception is dramatically better than the rubber duckie. UHF and VHF is about the same because the overall length of the antenna is actually increased.
I listen in the Greater Toronto Area and Radioworld has the parts.
FYI, Ran.

Subject: Anybody know of any nice cases for the Pro-95

As a matter of fact, I was in rad shack yesterday and got a nice padded case they have on close out for 48 cents. A real schmeal deal.
It fits the 95 nicely, and has the top open with a velcro strap holding it in place. The front has small perforated holes for the speaker audio. And a belt strap. Hope this helps you.

They also have some frs cases that fit most small hts like the vx5 etc for a dollar.

You have to be sure that the data slicer you are conncting the Discriminator has a .01 mf capacitor is series buil into the slicer or you must have a capacitor connected to the IC point of the discriminator. It must be isolated and not with just a resisor as some think.

I would also check and be sure the output jack was not a shorting type. What I mean is that some jacks are designed to short the two connections in the absence of a plug.

NAME: jdbgmgr.exe virus hoax
ALIAS: Teddy Bear hoax

NOTE: A worm has been found that actually uses the jdbgmgr.exe
filename! For more information, please go to:

http://www.f-secure.com/v-descs/recory.shtml

NOTE: On 21st of May 2002, a new virus using this hoax was found. The
virus sends messages coming apparently from Symantec corporation and
contains a warning on the JDBGMGR hoax - plus a virus attached to it.

In April 2002 there appeared a hoax message concerning a new virus
that was reportedly discovered in Windows utility JDBGMGR.EXE. The
jdbgmgr is a standard windows component that is found in every
windows installation, it is used as Java debugger manager in
Microsoft Java runtime engine. The icon of the original JDBGMGR.EXE
file for some reason looks like a teddy bear:

We checked several versions of this utility from Windows
installations and found nothing malicious in them.

Please ignore this hoax or anything similar warning about jdbgmgr.exe
and don't pass it on.

Basically what you are doing is picking up audio before it is filtered (for voice quality) from the scanner to feed into your computer to decode tones. The most popular application for this is to decode trunked control channels (to read the information or to control another scanner to follow the trunked system). Other applications can include ham digital modes.

You want to pick the tones off before they are filtered as the filtering cuts out some of the tone and makes it less useful for decoding. You then feed that audio from the discriminator tap to either your sound card on your computer or a FSK decoder normally called a slicer.

There a several softwares that use the sound card (line in) from the discriminator tap but there are others that require a interface to the serial port called a slicer. There are two types of slicers, one is a 2 level that is used for trunking systems and most ham modes, the other is a 4 level that is used for pages and things like that. (not legal in the USA)

You can find a number of slicer construction details on the web or you can buy them ready made for around $30.00 (2 level). Here is one link you might try but a web search will turn up others for you:

http://n7olq.home.att.net/Radio/Slicer.htm

I hope this helps some

Mike

If you own a pro-93/95, you already own one. A discriminator is used to process the audio contained in an FM signal.

Contrast this with a detector for AM.

Connecting to the discriminator can mess up the impedance match between it and the previous stage of the radio. This results in poor signal transfer to the discriminator, resulting in reduced sensitivity.

I challemge this statement. If properly installed with a capacitor the capacitor present a high enough impedance that the audio is unaffected to the point the difference can only be detected with precision test equipment. I put an IFR 500 Service Monitor on my PRO-93 and 95 and pumped as low .1 microvolts both before and after and saw no change.I am assuming you are refering to sensitvity of RF.The output of the discriminator has been detected already and audio signals ,raw audio signal not RF is what your are wanting to gain accsses to.

The trick is "properly installed" and using a resisitor as opposed to a capacitor is where you would see this problem arise. The resisitor will affect the impedance to to the resistance value of the audio output of the IF IC. A capacitor has no resistance to cause this problem.

6791. RE: [PRO-93_95] FDNY Scanner Stream

Yahoo group: PRO-93_95 (2003)
Date: 2003-04-19 17:36:20 UTC
From: Don Starr
Topic: 6775 Message: 6791

To commit yet more physical violence against a formerly animated
equine:

Yes, 192.168.x.x is one of the assigned private network spaces:

>From RFC 1918:

Section 3: Private Address Space

The Internet Assigned Numbers Authority (IANA) has reserved the
following three blocks of the IP address space for private networks:

10.0.0.0 - 10.255.255.255
172.16.0.0 - 172.31.255.255
192.168.0.0 - 192.168.255.255

These ranges are typically used by anyone who wants to set up a local
network (e.g. businesses, me, etc.). These addresses are not supposed
to be routable across public networks:
Because private addresses have no global meaning, routing information
about private networks shall not be propagated on inter-enterprise links,
and packets with private source or destination addresses should not be
forwarded across such links. Routers in networks not using private address
space, especially those of Internet service providers, are expected to
be configured to reject (filter out) routing information about private
networks.

-Don

--There are 10 types of people in the world: those that understand binary
and those that don't.

Because I clicked the "Reply" button to answer.
Don't you like to know the subject so you don't need to bother
opening it if it's something of no interest?

Hello: I have been out for a while, but have a quick question.

Is the programming software that was once available sold to a company or something?? When I was last around, one could get pro92 and pro93 software FREE??? I have both of the old programs on my PC (Win ME), but I now have a laptop with XP, and would like to run the pro93 software on it. IS there software for XP?

I need pro 93 software for Win XP, and also need to know if pro 92 software is still avail for Win 98?? I let my bro in law borrow my 92, and he needs the software.

Thanks for any help, BW

Yes, it's different...no Alpha Tags, made by a
different manufacturer (Uniden), 1000 ch. split into
two banks of 500 split into 10 banks of 50...depending
on which version you get, the PRO-94 will NOT scan
trunked and conventional at the same time. The PRO-94A
WILL. The PRO-94 is NOT computer programmable...

Hope this helps...

Son is living in the San Diego County (NOT SAN DIEGO CITY PROPER) RCS area (works in Encinitas and lives in Carlsbad) but also starts work for Orange County Fire Dept. in about two weeks. I thought if I showed up there early next week with the PRO-95 all programed....it would be of some interest for both of us to listen to Orange County prior to his job start. He hasn't got an initial station/city assignment yet. He expects he will be moving around Orange County for a while.

I did a search for both San Diego County and Orange County. The San Diego stuff looks straight forward and "current" (County Wide Regional system, Motorola Type II, a hybrid analog / digital system, mostly still analog, a North and a South area with their own seperate trunk groups) ????????????

Orange County on the other hand looks totally confusing. Some sites make mention of Motoral TYPE II SMART ZONE SYSTEM ID 6C3F
(http://home.earthlink.net/~kenjicam/orco.htm)?????

I found several other web sites that refer specifically to Orange County Fire and Orange County Fire Authority - Trunked Radio Systems that seem to compare well and focus on the Fire Dept ?????? (see: http://www.freqofnature.com/frequencies/ca/orange/ocfa.html last updated Nov. 2002) ????? I am just having a tuff time understanding how the OCFA - Trunked Radio System works......is it Motorola type II ?????

6811. Re: Louisville, KY area freqs?

Yahoo group: PRO-93_95 (2003)
Date: 2003-04-21 20:40:01 UTC
From: fmon1
Topic: 6690 Message: 6811

Sorry for the delay, Stacey.

On the date of your posting, I departed on a trip, which took me through Louisville both directions, and I'm just catching up on the board. We spent one night at the Kentucky Horse Camp in Lexington on the return trip.

The Pro-95 cannot use this feature, but here is the wording out of the Pro-92 manual, which does. Coded Squelch Mode for PL, DPL and Trunking. PL mode sets the scanner to decode subaudible tones that are transmitted with many FM transmissions. These tones are used to allow multiple users to share a single frequency and to prevent interference form other systems operating nearby on the same frequency. The range for these tones is from 67 Hz to 254.1 Hz.

Many listed in my Excel sheet, which this feed is about, are likely shared by surrounding counties or even used in nearby Indiana counties.

One example would be many hospitals in the same area using the same freq. Each will have a subaudible tone so the Medic Vehicle and Emergency Room are able to communicate at the same time another Medic Vehicle and Emergency Room is communicating on the same frequency.

BTW, I've use the term Medic Vehicle due to the apparent recent change from EMS to Medic in my area and others. I suppose this is due to the realignment to meet the new Home Security standards throughout the country.

Frank

From: littleroot
Topic: 6813 Message: 6813

Hi there and Hello!

I think this is the first message I've ever posted here but I've read the group often. I hope you do not mind if I ask for some help.

Two things happened when I was at a racing event recently:

1: I used the search function but when I found a freq I liked I could not see how to store it to an open channel. I instead wrote it down and then went back and manually programmed the freq.

2: I wanted to search a specific range, from 400 to 500 and instead had to search the entire range (limit search?).

Thanks,

-Bob

6814. RE: [PRO-93_95] Saving seached freq?

Yahoo group: PRO-93_95 (2003)
Date: 2003-04-22 20:55:51 UTC
From: Jack Anderson
Topic: 6813 Message: 6814

Two ways to do this:

Press FUNC ENTER to store the found frequency in the next empty channel in the selected bank (defaults to Bank 9)

or

Press FUNC PROG to store the found frequency in the selected bank and channel (e.g. FUNC ENTER 1 2 3 ENTER puts it into Bank 1 Channel 23)

Using PAUSE will buy you a little more time to get it stored.

Date: 2003-04-23 21:01:11 UTC
From: shannon ratigan
Topic: 6815 Message: 6815

I was wondering in the scan search ranges if I can change the step size in the 900 mhz.
It defaults to 6.25 and I can't find a way to change it in the manual or with the software. Is it possible?

Also when the trunking, the banks come alive I can't see the banks name. It is in there when I manually tune to a channel, but wont show up when it scans and stops on one. We have 6 different systems and I'd like to know whats what by looking at them. Again they do show up in the software. Do I need to title each freq to get that?

Thanks for the help.

Topic: 6815 Message: 6816

The step sizes in the search ranges are fixed and cannot be changed.

When the scanner stops on a trunked transmission, it displays the control channel's alpha tag on the third line. The bank alpha tag is not displayed (there's been some debate about this recently, but no one has been able to produce a means by which the scanner can be told to display the bank tag). You can "fake" a bank tag display by giving the control channels alpha tags that describe the system. (This assumes a Motorola system - I don't know what's displayed when tracking an EDACS system).

EDACS is basically identical. I put in alpha tags that tell me what I am
getting OR because it is a specific BANK I know what I am getting.

For example, Bank 0 is all Police, Bank 1 is all fire, Bank 2 is all EMS,
Bank 3 is all airports, bank 4 is all railroads, and so on. Since I do get
the talk group ID when something is trunked, and can see the bank number and
the particular channel if I really care, I know what I am hearing as a
result.

Your milage might vary...

From: realsquash
Topic: 6798 Message: 6822

The pro-94 is indeed made by Uniden. There is no compelling reason to get a pro-94 as far as I can tell. I own a pro-94 and in side-by-side tests with just about any other scanner I've come across for conventional scanning it pales in comparison. I've yet to mess with the trunking capabilities on it.

I've added a discriminator tap to it, also. That seems to work pretty well but the sensitivity in the 160-161mhz railroad freqs (where I usually scan) just plain sucks. It's almost appalling to think I put up with this scanner for 2 years!

Andy
p.s. don't buy a pro-94 ;)

For a 30 foot run at 150-160MHz regular RG-58AU foam cable will work just fine.

The more expensive cable is only needed if you operate in the UHF and 800MHz trunking bands.

Same cable for both, and search for Don Starr and you will find his free
software. There is also a conversion program so the PRO-93 file can be
converted to and loaded into the PRO-95

As to the coax question, I would suggest LMR-400 flex. Not much more money, about the same or better as far as loss, and most importantly is much more resistant to water damage and the suns ultraviolet rays. Unlike Belden 9913. Something to think about if you are in a sunny or rainy climate, like here in FL.

Can using the wrong antenna screw up your Pro-95 scanner? My brother gave me an antenna and if trying to use it for a while I gave up. Now it seems that the a number of channels I have programmed in don't work anymore. By that I mean it sounds like they are digital frequencies. I get the same sound like I get when I listen to Motorola trunking control channels. I listen to mainly marine and railroad frequencies. Any thoughts?

Thanks,
Mitchell Ryan

Antennas will not "screw up" a scanner... The scanner does not
transmit, so there is no way it will affect it, unless you introduce
power from an improperly wired preamp... Only by sending voltage to
it will you mess something up...

6837. 3rd line changes to ID sub-bank

From: Ryan
Topic: 6837 Message: 6837

I'm having a problem that I can't seem to correct. This just started happening, I've had my scanner for 4 months now. The third line on the pro95 changed on me to something with the talkgroup list. It shows which sub-banks are on when traffic comes over the scanner. I corrected this by pressing 'Function' 'Trunk' while it stops on a transmission. It still changes back by itself sometimes. I don't touch anything and it goes back to the talkgroup sub-bank list. I then press Func then Trunk again and it changes back. I have each control channel labeled with a text tag and that shows on the third line with the talkgroup on the fourth. Can someone tell me whats going on and how to make it stay like it has been. It is getting agravating changing it back every 15 minutes. Thanks in advance.

The Pro-25 is worth what the market will pay. Look on Ebay for prices
of other similar radio's.

Your second scanner may have a loose contact where the battery
terminals connect, or loose contact where the AC adaptor plugs in
which may also disable the battery circuit.

What is the brand of the second radio?

Frank

I just put a Pro-93 on Ebay that has plenty of good parts inside...
It is a "parts radio" in regards to the fact that the original owner
put in the fancy alkaline batteries in the rechargeable pack... Its
blown some resistors and the back PC board is acid washed... I am
quite sure your part is inside if you still need this component...

I Just Got anantenna from rat shaq cat#20-283 about $15.00. Its an 800mhz but it seems to work bettter than stock on all frequencies. work alot better in trunked systems.

Do you Yahoo!?
The New Yahoo! Search - Faster. Easier. Bingo.

I just got one also. Its a new item at RS. This is the best antenna for monitoring the 800mhz trunking systems that I've found so far. Its even better then the Seeker 800 from radio-ware plus costs half the price of Seeker 800 and about 4 inch shorter.

I am really happy with it :)

But if someone knows a better antenna then this one, please let me know which one is it and where did you get it.

Also, has anyone tried getting a BNC T connector and hooking up two antennas to same scanner? Will it be getting stronger signal?

==========

I have tried this set up with an 800 mhz. antenna on one
side and another antenna for the VHF band on the other. I wasnt
able to tell any difference with one antenna or both hooked up so
I just use the 800mhz antenna. I use mine for 800mhz trunked and
the 155mhz state patrol freqs.

Jeff

Hooking two antennas opens another can of worms. Depending on the length of the connecting cables you can end up with an array that receives better off the ends, or with a different length, best off the side. A random length may also provide conditions that are worse than a single antenna.

Next one has to consider impedance's. Two 50 ohm sources into a T-connector produces 25 ohms at the receiver unless fed though a matching section.

Two antennas for different bands may be fed in this way and normally works pretty well. If your interested, I can give you the theory of why this is so.

Fred your above statement about impedance does not apply in Ohms Law.
Impedance is not pure resistance but a product of induction,
capacitance and resistance matching an unbalanced line and terminated
in the antenna. In a transmitter matching impedance is critical for
its safe use.

Phasing is the problem one must deal with when using two antennas with
the T-connector. This phasing will produce a pattern around the
transmitting/receiving area in various directions depending on the
location the operator places each antenna. Moving either antenna will
produce a different receive pattern.

Truckers us "co-phased" antennas. That is, one antenna on each mirror
tuned exactly the same including the length of cable from each to the
receiver. This arrangement allows a strong pattern fore and aft while
rejecting signals on either side. Keep in mind both of their antennas
are tuned to the same wavelength, while this discussion is about two
antennas out of phase. Thus rendering tuning nearly impossible.

little basic juice

The reason to co-phase on a truck is to get a full ground plane. With only one antenna on the side you will not receive or transmit to the side the antenna is on. If the antenna's are not mounted 108" apart, you will make a beam pattern.

You won't mind if I respectfully disagree. The co-phasing is a neat way to double antenna sales and not much else.

When an antenna is resonant (Xl=Xc) the resultant is pure R, and unless ohms law has been repealed my original statement stands correct.

I will grant you that the resultant Z can vary depending on the ground plane and it's angle relative to the vertical element.

As far as your statement on phasing, I see no difference between what you are stating and what I said in broader terms. I stated that different lengths (read phasing) gave different results.

None of which matters to the gentleman with two antennas connected to his scanner. He wants to know what time it is, not the history of clocks. Randomly connecting two antennas on the same band via a t-connector yields indeterminable results. You may calculate those results, knowing the type of coax, velocity factor, and physical length, and the frequency of interest.

Given the broad range of frequencies, I am not smart enough to design a matching harness that works over several decades. Over a narrow range of frequencies, I can do it quite successfully.

Just as an aside, my oldest son is a truck driver. I both patterned and measured field strength with a single and "Co-phased" array. The Truck was a Kenworth, and like most today has a fiberglass cab. For all practical purposes, nothing was gained by co-phasing, and in fact, field strength to the front was worse. Your mileage may vary. The real problem is an inadequate ground plane. A small mirror bracket mounted on a door leaves a lot to be desired.

My experience with antennas is limited to just over 45 years as a ham radio operator. I don't pretend to now everything, but I do have a reasonable background in antennas.

I think the OP was talking about the leading zeroes added by Win93
in the Talk Group ID (not the alpha tag).

In reply to the OP: yes, it's normal. Win93 always displays a fixed
number of digits for a given ID format, adding leading zeroes to
"pad" the display.

Sorry , looks the link to Radio Shack didn't work. Just go to
www.radioshack.com <http://www.radioshack.com/> and search for 20-283 for
description.

I just got one also. Its a new item at RS. This is the best antenna
for monitoring the 800mhz trunking systems that I've found so far.
Its even better then the Seeker 800 from radio-ware plus costs half
the price of Seeker 800 and about 4 inch shorter.

I am really happy with it :)

But if someone knows a better antenna then this one, please let me
know which one is it and where did you get it.

Also, has anyone tried getting a BNC T connector and hooking up two
antennas to same scanner? Will it be getting stronger signal?

Well, Thank you all for responding to the two antennas joined by a T-Connector question. But I was kinda hoping for Yes or No replies :)

I only listen to trunking systems that are in 865 to 869 mhz range. I have looked at and listened to real police portable radio's and I must say they work a lot better then the Pro-93/95 scanners. The real radios pick up the signal a lot better.

My question is, are the real police radio's built better, meaning they are made to pick up the signal much better then the scanners or is the key in the antenna they got?

I have tried the glass mount and the magnet antennas from Radio Shack and they are not any better then the new 800mhz RS antenna.

So I am still trying to find something that will improve my scanner and let me pick up the trunking systems similar to real Police radios. Otherwise, I have to move downtown.

Thanks all.

Your real answer is an outdoor antenna. The scantenna is a good low cost solution. It comes with everything you need, including coax cable for under $50.00 delivered to your door.

I use one and have been totally happy with it.

Here is but one of many links to it:

The key is the radio. Your $200 PRO-95 compared to a $3000 Motorola.
Wouldn't you expect the Motorola to pick up better?

---> Here is my reply to what whiteflagz wrote 5/2/2003 4:30:22 PM

Yes and yes. The units your police have are more than likely $2000 - $3500 each. They are first of all desinged for a specific frequency range, with higher gain. Next they are built from better components and have a lot more circuity involved. Third, the antenna is designed and optimized for the band they are working in.

Compared to a $145, wide band, scanning receiver they are by far better designed, better built and have a better antenna.

As for antennas, first you did not say if it (the glass mount antenna) was a gain antenna on the 900 MHz band or a 'all band scanner' antenna? If not a dedicated 900 MHz antenna then you should not expect the performance in any band to be really that good. Second, a glass mount antenna is very high loss by the nature of the feed system. You loose over 1/2 of what the antenna picks up in the through glass feed and many times end up with about what a antenna inside, mounted on the scanner with out feed loss would have. Also unless you get your antenna mounted above the car (on the roof) and in the center to have some kind of ground plane your performance is going to suffer.

If you want to use the system in your house, I would suggest a 7 to 12 element 900 MHz beam, mounted as high as you can get it (at least 20 feet above your roof line) and use good coax (9913 minimum or better) with quality 'N' type connectors, one solid run of coax (no splice) and as direct of a run (shortest) that you can. Make sure the antenna is pointed at the transmitting tower (not downtown or at the police station).

If you want to use the system in your car, a high gain, 900 MHz mobile antenna, body mount (not mag mount or glass mount) in the center of the roof of your car, Feed with good coax, as short of a run as you can get, no rolled up or excess coax.

The other thing you might do is look for a scanner with better sensitivity and selectivity specifications in the 900 MHz band if that is what your primary use will be. That with the antennas above should help unless you are behind obstructions or just out of range.

Hope this helps

They are mobile cell phones antennas that I picked up at Radio shack and I had to use the TNC to BNC also got it from Radio shack.

I guess I will continue to use the new RS 800 mhz antennas, its the best I've found so far.

Thank you very much everyone.

Two-way radios are designed to operate on the band
they run on, so they're tuned a bit more for it.
Scanners are tuned to several bands, which makes them
less sensitive, I think...

The difference you see is as Matt says these radio in the 800 Mhz band have helical resonanors incorporated in them which eliminate increase the selectivity of the radio and are chock ful of tuned circuits ahead of the IF portion and are also tight tuned for narrow band response. Ulike scanners that need broadband response in order to operate across such a wide spectrum. The area to concentrate on with scanners that you will see the best and most apparent benefit is antenna feed line and antenna itself.

At 900 Mhz in ordinary top grade RG8 sees at least 3db of loss and hta is quite a bit. Keep you coax length as short as possible and if you are intrested in 800-900 MHz reception only get a tuned anteena designed for that band and you will reagin 3db of the loss you would face from the coax.

I heard that even if you get a real police radio, you will not be able to use it because they will turn it off somehow. I am not sure if you can still listen, but you will not be able to talk for sure.

In a Motorola Type II Trunked System depending on how many channels comprise the system you can have up to 32,000 (rounded number) individual radios. Each radio has a device address in Hex notation from 0000 to FFFF. If a radio disappears out of the system they tell the system to shut it out of the system. Once this has happend the radio must be brought back to the programmer terminal and introduced back into the system. A radio can be commanded to leave the system from the dispatchers console in the event say a car or radio stolen and they don't want the suspect to be able to hear the conversations on the system that would most likely be about him.

Hope this helps.
Bob

EDACS is the same way, kind of... Each radio number, known as an LID, logs into the system... If the system is not programmed to allow the LID for a radio, its really worthless... Again, with EDACS, the system administrator can allow only certain numbers with the ability to lock out lost or stolen units... Only one LID can be on the system at a time... The system can track that as well...

Aren't there ways to program radios if you know the system key and have the RSS to allow the radio to monitor the system without affiliating to the system? I'm pretty sure its possible to program a radio to act like a scanner with no transmit functions and they will never know that the radio is monitoring the system. It may take some technical experience and knowledge of radio programming but it's not impossible.

I believe this is available to people who have a legitimate reason to have
such equipment, such as news organizations.
I have visited a television newsroom here in Norfolk. There were several 800
radios there (one for each city). I'm pretty sure these were supplied by
each city for a price.

Since we have one of the three AES stores here in Orlando, I stopped by a while back and Emmit Smith suggested using a 2 meter antenna for listening to aeronautical. The beauty of that particular one is that it also works great with the Railroad and the 800 systems here in Orlando. Those are the three areas I listen to the most.

For the lower end, 5mhz thru CB and into the 50mhz range, I scrounged up an old Cobra magnetic mount CB "Shorty" antenna w/ a center load. It too works great. I tell you guys it's all in that radio, a half decent antenna only inproves it that much more.

6889. Help !!!

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-12 00:33:52 UTC
From: Jaycee
Topic: 6889 Message: 6889

I have program all my trunk ids and such and when I scan it just stays on one channel.It will pick up all the ids I have entered.It will when it stops on this one channel it will say:VC 857.9875,next line bank 0 ch 20 ,then the text tag.Different tag tag for all my entries but stops on the same channel and list the same channel.Would appreciate any help I can get.If you need to email me please do at budman8@....I am in Columbus,ohio and trying to program a motorola trunk with my pro-95.Thank You !!

6890. Hiss from pro 95

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-12 01:39:05 UTC
From: pony502002
Topic: 6890 Message: 6890

Is it just mine or does everybodys pro 95 scanner hiss noticeably while sitting on the nightstand in a quiet room? My other scanners pro 23, SC150, SC200, and the older bc60xlt all run quiet.

6891. Re: [PRO-93_95] Hiss from pro 95

you could be getting some interference, is a cell phone nearby? or is a tv on? check for any interference you might have. i have a pro-93 and you can only hear it hiss if you hold it up to your ear, but mine in not loud at all, its not noticable.

Eduardo, This looks like a well made case for the Pro-95. I was wondering if I sent you a money order for $25.00US, if you would send me one of these.

I'm not really sure there is a problem. If you are picking up all the talk groups you have entered.
Is it ALWAYS the same FREQUENCY displayed? The bank and channel numbers would be the same no what freq is displayed until the system switches to another data channel. In your example below I would assume the data channel at that time is on bank 0 channel 20. When the system changes the data channel freq your scanner would show that change. The frequency readout should show the exact freq being recieved but the bank/channel shows where the data channel is located on your scanner. Sorry if that sounds redundant. Anyway, in a nutshell if it always the same frequency (857.9875) that's odd! The bank/channel deisaplay is normal.

Thank you Steve for you response.I guess things are ok.It shows a
different frequency.I am picking up all my talk group ids.I just the
the channel at the top would change.I guess it don't change unless
the data channel changes.I have notice that.Thank You for your
help.I thought I had done something run.I had read that manual about
a 100 times..Take Care..

Option 1: Save as a text file (File->Save As, select "Text Files" in the "Save as Type" list, then give it a name like ABC.TXT), then open it in your favorite text editor and print.

Option 2: Select ranges of frequencies, press CTRL-C. Open your favorite text editor, press CTRL-V, and print.

Save as a TXT file and then load into Notepad or Wordpad... You can select
and print each bank individually if you want to...

6904. Mobile Mount for Radios

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-14 16:07:31 UTC
From: Chris Pohlad-Thomas
Topic: 6904 Message: 6904

I am considering building a wooden box similar to the auto desks that you see with a platform on top that would allow me to put some handheld scanner mounts on it. On the bottom it would be sloped to match the contour of the seat and it would sit there and i could mount my radios on it. I was wondering if anyone else had any ideas on this or if they have tried it before and have some design plans I could see. Thanks a lot!
Chris

6905. MIL AIR and WIN - 95 - can you really hear the planes?

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-16 07:06:32 UTC
From: phdhinson
Topic: 6905 Message: 6905

By using the win 95 program, I am able to input freqs of interest but have not heard anything. Does anyone have any real world experience with this "expanded" frequency band. (Yes,I have switched to AM.)

I am interested mainly in listening at airshows. I have seen the sensitivity but honestly, to me those numbers don't mean much more than "good luck trying to hear something".

So, what if anything might I expect to hear in a frequency band that was filtered out in the radio design but was over-ridden by a piece of software?

Thanks,
Phil - St Louis, MO

I'll quote you on this one...
>"good luck trying to hear something".

Because there are RF filters in the radio that block these
frequencies, the sensitivity is VERY poor.

I've even found the '95's sensitivity poor in Civil Air band.

Check with your local Radio Shack, the Pro-92 is on closeout for
$99.97. The 92 will provide more functionality then the 93.

Phil, because the scanner filters were designed to cut off you are not going to hear much unless you are very close. I did a quick sensitivity test and found it very poor in the military air band. here is a link to another test that will give you a idea of the sensitivity in the band you are trying to receive:

http://www.starrsoft.com/freeware/Win93/test.txt

---------- Original Message -----------

By using the win 95 program, I am able to input freqs of interest but have not heard anything. Does anyone have any real world experience with this "expanded" frequency band. (Yes,I have switched to AM.)

I am interested mainly in listening at airshows. I have seen the sensitivity but honestly, to me those numbers don't mean much more than "good luck trying to hear something".

So, what if anything might I expect to hear in a frequency band that was filtered out in the radio design but was over-ridden by a piece of software?

Thanks,
Phil - St Louis, MO

All,

I ordered one on 5/13/03 and had it in my hands on 5/16/03! I've ordered things from down the street and it's taken longer than that, let alone from Mexico!

The case is great - high quality construction, and it fits like a glove. I highly recommend it!

I ordered two on the 14th. They arrived
the 16th. (One for my Pro-95 and one for
my sister-- I'd given her a Pro-95 for
her birthday.)

I wondered about ordering two of them,
sight-unseen, but now I'm glad I did.

The cases really are VERY nice!

I completely agree with Dave. This is a high quality and very well designed case specifically made for the Pro 93/95. It fits perfectly and is highly functional. The unique clear plastic windows allow you to view the display and use the keyboard while protecting the radio. Eduardo provided me with a FedEx tracking number and delivered it to my door in less than 24 hours!

Gary,
Santa Maria, Ca

Now, is this an update/modification of the 2002 "Orlando Area.p95" one
created by the fellow in Orlando a while back (who's name I forget)?? --
(It has the same unique characteristics in certain areas :-))

If so, Please advise what has been done to update it to be more current,
now that the BC talkgroups have shifted around! :-)

Don't want to overwrite the loaded one if not (Yes, I know how to save/mod
them :-))

But, perhaps we can get an even more accurate one created for all,
combining efforts?

Thanks!

6920. Anyone going to the Indy 500?

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-19 20:09:52 UTC
From: awhaukap
Topic: 6920 Message: 6920

A trunktacker is more than you need for the Indy 500, but the text tags do come in handy! A few years ago I had the big bulky BC780xlt in portable mode... the PRO-92/93/95 is a much nicer size package!

Anyway, I have uploaded a zip file that contains the P92, P93 & P95 files on my website, the base of which came from the indyscan website and I have added a few observations of my own. I will be updating it throughout the rest of the week, as changes warrant - the last update/change will probably come just after carb day (Thursday).

You can download it from here...
http://209.145.176.7/~090/awh/freqs.html

The auto racing frequencies are about 1/2 way down the page.

The file name is "indy2003.zip" (Indianapolis 500, 2003) from this point on I will be appending a letter to the end, so that you know when it has been updated.

Good Luck!

Hello all. This is Tony, one of the group moderators. The original p93/95 Orlando files were mine. I removed them because someone on another local Orlando scanning group got peeved at my posting of talk groups (on the other Yahoo group---he works for the radio shop and I work for Orange County FD). It seems things have simmered down so I am adding my files back to the Pro-93_95 group (an e mail was sent through FD chain of command---'nuff said!).

hey Tony..
Sorry I wasn't trying to step on your toes by making another p95 file for the Orlando area. Yours was great, I just added some more airport frequencies and all the police frequencies as well.

6928. Losing Trunk IDs in Win95

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-20 17:53:10 UTC
From: Chris Pohlad-Thomas
Topic: 6928 Message: 6928

Has anyone noticed that they can be working on a p95 file and save it, come back in and some of their trunk IDs are missing? Just curious if anyone else has run into this problem.

Chris

So are we causing possible damage to the radio by allowing it to run dead with the NiMH?

-----Original Message-----
From: Ted Hodges [mailto:ke4nbb@...]
Sent: Sunday, April 13, 2003 8:49 PM
To: PRO-93_95@yahoogroups.com
Subject: Re: [PRO-93_95] Pro-95 battery warning

Norm,

What you're likely experiencing is the "knee" in the discharge curve of NiMH, and NiCad, batteries. I first noted a similar occurrence in my ham radio HT's (handie talkies) NiCad battery packs and was told by a fellow ham that the discharge/ voltage drop of such batteries is gradual until it reaches the "knee" in the curve, then the voltage rapidly drops toward zero. Once you hear that beep in the Pro95 the voltage drops off so fast that you may hardly have time to notice! Alkalines have a more gradual curve over their lifetime so you would have more time to secure replacement batteries before the radio becomes inoperative.

The nicest thing about the NiMH batteries is that you can recharge them at any point along their discharge curve (that is, as often as you want) without the life-shortening memory effect of NiCads, not to mention the higher capacity in the same size package.

Hope this helps!
Ted KE4NBB

yes--there are some alpha tags missing in sub-bank 1 & 2 but it looks like the talk group numbers are there. I can't remember for sure but I think it may have something to do with the way you type or tab between fields. don is the man to ask for sure.

Not at all. I run mine all day, every day. The batteries run down
after about 20 hours and when the warning starts I change them.

It seems my question sparked some interesting responses!

There are at least 2 "Central-FL.p9x" files floating around -- One dated 1-19-03 and one dated 10-05-02.

The 1-19-03 one is almost identical to the 10-05-02 version, but is slightly changed.

Both give EXCELLENT coverage to anyone traveling anywhere from the Space Coast through Orlando to even the Tampa area.

However, my question was based on the Space Coast portion (Brevard County), whereas the talkgroups have been massaged over the last few months and we are looking for a RECENTLY-updated version, as uploaded by "stjames4870", that reflects the latest changes (Ones many of us here on the Space Coast are still trying to establish) - hence the question as to it's genealogy. :-)

The similarities in "TitusvilleFla.p95" and "OrlandoArea.p95" in banks 7 and 4, respectively precipitated the question.. :-)

s'OK? :-)

My Central FL files have been minimally modified but I do post the dates of modification in the file name to help avoid some confusion (or create some in this case). Most of the mods I made were to some local ham freqs and I believe I deleted my kids baby monitor freqs---didn't think that would interest anyone very much. As far as the Brevard County info, I don't monitor them much or receive them particularly well. While I can confirm my freqs are in proper LCN (it's an EDAC's system), I don't have many talk groups programmed because they have so many. I will usually monitor them in "open" mode when Orange County has some type of mutual aid response with Brevard. If anyone is interested, the East Central FL Scanner page provides EXCELLENT info on the Brevard area (amongst others).

Affirmative on his page - a local (and further away) gem of information!
:-)

However, putting together a ".P9x" file accurately covering the whole Space Coast, and KSC/CCAFS/MILAIR/PAFB/Commercial freqs, ad nauseam, is an ongoing project of mine, but being a miserable typist from PPS (www.postpolio.org), it is quite a labor.
(especially since they recently massaged the local TG's :-))

Ergo, I have been seeking a ".P9x" file with a lot of that info already input. - Therein lies the core of my "origin and current-accuracy" questions. :-)

Nobody over here seems to have one but the recent "titusville" one looks promising!

Does you case have belt loops on the back? Or, do you use the clip on the radio?
What is the final cost to ship it to North Carolina?

6944. New 95 Files

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-21 17:18:11 UTC
From: Aj
Topic: 6944 Message: 6944

Good afternoon All,

I downloaded several new files into the 95 folder. i hope that some of them you will be able to utilize and enjoy. I realize that I have duplicated several systems allready submitted by others living in central Florida. After i have had time to review those other files if I feel mine are not as informative, I will remove them. Until them Enjoy.

6948. Re: [PRO-93_95] Pro-95 battery warning

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-22 04:18:50 UTC
From: n6mly
Topic: 6744 Message: 6948

Running the NiMH batteries dead cannot damage the radio but it can damage the battery. What can happen is if one of the cells is deader then the rest it can be reverse charged by the current from the other cells. This will destroy the cell and so the entire battery. It is best to change batteries as soon as you get the first warning of discharge, if not before and avoid deep discharge.

Phil, n6mly

6950. Safety with any batteries

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-22 17:28:06 UTC
From: Aj
Topic: 6950 Message: 6950

I keep reading everyones valuable opinion on HiMH batteries. So I thought I'd add my thoughts too.

I use my scanners in my job by keeping track of County operations here in Central Florida. My scanners all have the same type of NiMh batteries, BUT of different ages. They tell you they last approx. 1000 hours. That's true but it's a rather conservative estimate since I've run one set of 6 in a Pro-60 for nearly a year constantly on and off the charger.

My secret to long life in any battery was taught to me in the Navy. I test all batteries for stress the first of every month. It drives my wife a little nuts but I get to do it while watching some sporting event on TV on Saturday and Sunday. I discharge all the batteries using one of the systems available at Radio Shack, read the level, then charge them for 24 hours and retest Sunday afternoon to see what their levels are. Any difference in any battery that is less then 75% is tossed. 75% was chosen for the simple reason that it would only provide approx. 4 to 6 hours of use from a 1500m Ah battery. When placed with a stronger newer battery you end up with the weakest link problem.

My oldest batteries are three years since purchase and maintain a pleasent 91% difference.

In all I use some 40 1500n Ah AA batteries in my government issued radios and personal scanners.

Proper care and attention to level of use will help you keep any type of rechargeable battery at peak performance.

Oh and a cloth damp with any cheap carbonated drink wiped on the ends of the battery and dry wiped before reinstalling will prevent the slow buildup of corrision.

6951. Re: [PRO-93_95] Pro-95 battery warning

Yahoo group: PRO-93_95 (2003)

From: Ted Hodges
Topic: 6744 Message: 6951

Mike,

As others have already mentioned, no damage to the radio but you don't want to leave the rechargeables in a discharged state any longer than necessary. I do most of my monitoring while mobile at work (in and out of the car all day so listening in spurts) and keep the "back up" non-rechargeable battery pack (black) loaded with alkalines. I then recharge the AA NiMH at home on a separate charger and they seem to be doing fine.

Also, I found a discarded cell phone 12 volt car cord, at the local Goodwill thrift store, that puts out adequate voltage for the Pro95 without modification (99 cents for the adapter and just had to change the plug at the other end to match the Pro95). I love Goodwill for things like that!

Happy monitoring!

To: PRO-93_95@yahoogroups.com
Subject: Re: [PRO-93_95] Pro-95 battery warning

Norm,

What you're likely experiencing is the "knee" in the discharge curve of NiMH, and NiCad, batteries. I first noted a similar occurrence in my ham radio HT's (handie talkies) NiCad battery packs and was told by a fellow ham that the discharge/ voltage drop of such batteries is gradual until it reaches the "knee" in the curve, then the voltage rapidly drops toward zero. Once you hear that beep in the Pro95 the voltage drops off so fast that you may hardly have time to notice! Alkalines have a more gradual curve over their lifetime so you would have more time to secure replacement batteries before the radio becomes inoperative.

The nicest thing about the NiMH batteries is that you can recharge them at any point along their discharge curve (that is, as often as you want) without the life-shortening memory effect of NiCads, not to mention the higher capacity in the same size package.

Hope this helps!
Ted KE4NBB

Aj,

I only wish I had the time to take care of my batteries as well as you do! Much better than having to replace them prematurely as the costs would add up over the years.

But, I do have second thoughts about your use of "any cheap carbonated drink..." As a nurse I recall a very old remedy for a childs earache: 15 drops of whiskey placed in the painful ear, and an ounce swallowed by the parent of the screaming child. Cheap whiskey, like cheap carbonated drinks, would do fine for the intended use but I'll be darned if I'm going to buy "cheap" if I'm going to be drinking the leftovers! :-)

Here's another vote of confidence for Eduardo's Pro93/95 cases and a recommendation to buy one before they're all gone. My PayPal cleared on Wednesday and the FedEx guy just delivered by two cases about 20 minutes ago. The case is very professionally made with physical and visual access to all buttons, ports, knobs, and the viewing screen. No padding but made of seemingly good quality thick black leather to protect your radio. Good product and worth the price.

Thanks, Eduardo (and your wife),

Greg

Greetings All,

Just wanted to contribute to the group effort.
I just found that my Amplified Computer Speakers work great when plugged into my Pro-95's external speaker jack. If you want to try this, and don't have a spare set of Computer Speakers....You can probably find a set cheap at your local Thrift shop, or the Salvation Army thrift shop, or Good Will. Hope this helps. -Enjoy.

I just bought a set for $9.97 for my portable DVD player but they also work great on my scanners. they use 4C batteries. I drove from Baltimore to Orlando and a buddy of mine just borrowed it and drove from Orlando to Nashville--batteries still fine

Catalog #: 40-1407

judging by the price, I think they are on clearance (anything that ends in $.97)

Don,
Just realized my search banks dont work on my Pro 93. Initialized
and they work, but when I download Win 93 back into the scanner the
search banks dont work, whats happening. Have older version of Win93
on another comp. and my other 93 works fine, I have two.

What, exactly, does "search banks dont work" mean? What is the observed
behavior?

6970. Encrypted talkgroups

Yahoo group: PRO-93_95 (2003)
Date: 2003-05-28 23:39:02 UTC
From: eding10
Topic: 6970 Message: 6970

My Pro-93 ignores all encrypted talkgroups on Motorola trunked radio systems. It just acts like they don't exist while trunker and my Pro-94 confirm them. It does track digital unencrypted talkgroups but not digital+encryption. I haven't seen anyone else mention this. Do only certain versions of the 93 do this?

6971. Now what?

I have been using a uhf rubber ducky for an antenna on my 95, all fine and happy, I got the new RS 800mhz antenna, and all is fine also. While listening to Orange County fire(ca) from La Habra where I work, I was getting the normal static/bad reception as always, but while switching the two antenna's back and forth, I find out I got better reception without either of them. But I cant here LACOFD or much else without the antenna's, do I antenuate the 800 stuff and leave the uhf and vhf alone. Whats are the thought and anybody else have this thing going on?

And it should ignore them... None of the current Radio Shack
scanners are capable of digital and none of them do any encription
either... The R/S digital scanner is due out in November of this
year...

You are probably near a cell phone antenna site and it is overloading
the scanner's front end. Yes, try the attenuator on 800.

I agree with Dick. Sounds like you are getting desense on the 800 mhz frequencies. I'd try attenuating the trunking frequencies and use one of the ducks so you can still receive VHF and UHF adequately.

I've got the new RS 800 mhz antenna, and it appears to be a good 3 db better than the stock duck. But, the RS antenna is made for 800 frequencies, so it is also a good -3db relative to the stock duck on 150 and 450 frequencies. After you attenuate the 800 freqs you may want to experiment between the RS antenna and the stock antenna to see which works best for you.

Good luck
Bob

They _used_ to have one for the '92 (and it works with the 93/95),
but it hasn't been available from RS for some time. It can still
be obtained, in limited quantites, from GRE.

Visit your local R/S... If they are like my store, we keep old catalogs all the way back to 1971... I am sure your part number is 20-043 and retailed for 59.99 or so... Have them call Radio Shack Unlimited (RSU) and see if that part is avaliable... If they are not willing to help you, call my store at 260-665-7101 and ask for me personally... I will do my best to help you out... I know I do not have any of those antennas laying around... You might even call the R/S outlet store in Groveport Ohio... They may have an antenna missing the package or a water damaged package in the back... Long shot, but may be worth the call if not parts are avaliable...

6984. Re: Discone w/out whip ??

I actually just started working for Radio Shack. I bought the antenna off of ebay before I worked for RS and didn't not what the cat number was. It was sealed, so I don't think its missing the whip, it just was not included with it. Are you saying that the whip is 20-043...or that is what my discone is?
Thanks.

The discones are increadably wideband antennas, but have zero gain dbd. From the low frequency they are cut for (I have no idea what the RS ones are cut for, but you could figure it out by measureing it) it will receive well 10X as high. So if it is cut for 150mhz low end, it will recieve up to 1.5ghz. The problem is, the lower frequency you get, the bigger the discone has to get, and it gets large quickly. The whip on the top of the disc is supposed to act just like a vertical whip with a ground plane, and its supposed to help you receive frequencies lower than the discone's cutoff frequency. I have heard mixed results of how well they work, and because the whip is an addon to the antenna, you lose some of the features of a pure discone receive antenna when you add the whip. Unless you are really trying to pull in some lowband (30-50mhz) stuff, I would say skip the whip, or get JUST a whip antenna, don't mix the two.

I made myself a 440mhz lower cutoff discone the other day (to save space, a 150mhz cutoff freq was too large for my room), and I still receive 150mhz repeaters on it because they are fairly powerfull. The donut receive pattern also helps cut out noise from my computer (I mounted it right over my monitor) and it cleans up the audio that way.

From: Terry Kenny
Topic: 6987 Message: 6987

The original discone did not have a center low band whip. The newer discones do. You can always add a 48" whip solder to a nut and then tread the nut on the top.

you need the radio shack ac adapter cat no 273-1767a, it is a 9 volt dc
300mA adapter and you need the "B" plug on the end for your 93

Mike

Just to further clarify this...300mA is the MINIMUM you need. If you already have a 9VDC adapter with a higher current rating, there's no need to get another one. I use a 1000mA adapter at home. Right now Radio SHack has their 1000mA, multivoltage, universal adapter with 7 plugs on sale for $20, normally $40. This is a really nice unit as it stores the plugs in the wall wart, and it also has a pass through outlet so you can still plug anything else into the wall on that plug if you're short of outlets.

Item Number: 273-1681
☐ Overload and short☐circuit protection
☐ Output voltages: 3, 4.5, 6, 7.5, 9 or 12VDC
☐ Up to 1000mA
☐ Seven Adaptaplugs
☐ LED "on" indicator
☐ 6☐ft. DC cord with Adaptaplug socket.

I don't mean to be a shill for RS, but this is a really nice adapter to have around the house. I'm tempted to buy one for work.

The only problem I've had with the universal multi-voltage adaptors in the past is that the output tends to be noisier than single-voltage adaptors. My older DX-398 shortwave radio absolutely hates multi-voltage adaptors. Reception degraded noticeably when I used a multi-voltage adapter. Not sure if scanners are similarly sensitive, but hopefully this R/S adapter is better filtered than their older counterparts.

Your charging rate really shouldn't exceed what the rating of the batteries are. Example if your batteries are rated at 750 mah you shouldn't charge them with a charger that is a rate of 1000 mah however a 1000 mah is not far out of line to really cause much problem for you.

But if your charger is say 3500 mah what happens is the batteries charge at a very rapid rate and get very hot and that shortens the life of the batteries rapidly.

But inversley if you run a 300 mah charge into 1000 mah batteries you get a very slow "trickle" charge on the batteries maing them last a lot longer than the "rapid" charge way.

So what I use, should anyone care, is a 300 mah charger into 1600 mah batteries and it takes over night to charge but I do seem to get quite a long life out of my batteries.

---> My reply to what merkamen wrote 6/2/2003 7:30:55 PM

First make sure you entered them in LCN (Logical Channel Number). You have to skip the first channel space in the pro-93/95 and start with 01. That would be LCN 1, then 02 would be LCN 2 and so on. The important thin is that you skip memory position 00 and start at 01 then you list them in the proper order of LCN.

Next, double check that you have entered all the frequencies of the system, that they are in the right order and the right frequency (that you did not enter a wrong frequency or invert a number someplace) I know that is simple but if the frequency you are missing or messed up is the control channel you will not hear anything and it is easy to do. Just double check it.

Next make sure that you selected EDACS in two (2) places, first on the bank as a whole, you have to tell the bank it is looking for EDACS and then second on each of the channels that you have frequencies in for that EDACS system. So again, two places (the bank and each EDACS channel or memory position).

Next make sure you do not have the scan setting in that bank set for closed (unless you have filled in the talk group information you want to listen to). Set it for open scan and it will pick up all the talk groups.

Next, simple but I have over looked this, check to make sure you are scanning the bank. If you have the bank locked out you will not scan or trunk track that whole bank.

Hope this helps, let us know if you get it going.

Mike

From: Zach Samson
Topic: 7002 Message: 7002

hello,

awhile back I remember seeing a post about making the antenna on the pro-93 fold down so it is out of the way. I know you need a bnc connectors. I need to know how many (I assume 2, but just want to make sure) and what kind of connector. also don't know if this link works, but if it does is the connector I need on here? http://www.radioshack.com/category.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F005%5F003%5F001%5F002&Page=1

By adding two (2) BNC 90 deg. connectors you can rotate the antenna in any direction so when it is laying flat on a surface you can rotate the antenna up, when you carry it on your belt you can put the antenna down so it is not hitting you in the arm. This really works for any angle you place the scanner.

You can see pictures on the bottom of this page:
http://miked2000.home.mindspring.com/pro93mod.htm

7007. Eduardo's Pro 93/95 case

Yahoo group: PRO-93_95 (2003)
Date: 2003-06-03 15:55:14 UTC
From: ajftgov
Topic: 7007 Message: 7007

Received one this morning, an excellent product with a good price and quick delivery. Should increase the life of my radio as I am forever knocking it off any flat surface I put it on. Also invested in the RS 800 MHz antenna, a good performer. Heard some freq's that were dead on my Diamond RH77.

Now, Eduardo how about a case for my Kenwood TH-F6?

Hi Ted,
I apologize for taking so long to tell you how much I enjoy your response. Thank You. By the way, are you a Coke or a Pepsi Man? [lol]. Actually taking care of batteries takes very little time I just drag it out so I have an excuse to sit and watch weekend sporting events. My wife says she checks them while preparing dinner when I'm on the road. Yep I got her hooked when we married 5 years ago. Being summer in central Florida we have to pay special attention to the thunderstorms that build during the day in case we have to tie down items around the property.

Thanks Again.
Laurence

7010. Pro 95 VS. 92

Yahoo group: PRO-93_95 (2003)
Date: 2003-06-03 21:56:32 UTC
From: merkamen
Topic: 7010 Message: 7010

Hi I would like to know what you guys think about the pro 92 in comparison to the 95, I know a couple more batteries, but the signal decoding seems to be neat feature as well as the LTR function. I don't think I'm going to keep my 95 just bought it on sale at the shack and I think I would rather have a 92 instead, any comments?
Thanks
Bryan

Will it work with pro 92 as well, what did it run you? Anyone made a neoprene case?

Just got the new RS 800mhz antenna (www.radioshack.com
Catalog #: 20-283). I've only had it a few hours and have
done no scientific testing, but a noticeable improvement.

95 has the hotter receiver. Better 800 antenna on 92 helps. check:

For non-trunking functions the Pro-92/2067 are very nice radios.
I bought a 2067 with the latest software updates and it has problems
following the local motorola trunked system. The 2067/92 did
decode LTR systems and the PL/DPL function is very nice. I use the 95
for trunking capability and use the 2067 for monitoring local
conventional and LTR systems.

Best Regards, Keith

It all depends on what your needs are. If you need a slow scanner with only 500 channels and PL/DPL decode with LTR, poor search features and poor 800MHz reception, then the PRO-92 is for you.

If you need 1000 channels, no PL/DPL, no LTR, and great 800MHz reception, and nice search features, then the PRO-95 is the right choice.

I forgot to mention that the PRO-92 has a max scan rate of 25 channels
per second.
The PRO-95 has a max scan rate of 60 channels per second. Big
difference when you
have a lot to monitor...

HEY YOU! Don't be so crude.
The PRo-95 is world's better than the PRO-94.
And, in my opinion, better than the Unidens - I have both.
Dick

As an owner of both, I carry one of one reason and the other for another. The 92 is best when you need to scan several ranges at once. If you want sensitivity sick with the 95.
Ex: I have both scanners loaded with the same collection of frequencies. the 92 cannot hear half the railroad channels that the 95 gets. Distance is 15 miles from tne nearest repeater. Closer in both will hear but the 95 is quicker to respond.
There is no contest with Aeronautical, the 95 is hands down the most sensitive, by receiving airline request calls from over 400 miles away. As for trunking? again it's reception and sensitivity to the repeater. Neither one allows you to lock onto an ID like the pro-90 but what the heck. 4 Batteries vs 6 batteries?, same charging time.
Don Starr had gone a long way in helping to unlock the 95's capability, you cannot span as much reception area in the 92 as you can with the 95. I have been listening to alot of shortwave lately with the 95, something you can't do with the 92.
And last with the 95 Don Starr has unlocked the Military band, which is where I get lots of readings as military aircraft travel down the state of Florida to and from Avon park bombing range.
Do yourself a favor and increase you hobby by purchasing the 92 version 3.28 and keeping the 95. Then you'd be close to alot of other guys who like me line our scanners up on the shelf and turn them all on at once thus driving the family out to the malls as you relax listening to the roar of the airways.

Have a great week
Laurence

From: Patrick
Topic: 7020 Message: 7020

While I applaud those of you who take the time to optimize you battery performance, and life, I've never found the time to do that. Luckily there's an great option for those of use who cant squeeze every last mAh out of their double A's.

At http://www.mcmelectronics.com they sell a Duracell manufactured, AA, NiMH, 1800mAh, rechargeable battery for only 89¢. Only 84¢ when you buy 10 or more. These are great, well made, batteries which I use on a regular basis. I always keep my MAHA charger full with a set, and just rotate wiht all my devices that use them.

Go to that website and do a search on "DURACELL HR6" and you'll find them. They used to have AAA's, but I can't find those anymore.

To give you an idea of shipping, I bought 44 AA's and the shipping was about $8. So my cost came to $1.06 per battery. Use them twice and they've paid for themselves, compared to the price of alkalines.

7021. Re: Pro-95 Question

Yahoo group: PRO-93_95 (2003)

Topic: 5709 Message: 7021

The charging rate is what the charger is capable of providing, not necessarily what it will provide. A charger can be designed either to limit current, but without raising voltage, it can't forcefeed a battery with more current than it will otherwise accept.

The original question, I believe, was on operating the scanner, not necessarily charging batteries, although if rechargables are in there, it will get charged. In operating the scanner, again, the AC or DC adapter cannot force more current into the radio.

Using a 1000mA rated adapter will NOT harm either your scanner or your batteries. It just means it has a higher capacity that you need for that particular application.

If a person is paranoid about battery life, see my last post about 89¢ AA's. At that price they're practically disposable.

Aj,

I have had a Pro95 for about a year now, and I also think it is one of the best out there. I also have Don Starr's Pro95 software, BUT I was unaware that it could program in the short-wave freq.. Maybe I am a little slow, and just missed that function, please inform me how this works.

Thanks in advance!!

If a charger is rated at 1000mah and your battery is a 1000mah rated battery your battery will recieve a complete total charge at the designed rate of the battery and your battery will be somewhat warm to the touch. If you use the same 1000mah into a 100mah rated battery your battery will be fully charged in 1/10 of the rated charge time resulting in a boiling hot battery. What's wrong with this picture. Heat kills batteries.

Let's step back a bit. the original question asked what was the right wall wart to power the scanner. You do not need to limit yourself to a 300mA AC adapter to power it. You can get a higher rated adapter without damaging your scanner or batteries. The rating is the limit to what it can provide, not what it will force into yoru scanner.

The adapter does NOT have the charging circuit, the scanner does. The adapter rectifies 120VAC to 9VDC. The Scanner takes that 9VDC and charges the batteries. So as long as you meet the minimum capacity required from your adapter, 300mA, you're fine. The charging rate is controlled by the scanner, NOT the ADAPTER. Why by a 300mA adapter and be limited as to what you can use it for?

I guess in designing the charging circuit for the radio one would want to be sure of what rating the voltage regulator should be. So if you will notice the radio limits itself to 9v and the specification is somewhere to the tune of 300ma. So batteries asking for 1600 ma from a 300 ma through a regulator rated at 300 ma is going run cool as a cucumber and have and everlasting life. How many of you out there have ran your radio with a 12v wart into 1600mah batteries. Gets toasty don't it. That 9v regulator will last forever won't it?

I have already seen 2 PRO-93 and 95 blow a regulator under the exact conditions.

But it really deosn't matter to me as I operate my radio within the design specification.

What I had done with my PRO 95, is buy the 9v car adapter and also buy the 12v 1000ma wall adapter. The car adapter plugs directly into the wall adapter, when at home. What a neat setup.
The scanner will only draw what it needs to charge the batteries. I have been doing this for months and I get all day listening out of 1800ma NiMH batteries.

If you have a PRO-94, you HAVE a Uniden (BearCat). I have a BC245XLT, and though it is a better radio than the 94, my PRO-93 is my choice whenever I need to carry only one scanner. The freeware program with which you can completely program it, and change 300-channel setups in one minute, plus many superior features, greater sensitivity (especially of 800 mHz), and ALPHABETIC READOUT make it vastly superior to the Unidens.

The 95 is ONLY a 93 with 1000 channels rather than 300. Since I can change setups in one minute, and could not find 300 frequencies for one area at a time, I have no need for 1000 channels (which slow the scanning down if used. If not all used at one time, why not a 93?) I think the 93 is on clearance at $80 IF your local RS has one, or is willing to get you one.

For non-trunking functions the Pro-92/2067 are very nice radios.
I bought a 2067 with the latest software updates and it has problems
following the local motorola trunked system. The 2067/92 did
decode LTR systems and the PL/DPL function is very nice. I use the 95
for trunking capability and use the 2067 for monitoring local
conventional and LTR systems.

Hello to all...I am new here and have a few questions about the Pro-93 version 1.03 that I just got from RS for $80.
Are there any modifications (sensitivity, audio, etc)that will make the 93 a better scanner (like the mods for the 92)??. I did a search but the two links I found here do not work.

Are there any bugs within version 1.03...??
I am using Win93 to program it and will like to know if somebody has beem able to program successfully SW/HF frequencies..??

The AC adaptor plug...is it a C or a B...???

I am trying to read the 7000+ postings in this group but that is gonna take a while.

Thanks in advance...

D.

I'm afraid you are mixing up your milliamps. Chargers are rated at how many milliamps they are capable of supplying.
Batteries are rated at mAH. That is Milliamp HOURS; relating to time. If your scanner draws 100 mA, 1600mAH batteries will operate your scanner for 16 hours. If the scanner draws 200mA, the batteries will last 8 hours. I get about 20 hours operating time using 1800mAH batteries, thus my PRO-95 draws about 90mA.
The mAH rating of a battery has absolutely nothing to do with charging current. The higher the charging voltage, the more charging current will be drawn by the battery. Higher voltage means faster charging and warmer batteries.

Actually, that's not quite right.

>From one of my previous posts on this topic, the capacity of the
cell in mAH is directly related to charge current:

Here are some recommended optimum parameters for charging NiMH cells
(sources: Panasonic, Texas Instruments, EDN magazine, EE Times).
You can charge cells outside these parameters, but cell life - useful
time after charge as well as the number of charges the cell will take -
will be degraded (note that our scanners do NONE of these!):
1. Fast charge current between .5C and 1.0C (where "C" reflects
the cell capacity - an 1800mAh cell has a "C" of 1.8, so it
should be fast-charged with a constant current between 0.9A
and 1.8A). To charge a range of cells, like 1000mAh to 2000mAh,
a fast charge current of 1000mA is required. This is at the
high end of the 1000mAh cells' range, and at the low end of
the 2000mAh cells' range. You wouldn't want to charge 800mAh
cells in such a charger, as 1000mA is 1.25C - too high.
2. Trickle charge current between .03C and .05C, with a safety
timer (i.e. don't charge indefinitely).
3. Fully-discharged cells should not be fast-charged. A trickle-
charge current should first be applied to raise the cell voltage
to about .8V
4. When the dV/dt (negative delta V) occurs near end-of-charge,
the charge current should switch to the trickle-charge value
and charging should continue for a limited time (NOT indefinitely).
This is a "top off" for NiMH cells. (There is also information
indicating that the charger should switch to a constant voltage,
instead of the trickle charge current, and should terminate
when the current approaches zero - this seems to be more
applicable to Li+ batteries, though).
5. Temperature must be monitored throughout the charge cycle. Rapid
charging should not be used if cell temperature is below 0 C or
above about 50 C (max temp depends on cell size).
6. Cell temperature will increase during the charge cycle. dT/dt
should be monitored and, if it's excessive (the temperature is
increasing to rapidly), the charge current should be decreased.

FUNC + ATT controls global attenuation (and causes the ATT display
in the lower right corner).

ATT by itself controls attenuation on the current channel (and causes
the A display on the top line).

You didn't indicate which scanner you have, but this is on page 47 of
the PRO-93 manual, and pages 50-51 of the PRO-95 manual.

Actually you are 100% correct. But bear in mind that I was presenting
a simple explanation for non-technical people. I'm sure most of them
have not bothered to read your dissertation beyond the first few
lines.

It should be obvious that mah on the p/s was a typo as you so astutely observed the error. Your last line is what the whole tirade was centered on. The faster you charge a battery the hotter it gets. Heat will destroy a battery. Ever notice that when you charge NiCads with a "Rapid Charger" how hot they get and how they don't last as long as the same type of battery used for the same service but "trickle charged"

The point is and has always been that it's the heat not the current. But we have all been so busy finding fault in every "expert" opinion that has been offered here.

This is so like so many other message boards that the purpose of the exchange is to offer useful information and that always happens in the beginning but it always seems to always end up being a competition of who the smartest one is, the most accurate one could be and how we can find error in anyones intelligent offering.

So I will no longer offer anything of value and just glean what useful information that may breeze by on occasion and ignoring the challenges that will so often occur.

7049. Re: Pro 95 VS. 92

Yahoo group: PRO-93_95 (2003)
Date: 2003-06-06 11:54:29 UTC
From: Aj
Topic: 7010 Message: 7049

Good Morning Mike,

I copied a part of Don Starr's page to show you the extended range he created in the 95

http://www.starrsoft.com/freeware/Win95/default.asp

Extended Frequency Ranges!
As of version 00.06, Win95 allows you to enter any frequency between 5 kHz and 1.3 GHz, excluding the cellular ranges. This fills the "gaps" in the PRO-95's coverage (e.g. between 54 MHz and 108 MHz). For ranges below 460 MHz, the step size is 5 kHz; for ranges above 460 MHz, the step size is 6.25 kHz.
This feature can only be used in programmed channels - it does not work in the user-defined Limit Search (SR5). The scanner makes additional checks for "valid" frequencies. It has to, so that it can jump between its valid ranges as it's scanning.
Also, reception in some ranges may be affected by filtering and other characteristics of the scanner. For example, while the scanner will tune and receive commercial FM broadcasts, reception will be distorted. FM broadcasts are wideband, while the scanner is a narrowband receiver.
NOTE: This does not enable any cellular frequencies. The scanner appears to block any such frequencies.

To get the signals below 25MHz I use a portable Shortwave rollup antenna from Radio Shack. I know I am receiving if I can hear Fort Collins Atomic Time on 5, 10, 15 or 20Mhz. There is a lot to research between 5kHz and 25mHz and I'm just getting started. Not all communication is in USB either.

I found a quick way to make some amplified extension speakers for my Pro-93. I had a couple sets of cheap USP amplified computer speakers laying around I was not using so went through my junk box and built a 5 volt regulator so I could use these in the car or from a 12 volt power supply.

They work so far and sound good. Thought you might be interested.

Thanks, there is no magic or rocket science connected with the project but sure a quick and low cost (at least when you pick the speakers up cheap on e-bay or swap fest and have the regulator parts around) way to get some amplified speakers.

The idea would work with any USB type speakers as they all take 5 volts. I am fire testing a set right now on my desk top scanner and they do sound a lot better even on the desktop. I want to make sure I can get away without using a heat sink on the regulator but so far, looks so good.

Mike

7056. Fleet Maps

Yahoo group: PRO-93_95 (2003)
Date: 2003-06-10 17:56:34 UTC
From: Patrick
Topic: 1411 Message: 7056

I'm trying to program a trunked system in to the Pro-95 with Win95,
but I'm getting confused by the programming of the Fleet Map and the
ID's. Here's the data I have:

****

TRUNKED SYSTEMS (ANALOG)

FREQ. USER COMMENTS

856.0125 MOTOROLA TYPE I TRUNKED SMR
856.0375 MOTOROLA TYPE I TRUNKED SMR
857.0125 MOTOROLA TYPE I TRUNKED SMR control- every 3rd day
858.0125 MOTOROLA TYPE I TRUNKED SMR control- every 3rd day
859.0125 MOTOROLA TYPE I TRUNKED SMR control- every 3rd day
860.0125 MOTOROLA TYPE I TRUNKED SMR
This system is owned and operated by Western Communications, Inc.
Trunktracker Information:
Fleet map: B0 S1, B1 S1, B2 S2, B3 S2, B4 S3, B5 S3, B6 S0, B7 S0
User: Fleet Code:
Beckon Call taxi & delivery service.....102-1
Cable TV Subscriber Services.....090-1
Courtesy Lincoln Mercury.....077-1, 077-2
Discovery Investigations.....064-1, 064-3
****

I've got the frequencies programmed in (Just the 3 control freqs,
right?), but when I go to the fleet map portion of the program, I'm
not sure what to do with the B0 through B7. Are these Blocks
corresponding to the 0 through 7 under the Fleet Map part of program?
If so, I don't see an S0 option, but in the archives I find that this
is a Type II, correct?

So I'm guessing I manually enter the S1 S1 S2 S2 S3 S3 Type II Type
II. How am I doing so far?

Now I get confused again for the talkgroups & ID's. I don't see a
format that fits for the users above, such as 102-1 for Beckon Call
taxi. If I try to enter the ID's per the Fleet Codes above, I get an
error message about it being invalid.

Part of my difficulty is that I'm trying to program my scanner for a
trip on Friday, and I'm not near the system to check it out. WHen I
am near the system, I won't have my PC to program it.

I'm assuming I don't do anything with the Motorola 800MHz box, or the
Motorola UHF-Lo Settings

Thanks,
Pat

Win95 displays (and expects you to enter) Type I talk group IDs as
follows:
* IDs are either BFFF-S or BFF-SS, where B is the block number (0-7),
FFF/FF is the Fleet, and S/SS is the Subfleet.
* Because of the possible values for Fleet and Subfleet, IDs in a block
using Size Code 1 are entered as BFFF-S, all others are entered as
BFF-SS

Using your ID of 102-1 as an example:
* This is Block 1, Fleet 2, Subfleet 1
* Looking at your fleet map, we see that Block 1 uses size code 1
* Your ID must be entered in the BFFF-S format
* You enter 1002-1 (you could also enter 102-01, but Win95 will
change it to 1002-1)

(Technically, all Win95 requires is that you use one of the two formats.
Win95 will always interpret the first digit as the block number. Win95
will then reformat the ID based on the size code in that block.)

7058. Blank LCD Display

Yahoo group: PRO-93_95 (2003)
Date: 2003-06-10 18:22:20 UTC
From: Joe Hathaway
Topic: 7058 Message: 7058

Since the PRO93 and 95 suffer from SIDS ("Sudden Info Deletion Syndrome"), I think the following will be of interest, especially to Don Starr:

For the second time since I have been using my PRO93, the screen went blank, this time after spending some time in a warm, closed car. There were no chargers or new batteries involved. Many panicked group members have reacted with alarm to this failure, even sending the machine back for repairs. Then, a fix was developed involving merely resetting the contrast per the manual.

The previous time I encountered this, I dumped the scanner to Win93, and all seemed well in the data interface, except for the Display Contrast setting on the first page. The range is -3 to +3. After this second failure, I noted for Don Starr the actual number in that field in the downloaded data:
248

Resetting the field to zero and uploading to the scanner fixed the problem--again.

I'm getting Size Code 0 also showing up as BFFF-S. I assume this is
to be expected, since it happened.

Don, thanks for you very rapid reply! It all makes sense now.

When would one need to use the Motorola 800MHz Offset mode?

If you're referring to the IDs from your list:
Cable TV Subscriber Services.....090-1
Courtesy Lincoln Mercury.....077-1, 077-2
Discovery Investigations.....064-1, 064-3

those are not Size Code 0. They're BLOCK 0. Your fleet map has Block 0
set to Size Code 1.

>ahhhh....NOW I'm starting to understand. We're dealing with several
>parameters. Blocks, Fleets, Subfleets, and size codes.

Yes.

You enter a value like: BFF-SS or BFFF-S
(Block)(Fleet)-(Subfleet)

Block determines Size Code, based on how the Fleet Map is programmed.

Size code determines how the bits in the binary talk group ID are
interpreted.

Here are the bit mappings for all size codes (S1 - S14):
S01 BBB FFFFFFF SS IIII
S02 BBB FFFF SSS IIIIII
S03 BBB FFF SSS IIIIIII
S04 BBB SSSS IIIIIIIII
S05 BBB FFFFFF SS IIIII
S06 BBB FFFFF SSS IIIII
S07 BBB FFFFF SS IIIIII
S08 BBB FFFF SS IIIIIII
S09 BBB FFF SS IIIIIIII
S10 BBB FF SSS IIIIIIII
S11 BBB F SSSS IIIIIIII
S12 BB SSSS IIIIIIIIII
S13 B SSSS IIIIIIIIIII
S14 SSSS IIIIIIIIIIII

(the IIII fields are User ID - not used by the PRO-93/95).

Hence the term "Size code" - it defines the "Sizes" of each of the
bit fields within the 16-bit talk group ID.

In Pat's example, you'll notice that if you program the fleet map,
then enter a few IDs, then start messing with the fleet map (blocks
0 and 1), your IDs will start changing. This is because the bits used
for Fleet and Subfleet change.

This is why you must set the Fleet Map _before_ entering talk group
IDs.

-Don

Subject: [PRO-93_95] Re: Pro 95 VS. 92

Good Morning Mike,

I copied a part of Don Starr's page to show you the extended range he created in the 95

http://www.starrsoft.com/freeware/Win95/default.asp

Extended Frequency Ranges!
As of version 00.06, Win95 allows you to enter any frequency between 5 kHz and 1.3 GHz, excluding the cellular ranges. This fills the "gaps" in the PRO-95's coverage (e.g. between 54 MHz and 108 MHz). For ranges below 460 MHz, the step size is 5 kHz; for ranges above 460 MHz, the step size is 6.25 kHz.
This feature can only be used in programmed channels - it does not work in the user-defined Limit Search (SR5). The scanner makes additional checks for "valid" frequencies. It has to, so that it can jump between its valid ranges as it's scanning.
Also, reception in some ranges may be affected by filtering and other characteristics of the scanner. For example, while the scanner will tune and receive commercial FM broadcasts, reception will be distorted. FM broadcasts are wideband, while the scanner is a narrowband receiver.
NOTE: This does not enable any cellular frequencies. The scanner appears to block any such frequencies.

To get the signals below 25MHz I use a portable Shortwave rollup antenna from Radio Shack. I know I am receiving if I can hear Fort Collins Atomic Time on 5, 10, 15 or 20Mhz. There is a lot to research between 5kHz and 25mHz and I'm just getting started. Not all

communication is in USB either.

Hello to all... I have a question about the Priority function. On my 93 (version 1.03) it seems like whenever priority is on, the trunk id delay on a motorola type system does not work. For example, I have a 2 second delay on the ID's. If priority is on, it will not wait the 2 seconds and just go to the next active ID. If priority is off, it will wait the 2 seconds and then go to the next active Id.....Is this normal or is it a bug...? If it is a bug, is there a fix for it..?

Thanks in advance for your replies.

7067. RE: [PRO-93_95] (unknown)

From: Don Starr
Topic: 7066 Message: 7067

>From the PRO-93 manual, page 45:

"When priority is turned on, the scanner checks that channel every
2 seconds"

The check of the priority channel will override any delays - both
on Trunk IDs and conventional channels.

From: mohappycampers
Topic: 7068 Message: 7068

Is there anyway (I know there probably is) to program 163.5125 into my Pro95? When I try to enter that it comes up 163.515?! I've tried entering directly into the scanner and using Win95.

Thanks.....Lisa

The range from 161.5700 to 173.2000 MHz must be in 5kHz steps.
The radio will not accept 163.5125 MHz. Both the scanner and
Win95 will round this to the nearest frequency that is valid
on the PRO-95 - 163.5150 MHz.

Last I heard, it was being treated like a laptop... You must have a
charged battery with the unit to show that it is indeed a working
scanner... However, knowing what all has happened in the past years,
I would really use my head and stick it with regular baggage... You
will draw quite a bit of attention with any electronic devices in
carry on...

Haven't flown in a while, eh Dave? Laptops are now removed from whatever bag they're in, sent through the X-ray machine apart from your other baggage, then taken to a station where they swab it and check for explosive residue, etc. They don't make you turn them on. (Disclaimer: based on May 2003 experiences in San Jose, Las Vegas, Phoenix, Los Angeles, and Ft. Lauderdale).

A scanner "should" be treated as an AM/FM radio. However, if you have batteries in it and just send it through in a carry-on bag, you should be OK. They may want you to take it out and turn it on.

Best bet would be to ask the airline on which you're flying. Or maybe visit the airport on your end and ask the security personnel at the checkpoint.

Nope... This wonderful place I work as a sideline makes a person drive everywhere in a marked car... My office is the front seat of a Ford for 8 hours a day as well... My next planned flight is directly into Oshkosh for the airshow... Little different story in a single engine... I can take the toys with me... ...and I will carry my "seal" of approval so its okie dokie... Though one should use their head while traveling either way to be safe...

Everyone should go to Bristol at least once....it's the best. We
lucked into season tickets about 5 years ago when they added some
grandstands. We usually sell the spring tickets because we go to the
Las Vegas race that is just a couple of weeks before. Unfortunately
we can't afford to do it all :) Have fun at your race.....maybe
you'll get to see Rusty win!

I travel often with two scanners in my carry on. They usually look at them and never say a thing. I have had to turn them on for the inspector a couple of times. The x-ray screener usually spots them and signals the inspector to check the bag. If you do not want to go through this, pack them well in your checked luggage. As someone noted, they are looked up as any fm/am/cd players. Bob

I am a rather frequent flyer and normally carry my Pro 95 in my laptop bag. It has only been taken out of the bag a few times by security and I've never had any problem. I sometimes listen at the airport. I have a son who sometimes travels as an unaccompanied minor and you are supposed to wait at the airport until the child's plane has taken off. I like to listen to the traffic and see if I can track his flight to take-off. I normally do this sitting in a gate are with an earphone. I also use the extendable antenna from Radio Shack, although I usually don't extend it all the way. Thus far, no one has said anything to me. When I go to the airport to pick up or drop off my son I usually carry a small backpack with scanner, cell phone, and other assorted items. No problems in security thus far.

The July '03 Issue of Popular Communications has a cover story about air travel and scanners.

Basic jist of the story was have it easily accessable for the screeners. As for using on teh plane, just ask the flight attendant if you can use it. Different airlines have different policies and final decision is up to the pilot.

Everyone should go to Bristol at least once....it's the best. We
lucked into season tickets about 5 years ago when they added some
grandstands. We usually sell the spring tickets because we go to the
Las Vegas race that is just a couple of weeks before. Unfortunately
we can't afford to do it all :) Have fun at your race.....maybe
you'll get to see Rusty win!

Does anyone happen to know what type of system LVPD and LVFD use?

Or perhaps a .p95 file of the frequencies?

I'm going there in the first week of July for a conference, and would
like to take my scanner with me.

Going through Indiana, a great resource is http://www.indyscan.com

Going through Ohio, a great resource is http://www.scanohio.com

I can get you all kinds of frequencies in Illinois, Indiana, and Ohio. I do
quite a bit of traveling both ways from Northeast Indiana to Cuyahoga County in Ohio,
and Washington County in Iowa. I have a PRO-94 1000 channel I use for it. I lost my
frequency list on my old computer, but they're all still in my scanner...let me know...

I have seen this coverage scheme before and I have a question. Why is there a gap between 136.9875 and 137.000?

> I have seen this coverage scheme before and I have a question.
> Why is there a gap between 136.9875 and 137.000?

On the PRO-93 and 95, the two consecutive ranges are:
start end step
108.0000 136.9875 12.500
137.0000 150.7750 5.000

If we call the end of the first range 137.0000, there is no
gap, as that range has a step size of 12.5 kHz.

But the lower range still goes to 137.000. The step size changes at 137.000.
The way it is stated it appears that there there is no coverage from
136.9875-137.000. Why not just say 108.000- 174.000?
Mike

The lower range goes to 137.0000 with a step size of 12.5.
The next step after 136.9875 is 137.0000.

> The way it is stated it appears that there there is no coverage
> from 136.9875-137.000.

I guess I don't interpret the text that way. It seems contiguous
to me.

But the lower range still goes to 137.000. The step size changes at 137.000.
The way it is stated it appears that there there is no coverage from
136.9875-137.000. Why not just say 108.000- 174.000?
Mike

Greetings All,

Forgive me if this has been posted before. Just wanted
to put a link in that will take you to the page where you can get
info about GRE's Data cable. This is the cable made by the good folks
that actually make the Pro-93, and Pro-95 for Radio Shack!

http://scanner.greamerica.com/pc_cable.html

Regards, -Jay

It's just like why do they sell something for $99.99 and not $100.00. It
makes it sound like there is more of a frequency range.

You might want to join one of the related lists:
http://groups.yahoo.com/group/PRO96
http://groups.yahoo.com/group/RS_GRE-Digital-Scanner

Price is $500 (for the radio - not to join the lists).

Don't have a P95 for the area, but stop by www.scanatlanta.com and you can get the freqs.

Why two lists?

I see the official list has very few posts, while the other one has lots. Which will be the preferred place to post once the scanner is out?

Yeah, it would complicate things to include "all of the RS/ GRE Made
Digital Scanners." That complete list includes such old favorites as the
PRO96
Pro96
PRO-96
Pro-96
and that all-time best seller, the Pro Ninety-Six!

Actually, I've found that fordyce.org is heavily outdated. Just recently,
I went through the FCC records for my county and several surrounding
counties. A lot of work, but you get the most up-to-date information.
I'm testing it now, as some of it has gone digital, and maybe I'll post
the file afterward up on the Files section. Fordyce.org is good for the
codes/signals, though.

The big metropolis of Mobile, Alabama is online. The address is

http://www.al.com/mobilepolice/

It is somewhat hard to keep up with at times, as you can't choose to listen to just one precinct or fire department at one time. This link appearantly is an open mode feed, and you can get anything from PD precinct 1 thru 4, Mobile fire, transit, and garbage pickup at any given time. All City of Mobile agencies use this same Motorola Trunked system. You only asked for working links, though, and as of Sunday morning, it was still working. Enjoy!

The railroads have been assigned a set group of frequencies
nationwide. Different railroads use different channels.

If you have a Pro93, I uploaded a file you can upload to your scanner
using the Win93 software. It's called AARChannels.p93, and its in the
files section of this group under "PRO-93/P93 Frequency Files/P93
Itinerant"

There are a couple of files for the Pro95 in the files area as well,
"Expanded ARR Frequencies.p95", and "train freqs.p95" both under
"PRO-95/WIN95 Data Files"

If you do a web search for railfan information on the web for your

area, you should be able to find the information for your location.

Alternatly, Kalmbach makes a book that lists all of the freqeucies for

different parts of the country (it's a couple of years old now).

I find that my PRO-2053 is actually fast enough that I don't need to

single out the frequencies for a given area. I also have a PRO-29,

and it doesn't have nearly the number of storage slots, so you have to

pick and choose, and even then, with 10-15 frequencies programed in,

it's not always quick enough to get parts of the conversation.

Paul Bender

Columbus,OH

I looked over the DeLorme Street Atlas (computer based) and it shows that CSX runs on the southside of the river (sorry, don't know what the name of it is) an Norfolk Southern runs the rails on the northside of the river. That should help a little.

CG,
A while back I loaded the AAR expanded frequencies into the files.
If you own a 93 or a 95 all you really have to do is load the
original 97 railroad frequencies assigned to all railroads in the
USA and Canada And let them run. Within a week you should have an
idea of what is happening in the your area. Charlestown WV is a very
active area for Norfolk Southern and CSX now.

The expanded freqs are used more in the midwest with the Northern
Pacific right now. Yet if a dispatcher or some trainmaster refers to
an "A" channel then you know to load the expanded so you can hear
return traffic.

If you have any questions I've been scanning Railroad for 25 years
and can answer pretty much any question you have. There is a wealth
of Railroad Knowledge out there so relax and enjoy yourself.

Try www.trainweb.com for a starter

At this date I'm off to Maggie Valley NC for 3 weeks, so please be
patient

Tom I'm heading back to Maggie Valley this weekend and can't say that there is really anything for a scanner to listen to up in the quad state area. I've got the aeronautical and railroad here in the files, but other then that repeaters and weather are the most reliable. Type in quotes in search; "Quad area"+"frequencies" and see if it brings up a file dedicated to government frequencies in the northwest Ga area.

email me at ajlaurence@yahoo and lets converse. I might have something but we should talk to clarify what you're interested in.

Laurence

7153. Any good blocked freqs in Sacramento, Ca?

Yahoo group: PRO-93_95 (2003)

From: whiteflagz
Topic: 7153 Message: 7153

Hi, I have the Pro-93 and recently purchased a two way data cable for it. I have tried the FM radio frequencies but they will not come in that good, I can here some kind of a signal but its really bad for all FM radio stations. I also tried some random locked frequencies without any luck.

Anyone here from Sacramento, Ca area that found some cool frequencies that you could share with me please.

Thank You,
White.

FM broadcast and TV use wide mode FM, which the Pro-93/95 doesn't support,
so it will be distorted.

San Antonio City and Bexar County was
not digital the last time I was there. I think the Federal government
and military bases have gone digital.
The City appears to have a different Trunk system for each section of
town. I am surprised someone from SATX has not uploaded a Pro95 file as
yet. Here are some of the different trunking system I have found on
Trunked radio webpage.

I'm not going, but I also have a Pro 93 and it works quiet well on the AM band near a/c. I've gone to PDK (DeKalb Peachtree - o/s of Atlanta) and hear tower, ground & a/c quite well. I'm also using an aftermarket antenna that was cut to 156 MHz (mostly since I use mine in a VHF county).

I resently purchased a pro-93. I have been trying to program it for the past few weeks. The frequencies I am trying to program are used for the entire county so it has about 50 talk groups. Can the pro-93 ignore certain talk groups and receive others? I am a volunteer fire fighter and really don't want to hear about the moving of prisoners from the jail here in Collin county. The system is motorola type 2. Any help would be greatly appreciated.

Thanks in advance

Chris

You have a choice, and you won't really like it, but you can either program by hand or get the cable. Personally, I would get the cable. Takes no time at all to do the programming with it. I started doing mine by hand, and when I realized the pain in the A$$ it was, I ordered the cable. Now when I go to different parts of the state, I can simply program in what I want and be done with it. You will find the cable a worthwhile investment.

Cris wrote-->Can the pro-93 ignore certain talk groups and receive others?

Yes, your scanner has five scan (talkgroup) list, each having up to 20 locations for ID's. Use the various lists for your 50 talkgroups and scan in the closed mode. This will keep the garbage truck out of your scanner unless you scan open mode.

Chris:

I misread what you typed. I thought you said you DON'T want to learn how by hand. Again, it is a pain to do so, that's why I got the cable. My Pro-93 is programmed up with Metro Atlanta frequencies & TRS's. I went about a 100 miles SW of here, so I went into the Win93 program and reprogrammed it. When I got back, I just uploaded the original channels back in it and was done with it.

One option you have is to go to the Radio Shack web site and download
a pro 93 pdf manual.

7177. Pro-95 Cutting off transmissions!

Yahoo group: PRO-93_95 (2003)
Date: 2003-06-30 15:37:55 UTC
From: Raymond Luxury-Yacht
Topic: 7177 Message: 7177

I noticed an issue with my pro-95 a few days ago. It seems that I'm not hearing the first 1/2 to 1 second of some transmissions. I noticed it when listening to local PD channels; for instance I will not hear a unit call dispatch (they do it by just saying their unit number), I will only hear dispatch's acknowledgement and the rest of the conversation in full, or I will not hear dispatch call a unit, but I will hear a unit respnd. I've narrowed it down to happening only when the channel is quiet for 10 or more seconds, and it happens on every channel/frequency I've tried, strong or weak signal. I sat down with my pro-95 and my old Bearcat 144xl, and sure enough, the Bearcat comes on as soon as someone keys a mic, but the Pro-95 won't come on for another full second, often chopping off the entire first transmission of a conversation.

I've had the scanner for a month, and I'm fairly sure that it was not doing this the whole time. Anybody else having this issue? It's driving me crazy!

7178. Re: [PRO-93_95] Pro-95 Cutting off transmissions!

Yahoo group: PRO-93_95 (2003)

From: Nick, KG6NMP
Topic: 7177 Message: 7178

I have a Pro 93 and it does the same thing, and I am pretty sure its a battery save "feature" although I don't think the manual ever mentions it has it. I also have an Alinco DJ-X10, which allows you to turn on and off the battery save function, and when it is on it powers down the receiver for a short period of time, it depends on the brand how long, but normally about .5-2 seconds, sometimes adjustable. You can tell its happening because if you crank the squelch all the way down real fast there is a delay before white noise comes out. Thats because even though the squelch is wide open, the receiver isn't yet on. Once the receiver powers up a half second later, you hear the white noise. When power save is off and you crank the squelch down you hear the white noise the exact milisecond you hit the noise floor. Now the question is, can you turn it off in the Pro 93/5s? That I am not sure about.

Nick

7181. Anyone near Daytona Beach, FL with a Programming Cable?

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-01 02:55:30 UTC
From: Andrew Koch
Topic: 7181 Message: 7181

Hey all,

If anyone happens to have a programming cable that works with a PRO-95 and lives within an hour or so of Daytona:

My programming cable mysteriously has stopped working, and I'm leaving for Las Vegas on Wednesday, I was hoping to get my scanner programmed before I left.

Anyway, if you do, please get ahold of me so that we can work out a time for me to come there/you here so that I can get my data file uploaded...

Thanks in Advance

There is actually a very easy way to fix that...put the scanner in
program mode when you want to listen to just one conventional channel.

7183. New Pro 95 Question

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-03 02:33:50 UTC
From: spacemaker33
Topic: 7183 Message: 7183

I bought the Pro 95 and tried to use the Pro 92 GRE software and cable to program it. While trying to do this it would only upload from the scanner. I tried it, but I didnt know at the time they are two different formats and the software will not work with the PRO95. I e-mailed GRE about the Pro92 Software/cable and they said the pc cable should interface with the PRO 95 but NOT the software.

SO with the cable and that Win95 software I can't even get my PRO 95 to give me the CLONE message. I get nothing.

Even without the CLONING message I choose port 3, the only one that seems to work, and it begins to download, only to stop half way and give me an error message.

I hope I didnt fry the scanner with the cable but GRE says it's ok, this is getting very confusing. ANy Help out here??

7184. Channel ID holding feature

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-03 02:58:43 UTC
From: bllmann
Topic: 7184 Message: 7184

Is there a way to program in a single channel ID after turning on the unit and before the channel transmits a signal? I have been able to hold the single channel ID per page 64 of the manual. However, I would like to be able to manually hold a single channel ID before having to listen to all programed ID's: waiting for the one channel to transmit.

The GRE cable will work flawless with the 92,93, and the 95 handheld radios... The GRE cable only puts the unit into clone mode when data begins to transfer to or from the radio... The GRE cable does not throw the unit into clone mode simply by plugging it in... Here is a couple things to try...

1) Make sure you have no sync software for PDA(active sync), ect... Also that you do not have the Quickbooks items installed... These monitor port activity and lock ports from other programs...

2) Find something to test the com port and make sure its enabled and functional...

3) Set port number on Win95...

4) Plug everything in and "upload to scanner" some sort of program...

5) Let us know what happens...

Short answer, no. You have to program in the ID you want to scan ahead of time, and then scan that list in the closed mode to hear just that ID and nothing else.

The GRE cable shouldn't be a problem. I use it with my PRO-92 and PRO-93 with no problems. If you get nothing, then you probably have the wrong COM port selected in the setup. As long as it is working even partially, then you must have the right port selected. As you have seen, the PRO-92 software will not work with the PRO-95. You may need to create a new file with the PRO-95 software and then try to load it into the radio again, I don't know why the download stops halfway thru the process. I've never had that problem. Try dumping the radio contents into the software first, and see if that works.

The only way I know is brute force - set up one of the 10 banks as a closed bank with only the channel ID you're interested in listed. This is a perennial frustration with these scanners.

From: richb8s
Topic: 7189 Message: 7189

I'm having trouble opening the files. When I click on the file the
file download screen pops up, when I click on open- nothing happens.
Do I need to save the files to a disk or what. Also how do we
download the files to the pro 95 using the cable? I got my cable
from purple computing the other day and I'm eager to set it up.
Any help would be appreciated.
Richard

Topic: 7189 Message: 7190

I'll assume that you're using Win95...

When you download a P95 file, select 'Save', not 'Open'
After you've saved the file locally, open Win95
Select File->Open via Win95's menus
Browse to the location where you saved the P95 file
Select the P95 file and click 'Open'

You may be trying to clone using the buttons on the radio. These are only used when cloning from radio to radio, not PC to or from radio.

To "clone" from/to scanner use the Scanner pulldown menu in the Win95 program.

I finally got the Scanner Programmed. Put all of my Trunked State Police Frequencies in Bank 0; I used only the Control Frequencies. It seems to be trunking fine.

Later on when I had time, I put the Boston Police Conventional/FM frequencies in Bank 1.

With the Boston Police in Bank 1 and the State Trunked Control frequencies in Bank 0, the Trunked State Police Bank 0 has gone silent when I fire the Pro 95 up with both bankns cooking.

ANy ideas what I am doing wrong?

BTW: The GRE Cable from the PRO 92 works fine, but I havent tried to upload anything from the scanner to my PC yet......but I bet it'll be OK.

You can only put one trunked system in each bank. When you
try to add two or more and you add a second bank it looks for
the control channel in that first bank and then conventional
frequencies.

I don't care if you think it is working, it really isn't working
properly.

7195. Select talk group manualy?

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-04 03:42:30 UTC
From: coastertaz
Topic: 7195 Message: 7195

Is there any way to select a group ID (a stored group ID) when running in closed trunking mode without waiting for it to become active and using ID hold?

EXAMPLE: I would like to turn on the scanner select a group (usualy a specific precinct band) then be able to switch to another specific group (to listen to a car to car communication - this car to car channel is a group on the trunked system, not a non trunked repeated or simplex frequency) and than be able to switch back to the origional talk group all without having to use the scan and ID hold feature. Basicaly I would group IDs to behave like channels.

I haven't seen anything in the manual to suggest it's possible. (Could've missed it).

Negative--this is one of the few gripes I have with the 93/95. The new 96 (October/November '03) will provide a way to that. The Unidens can do it but lack other features (I won't get into a debate on different scanners). You will just have to wait for the talk group to become active then hold the TRUNK button for 2 seconds. Locking out other talkgroups that are not in use (or not important at the moment) may help a little.

The only way you can do that is to put the control channels in 2
banks with just a single talk group in each bank, then you can just
turn the banks on and off.

You can only put one trunked system in each bank.

Best Regards, Keith

Not true, you can put as many Mot trunk systems in a bank that you have room for. Use the control freqs only. The scanner will work on the first control found until you loose it or force a new control by manually finding another then press scan, you now will stay in that system until you loose it or force another control.

This is true, and a very good way to conserve space in the scanner.
If you monitor two or more systems out of range of each other it
works good too. You don't need to lock out the other control
channels, just turn the ID sub-banks on for the system being
monitored. When you travel to a different area turn on the sub-bank
for that area and the scanner will automatically pick up that control
channel.

Topic: 7208 Message: 7208

I keep getting an error when trying to download from my Pro-95 to my laptop. The message is "Timed out wating for 33529 data bytes, received 33522".

I tried this with 2 different scanners, and 2 different cables. Same problem with each configuration. No problems uploading from the computer to the scanner.

I'm using V00.13 of the WIN95 software. I think I was able to do this before with one of the earlier versions with the same scanner, cable, & laptop.

Any suggestions?

Also, Contrary to what Rat Shack says, the Pro-79 CANNOT be programmed form a computer. it has NO PC/IF and when I tried to use the software, following the directions, it didn't work.

Sure enough dude here is a link to radio shacks manual for that
scanner. Hope it helps.

http://www.radioshack.com/ProdSupport/DocumentDetail/DocumentDetailInd
ex.asp?P=support_electronics&D=2849&T=htm.

Just cut and paste into
your web browser and there you go.

Your port must be correct if you can write to radio. Under the
Configuration menu, select Serial Port then check the block Extra
Write Time.

In addition to Frank's suggestion, you might want to also try downloading on a different computer. Some people have had problems on one machine, only to have it work on another. Potential reasons for this include (but are not necessarily limited to) operating system, other software running and interfering with Win95, and specific serial port hardware on the PC.

Look in Files, Pro-93 folder/Frequency folder. This file is about one year old, but I could not find a trunk listing for Minneapolis other than 9600 digital which cannot be tracked by the 93 (nor any scanner on the market today).

http://www.starrsoft.com/
Get Don's WinXX Data Converter at the above link. The p93 file for
Mineapolis is a converted spg file. This tool is a lifesaver.

FYI---I just ran across this bit of info----a sad day

Tony

If you do a whois lookup on the domain name you'll see that Rich didn't pay
to renew the name strongsignals.net and the name expired back on
6/27/03. So it looks like he either forgot or just gave up on operating a
website.....

Sorry to see it go as I liked it and enjoyed posting to it. Hopefully its
just an oversite on Rich's part or an error somewhere.

George

This was posted by the owner of the NW scanner forum.
... Mon Jul 07, 2003 10:22 am ...
"Its a problem with their domain registrar. GTLD-Servers.net (one level down from the root servers) can't resolve or refer it."

There was also mention of hacker activity that may have caused some problems.

It would be unlike Rich to forget something like that, but anything is possible.
Dick

Thanks for all the support and kindness, guys!

Just got back from vacation and noticed that I could not get my e-mail.
Just dawned on me to check my site registration and it had indeed
expired. Could have sworn it was next year.

I did apply for renewal so we'll see how things go!

Thanks again and happiest of monitoring!

Strong Signals,
Rich

From: Russell Adams
Topic: 7225 Message: 7225

You can also add this entry to your local HOSTS file and it will work
properly;

216.157.100.253 www.strongsignals.net

On Windows NT/2000/XP this file resides in the system32\drivers\etc
directory. On other systems search for HOSTS.

7228. Scan problem?

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-11 01:58:29 UTC
From: BillPritJr
Topic: 7228 Message: 7228

I have all the freqs in the scanner, with OPEN MODE selected, and the scanning only stops on a few channels. When I manually go thru the channel list, many channels are indeed active, but in scan mode, it only stops on a few. ATT is on "Normal". I have Radio Shack 800-mhz scanner antenna rubber duckie (just came out) installed.

could only "very strong" signals trigger the scan to stop?

side note, I installed Maha Energy PowerEx 2200 batteries, and the scanner was turned "ON" on Tuesday at 8 PM and didnt die until Wednesday at like midnite.

Is this a turnked system in the bank? Do you only have the turnked frequencies in the bank or do you have them mixed with conventional frequencies? What type of trunking system? Have you adjusted your squelch (I know it is basic but just checking).

Ok, first check to make sure you have set BOTH the whole bank and each of the frequencies that are associated with the trunked system to MOT. The conventional frequencies should be set to FM. If those are set and you are running the talkgroup setting to open you should be able to track the trunked system and listen to the conventional in one bank.

Make sure you only have one trunked system in a bank (or at least one trunked system that has a active control channel). Also check to make sure that you have the frequencies of the trunked system all entered properly (no miss type) and again that both the whole bank and each of the trunked frequencies is set for MOT

You might try to manually listen to the control channel and make sure you have a good signal on it. If you are getting a good signal on the control channel it should track.

Also double check that you do not have any of the frequencies in the trunked system locked out accidently, that would cause them to be there when you manually stepped through but not on scan.

You may have tried these but hope there is something there that helps, these are the most common problems with tracking the trunked systems.

By the way, the Don Starr software (free) and a cable make the setup of the scanner much easier and quicker if you do not have that you may want to look into it.

Let me know if it works out for you

Mike

Is this a turnked system in the bank? Do you only have the turnked frequencies in the bank or do you have them mixed with conventional frequencies? What type of trunking system? Have you adjusted your squelch (I know it is basic but just checking).

---------- Original Message ----------

I have all the freqs in the scanner, with OPEN MODE selected, and the scanning only stops on a few channels. When I manually go thru the channel list, many channels are indeed active, but in scan mode, it only stops on a few. ATT is on "Normal". I have Radio Shack 800-mhz scanner antenna rubber duckie (just came out) installed.

could only "very strong" signals trigger the scan to stop?

side note, I installed Maha Energy PowerEx 2200 batteries, and the scanner was turned "ON" on Tuesday at 8 PM and didnt die until Wednesday at like midnite.

From: Whispering Pines Farm
Topic: 7228 Message: 7235

I wonder if he is having the same problem understanding the trunked channels as I had. When you go through manualy, you do indeed pick up activity on many channels, yet those many channels are all sent to the two or three data channels used each day so that all the Pro-95 goes to. So what your hearing when you scan manualy, you will hear only on your data channels when your in scanning mode. This whole thing confused me to, but once the people here explained what was going on, I knew.

In defense of the Pro-95. Its actually the easiest scanner I have ever used. Its practicly worry free.

I'm afraid you are still confused. The only thing you will hear on
the data channels is the buzz of the data that controls the radios.
There is no audio on the data channels.
In CLOSED mode you will hear only the talk groups you have programmed.
In OPEN mode you will hear all talk groups.
Read page 68. Prssing FUNC 5 toggles between OPEN and CLOSED modes.

7238. Weird Scanner Pro-93?

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-12 18:17:13 UTC
From: whiteflagz
Topic: 7238 Message: 7238

Hi, I have a Pro-93 scanner and really enjoy it. But recently I noticed something weird maybe even a bug. I only have all of MOT trunking control data frequencies stored for one trunking system in one bank, 4 total frequencies for my city. The scanner works great. It switches to one of the four control when it should if the scanner is it SCAN mode.

But the problem I noticed is when I put it in ID HOLD mode, it works fine until the Control data frequency change, then I hear nothing. I think the scanner just sits on the same control frequency when I put the scanner in ID HOLD mode. This really bugs me now because I don't know if I am missing the people talk when its on HOLD.

Anyone ever noticed this?

7239. Pro 96

Has anyone bought, experienced, or heard anything on the Digital Pro 96?? I saw this on a website and was curious. I hope the new technology doesn't have to go throught the rigors of continual software updates.

Monday, June 16, 2003
Radio Shack PRO-96 digital trunking scanner
[Source: FCC; Radio Shack]

Radio Shack PRO-96 Digital Trunking Scanner
"This handheld scanner has an abundant memory capacity, able to store frequencies in 5,000 memory channels. Plus, you can store up to 15,000 ID codes so you can quickly and easily find what you want to listen to. This scanner follows trunked systems. More and more cities are using a these trunked systems, allowing city services to share the same set of frequencies. As a result, a conversation can start on one frequency, then shift to a different one. This scanner can follow these changes."

FEATURES
☐ Picks up local marine, police/fire, Ham, VHF-air, racing, weather and virtually every other frequency as well
☐ It's preprogrammed☐if you live in a major metro area, your city's system is probably already loaded
☐ Sweep Search function locks quickly onto on-site transmitters
☐ Backlit display
☐ Channel scan
☐ Frequency coverage: 28-54, 108-136, 137-174, 406-512, 806-960MHz (except cellular), 1240-1300 MHz
☐ Follows analog Motorola I, II, I/II and GE/Ericsson (EDACS) trunked radio systems
☐ Requires 4 "AA" batteries

Ok, thanks. Well, I have seen the FCC tests, and info, and have also found various scanner forum sites that discussed this scanner. It seems that all of the complaints do not affect me at all.

First, is the absence of the LTR trunking reception capabilty. For my area this is useless anyway. Second, no priority while in trunk mode. Who cares>> Lately my priority channel has been an irritating pain in the ass. Last, was the voice decoding system. Seems there are different types, and the 96 has a distinct one in it. Have to admit I am green with the voice decoding, but the 96 seems like a winner to me. Plus, it looks cooler than the Uniden.

It seems strange,but actually very typical, that many of the complainers are Uniden owners. Well, no offense to Uniden die hards, but the first one I bought I sold within one week after getting it. I prefer the setup of GRE. I also stuck with my Pro 93 when everyone was complaining about it, and also dealt with the poor reception of my Pro 92 until I got the update. I still haven't sold any of my Pro's. I still have my old 2030, and my 2006.

My bottom line and two cents: I'm sticking with the SHACK. Think I will be purchasing a 96 as well.

I don't consider one upgrade to be "continual rigors". Sense 3.25 and 3.28 are essentially the same, and I think all V1's sent in to DFW were upgraded to 3.28.

I still use without problems V1 in my 92 and the manufactured 3.25 in both 2067's. I agree with you about GRE vs Unidens, though the 785 is a must at this time in my area due to 3 digital systems.

Hi, I just got my PRO-93 at a ridiculously low RS clearance price of $79.95. Take away the $50 in gift cards I'd been given and the radio cost me $30 + tax.

I didn't experience exactly what you wrote about, but something similar. A friend had dumped his computer file into my 300 channels. I was then listening to ALL the programmed trunks to find what I could pick up from my home when I noticed that my local city's TRS was completely dead. When I switched to manual, I found that the active control channel was locked out. When I unlocked it, I got normal reception on Scan.

I then realized that the radio picks up the control channel first in conventional mode before it operates in trunk mode. The older PRO-90 does the same thing, so this must be how it's designed to work.

Now re what you write about.... when you use ID HOLD, you evidently throw the manual side into a hold also. When the control channel changes, the scanner is still stuck on 'manual - hold' and will not look for a new control. Hence, your loss of the entire TRS system.

As to whether this is a "bug", it probably is not. Think of it as a "design flaw" instead.

Toby

Yes, I noticed the same but scanning EDACS. If the system changes the control channel or the signal of the control channel becames weak the scanner lost the transmission for the I.D. that you select.

I agree. The GRE scanners are so much easier to use than the stupid menu system on the 780XLT,
785D, and 250D...The free software you can get for the GRE scanners is much better, too, from
what I've seen...

I don't know about the Voice Decoder thing, but the PRO-96 is all automatic. You don't have to
"turn on" the digital. You don't have to set anything but the mode. The PRO-96 will do 9600 baud
FULL APCO-25 systems without a thought from you, the user...

That's a winner in my book...

Thats a pretty bad design flaw I would say, No manual group ID select and when I use ID HOLD it doesn't scan for Control data freq :(So the only solution is to dedicate the whole bank just for a single ID and set it to Closed Mode. I wish we had more Banks.

Thank you very much Toby Zidle and Eduardo Cruz for your replies.

Interesting discovery you've found. I have been using the Pro-93 since shortly after it came out. I monitor about 8 different trunked systems. The inability to manually select a talk group is sometimes a pain in the rump but I've learned to live with it (BTW the new Pro-96 should allow manual selection of trunked talk groups). As far as holding on an ID, I just press and hold the "trunk" button for 2 seconds when the talk group I want becomes active. I can then continue to monitor all comms on that talk group. For some reason it seems you are losing the control channel. I would think that if the signal strength were poor you'd be getting nothing whether you were scanning or holding. Make sure you have the mode set to "MO" for your control channel freqs. Of course if you didn't the scanner would be stuck on the control channel and you'd hear nothing but data transmissions (no voice). As far as control channels changing, this usually only occurs only once every 12-24 hours. One of the systems I monitor has been on the same control channel for almost 2 years! I've never had the control channel change while holding on a talk group so I guess I'm lucky. I can't imagine that you are affected by this very often unless control channels in your area are rotating every few minutes or you hold on one talk group for long periods. I'm not sure if this flaw exists on the new Unidens (I have one but it's collecting dust at the moment--I love my 93)

Tony

Well then I must have defective scanner then, and other members here as well. If I go through manualy and listen for the data channel sound, then lock out all the trunked stations but those two that I got the data channel buzz from, then hit the scan button, I get activity from all the locked out trunked stations, on those two that I got only a data transfer buzz in manual.

Why does that make the scanner "defective"?

That sounds like perfect trunked system behavior.

I got the Pro-93 programmed correctly. Its a flaw in the scanner as others confirmed this also. In my city, we have 2 trunking systems, one is the county system and the other is a city system. Each system use 4 frequencies, 1 at a time for the control data. The frequencies rotate within 24 hour period. It depends on your monitoring habits for the ID hold mode to affect you. Sometimes I like to follow undercover agents when they chase around some drug dealer or go to a place of a drug bust or maybe just listen to one Police channel for the area which I am in like South channel 4 or North area channel 1 . Well, while monitoring all talk groups, I would hear something that interests me so I press TRUNK and put a HOLD on that ID so that I don't miss anything. It works fine for a while then the scanner goes dead, meaning the control channel changed and nothing is heard until I turn HOLD off, during this time the drug dealer might have made a turn or stopped some place. Now that I think of it, I really hate the damn HOLD feature because of this flaw. I will try to see if they rotate the control data frequencies at certain time of the day, everyday, this way I can look at the clock and turn the HOLD off during the frequency change which is a hassle.

Another thing I could do is program two banks for same system. One bank would monitor all groups and once I hear some sweet group ID active, I can go into Func+Trunk and add that ID in the second bank, and close the bank with just that ID. And turn the first bank OFF, second bank ON. This would be just as ID Hold mode and it will follow during the control data frequency change. Its also a hassle but the best idea so far.

I can't think of any better way to go around the ID Hold flaw. I sure miss the manual group ID select feature that my old Uniden had that I got rid off, I think its was Bearcat 235.

7253. New Radio Shack 800 mHz Antenna

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-14 14:14:26 UTC
From: Joe Hathaway
Topic: 7253 Message: 7253

As everyone has said, this is the best $15 800 mHz antenna ever offered, without sacrificing other bands of coverage. A base-loaded super flexible handheld gain whip, the 20-283 vastly increases my ability to monitor distant trunked systems. However, a word from experience which will not surprise the more experienced scannists, but newer members "tune in" every day:

A large portion of my town, relatively close to the primary transmitter site, was always weak and scratchy on my PROs 93 and 2053, and VHF high was clobbered by paging towers. Although the new whip on the 93 enabled trunked reception 40 miles north of town, the "weak" area just got worse. This made me remember to try the Attenuate function, which greatly IMPROVED reception close to downtown. Now, when entering this area, I just remove the antenna entirely, and reception is perfect, and interference from paging towers is non-existant. The moral, if you have not tried it: When in a "weak" area which should be a strong signal location, or when overwhelmed by cross-modulation, try the Attenuate, placing the radio in a poor-reception area of the vehicle (in or alongside a steel surrounding), or removing the antenna entirely. You might be surprised at the result!

Joe

If you're referring to message #7236 by rh1067:
The only thing you will hear on the data channels is
the buzz of the data that controls the radios. There
is no audio on the data channels.

The above is absolutely correct. In a MOT system, the
control channel ("data channels") carries no audio
communications. The CC merely tells the scanner "talk
group #xxxx is communicating on frequency yyy.yyyy".
The scanner then tunes to that voice frequency. It
doesn't matter if you have the "voice frequency" locked out
or not. In fact, on a CC-only scanner like the PRO-93
or PRO-95, you never have to enter the voice frequencies
at all - the scanner will tune to them based on the data
received in the control channel.

In a MOT system, the scanner's display will indicate the
frequencies in use:
Line 2: Voice frequency
Line 3: Alpha tag for control channel
Line 4: Talk group ID (number or Alpha tag)

I really love the Pro-93 or Pro-95 for this. Its really easy to go to any city and just use TUNE to find a buzzing sound then store it with FUNC+ENTER as a MOT frequency. After this, the scanner is ready to be used. But I also from time to time hit MANUAL to check if the Control frequency changed or not. If that happens, I search for a new one and add to the same bank. BUT, the best method is to find all the frequencies for the city you are going to in advance and use Win93 or Win95 to write them to scanner. Those are sweet little programs oh they are free :o)

I agree. The GRE scanners are so much easier to use than the stupid menu system on the 780XLT,
785D, and 250D...The free software you can get for the GRE scanners is much better, too, from
what I've seen...

I don't know about the Voice Decoder thing, but the PRO-96 is all automatic. You don't have to
"turn on" the digital. You don't have to set anything but the mode. The PRO-96 will do 9600 baud
FULL APCO-25 systems without a thought from you, the user...

That's a winner in my book...

From: michaelc1964
Topic: 7228 Message: 7258

OK, be charitable to a newbie here...

What I interpreted this message, the bottom one specifically, as saying is the following: find the control frequency and then save it, and the scanner finds the talk frequencies and programs them in in - I assume - subsequent channels.

Is that right?

It doesn't sound right.

My second question has to do with channel modes. Let's say there are 8 active frequencies in a trunked system, and one of them, obviously, is the control frequency (let's say MOT, because that's what I'm most familiar with). And let's say on my scanner, channel 101 is the cntrl, 102-107 are talk. On channel 101 I'm setting the mode to MOT, but on channels 102-107 do I want them set to MOT or to FM?

I know this is basic, but I have had different results doing it either way and I can't make sense of it all.

Thanks.

MC

Thanks Don,
As always you have clarified a question for me before i have had the opportunity to ask.

I just returned from Maggie Valley in western North Carolina. My route home to Orlando is down the I-26 to I-95 to I-4. I was able to set my 95 in the police 800 band area and wait for every buzzing "VC" channel in NC and Ga, which I copied to channel 9. Now I have over 50 VC's and no way to know whose is whose. Some I know belong to Spartenburg, Columbia, Orangeburg and Savannah, but the remaing 30+ have me miffed.

Now my question to anybody is: Is there a site that lists the Motorola channels to their owners?

Years ago there was a web page that listed city's or agencies and their VC along with the Motorola designation. His last comments before pulling the page was it was to much work to keep the data accurate. I realize with today's heightened sence of security that I'm asking for the proverbial pot of gold at the end of the rainbow. I have had access to many Bearcat web pages and to others that have not been updated for several years.

Last, I would be happy to make my raw research available to anybody who travels the same area I do. I'm still wondering what South Carolina and Georgia Highway Patrol uses for a communication network. During the entire time I traveled (12 hours) I never heard any communication from any of the dozen patrol cars I saw stopping vehicles.

Ya'll have a great Day
Laurence

This site: http://www.qsl.net/kc4oxt/ should help answer your questions for the South Carolina frequencies. All of the trunked systems in SC are listed.

>Is that right?
>It doesn't sound right.

No. It's not right. In your example, the voice frequencies
are never "programmed" into the scanner. The scanner merely
tunes to them when it hears about traffic via the control
channel.

>My second question has to do with channel modes. Let's say
>there are 8 active frequencies in a trunked system, and one
>of them, obviously, is the control frequency (let's say MOT,
>because that's what I'm most familiar with). And let's say

>On channel 101 I'm setting the mode to MOT, but on channels
>102-107 do I want them set to MOT or to FM?

You don't even need to put those other frequencies into the
scanner (unless, of course, your local system changes the
control frequency periodically, using one of those other
frequencies).

Here's a greatly-simplified (but good enough for "the scanner's
point of view") explanation of a MOT system:

1. There is at any given time 1 control frequency, and one
or more voice frequencies.
2. All of the radios in the trunked system know what the
current control frequency is.
3. When a radio wants to "talk", it sends a request to the
controller on the control frequency. It essentially says
"give me a voice frequency for talk group nnnn".
4. The controller responds with a message heard by all
radios: "talk group nnnn transmitting on fff.ffff".
5. The transmitting radio tunes its transmitter to frequency
fff.ffff. All other radios that are on that talk group
(and are not "busy") tune their receivers to fff.ffff.

Your scanner acts like one of these receiving radios. It hears
the "talk group nnnn on frequency fff.ffff" message on the
control channel, then tunes its receiver to fff.ffff.

When receiving such a transmission (on a MOT system, at least)
the scanner will display:
Line 2: VC fff.ffff the voice frequency
Line 3: Bank 1 Ch 22 the alpha tag for the channel in
which you've put the control freq
Line 4: abcdefg either the talk group number, or

an alpha tag that you've entered

If you're running in OPEN mode, then you'll hear all traffic
on the trunked system.

If you're running in CLOSED mode, you'll only hear talk groups
that a) are programmed into the scanner, b) are not locked
out, and c) are in an enabled "ID sub-bank" (each bank has
5 ID sub-banks, each sub-bank can hold 20 IDs).

Note that the control frequency can change at almost any time.
A typical system might have 10 frequencies allocated to it,
and might use 2 or 3 of those as control frequencies. In order
to monitor the system, you need to enter all of the potential
control frequencies. If you get your information from the
trunkedradio.net database, the control frequencies are shown
in red.

If you do want to put in all of the system's frequencies,
perhaps because you don't know which might be used as control
frequencies, then set all of them to MO.

-Don

7262. Re: Scan problem?

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-15 15:22:10 UTC
From: fmon1
Topic: 7228 Message: 7262

Question 1. The meaning is if you have the control programmed as indicated by the previous post (search+control buzz) then store with FUNC+ENTER as a MOT frequency (make sure its MOT). Press SCAN and the radio will track that system in the OPEN Mode. When the scanner stops on a communications the voice channel (freq) will be displayed on the second line. This freq is not stored but is a part of the system, others will also appear as you continue scanning the system. This is Control Channel Scanning. If the control changes at midnight, as it does in my area, you will not hear anything tomorrow unless you find the new control as he also indicated.

Question 2. If you have a rotating control, as most systems do, unless you know the control frequencies set them all as mot. If controls are known, then you need only program them in your scanner. As mentioned above, the others will appear on line two when assigned by the control current control. The unused rotating controls will also appear as voice frequencies if assigned by the current control.

Georgia State Patrol is still on 154.680 {base to car} and
154.800 {car to base}. All post use these frequency except
troop C in Atlanta which is mainly on 155.910.

hello,
I have a radio shack black padded carry case with wide belt loop
and a nice velcro closure.
these were discontinued from radio shack some time ago.

they fit the pro93/95 perfectly!!!!

I only have one, its brand new never opened.

$10.00 plus ship.
thanks
Bob

7266. Pro-92's and Pro-93's clearance at RS 49.95$ YMMV

I bought a Pro-93 on clearance, and it was version 1.00. You can turn it in and get a warranty repair to version 1.03, the latest version. I just got mine back today, it was gone for about 15 days. The manager was a dick and told me it wouldn't be covered under warranty, and didn't beleive me when I said it was broken; but when it came back today he had egg on his face and it was covered (I knew it would be). So yes, if you have an old version and it is still covered under warranty, you can get a free upgrade to 1.03.

I also have a Pro-2053 that is 1.03, now I match.

What's the difference between the PRO-93 version 1.00 and 1.03? I didn't think there were any user noticeable differences.
I know there were differences between the three versions of the PRO-92, and there was a noticeable difference in performance between the original PRO-92 and the so called PRO-92A.

The control channel is a continuous noise, like a rumbling motor. If you don't hear anything, then it's the wrong control channel. The control channel has no voice traffic on it. A trunked system might have up to four frequencies that are used as the control channel, but only one at a time. Try a different frequency in the system.

Ken

As far as I know there are no real 'performance' differences between old and new 93's, there were a few bugs that get fixed, however. In EDACS trunking, if you had priority channel turned on you would hear the control channel sometimes. I don't have a local EDACS system so I never noticed. The big one, Bannks 1 and 2 alhpa tags showed up when you were in banks 8 and 9 also. There is a full bug report list around somewhere, I think there are a few more little issues... those are just the ones I remember.

Well make sure that it is the correct type of system. This
is a sound sample of a mot type II
http://www.kilowatt-radio.org/salem_control.wav
If you are listening to a Mot type I then you need to program
in the fleet codes.
You could also be listening to a another type of system or data (MDT?)
channel.

Also make sure that you have not locked out the Control Channel frequency just because there is that terrible buzzing noise on the frequency. If the Control Channel frequency is locked out, the trunking side of the radio never receives anything and your system is, in effect, dead.

Are you doing FUNC then 5 to CLOSE that bank? Once you close it you will see a "-" under the number of that bank when its Scanning. You do FUNC then 5 when you here someone talk not when its Scanning.

0123456789
-++++---++
Above Bank 0,5,6,7 are Closed, the rest are Open. When in Closed mode, you will here Group Id that have been programmed for that bank and NOT locked out.

Hope this helps.

7282. question about the Pro 95

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-17 18:04:35 UTC
From: mike massaro
Topic: 7282 Message: 7282

Hello All,

I am new to this group and have just purchased the pro-95 scanner from Radio Shack. I noticed that with this scanner, you have to wait for an ID to pop up and then you have to hold down the TRUNK button to lock in and monitor that ID. I was wondering if anyone knew if there is a way to manually scan through trunk IDs and listen to one ID at a time?? I used to have a Pro 90 and you could manually scan through the IDs stopping to monitor any ID you choose. Any help or feedback would be greatly appreciated.

Thanks,
Mike

Do you Yahoo!?
SBC Yahoo! DSL - Now only $29.95 per month!

Everyone I know that have the Pro 95 or 93 really miss this feature. There is no way for you to manually scroll through the Group IDs like on Pro 90. What you can do is pick some free BANK and program it with just one or two Group IDs that you are really interested in, then put this bank in CLOSED mode (FUNC+5). This way you only listen to what you want.

7284. Cool surprises at Rat-Shack!!

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-17 20:19:17 UTC
From: Tom
Topic: 7284 Message: 7284

It's DEAL time:

For those who (like myself) had been wanting one of those rather "neat" R/S 20-009 (mini-speakers) Lapel-Speakers that plug into the scanners with the standard 1/8' Jack (or most anything else, like Ham Rigs), I found a great deal!

I went in to see if they had one of those $9.95 clipon speakers, and when they scanned the one they found "in the back room", it came up as $0.97!!! - (Devalued Closeout) -- I bought 4!! :-)) I have used these in the car, clipped onto a sun visor, etc., and they work great!

While there, I noticed they had those 19-316 VOX/PTT headset-Boom-mike gadgets for Alinco, Yaesu, Icom, and R/S equipment at $4.97 Clearance. - When they scanned it, it came up (devalued, again) at $2.97 -- I bought 2 :-))

All too often, their remotely-computer-set "devalued" price shows up and surprises them! - If you see something, ask them to scan it - You both might be surprised! :-)

Tom, W4NOV

Topic: 7292 Message: 7292

Hello all...need some help from someone with manual programming experience.

I was manually entering a freq and was entering teh text field when my clumsy fingers hit something and the field went blank. I thought I hit clear or something and entered the name again. Now every time the PRO-95 stops on any freq, that text field shows up.

Any ideas what I did and how to reverse the effects?

Thanks..Mark

Do you mean the Text on 3 line of display? I believe they are called Altha-Tags. Are you scanning a Trunking system? Because they text you would see is of a Control Data frequency. The default text is Bank # Ch ##.

What you can do is manually switch to that channel where you typed in the text, right down the frequency on paper, now press PGM to swith to programming mode, then press FUNC then CL, this will wipe out the frequency. Finally re-enter the frequency and press ENTER.

Let me know if this is what you were asking about.

I got my PRO-93 for $79.95. The Plano TX RS computer showed only 1 radio in stock at McKinney TX and 1 radio in stock at Sherman TX (about 50 miles away). I called Sherman and they shipped the radio to the Plano store at no charge to me.

You are right about missing accessories. In my case, the PRO-93 was missing the antenna and the manual. Sherman ordered both parts from the distribution center at no charge to me. They arrived at my home the same day the radio arrived at the local store.

The one problem with waiting to get a lower price is that there may be none left to lower the price on.

Are you doing FUNC then 5 to CLOSE that bank? Once you close it you will see a "-" under the number of that bank when its Scanning. You do FUNC then 5 when you here someone talk not when its Scanning.

0123456789
-++++---++
Above Bank 0,5,6,7 are Closed, the rest are Open. When in Closed mode, you will here Group Id that have been programmed for that bank and NOT locked out.

Hope this helps.

7297. New Pro95, hiss in audio

Yahoo group: PRO-93_95 (2003)

From: tvsteve1
Topic: 7297 Message: 7297

Can't get full quieting on any signal. There is a hiss in the audio that my other radio's don't produce. Tried with external speaker and antenna, same with both. The supplied antenna stinks compared to other ducks I have. Used my R7000, IC-746, Uniden BC65XLT and my trusty Regency MX7000 to compare. Is this normal or did I get a bum radio?

BTW my data cable I made for the IC-746 works great with Win95 and the Pro95.

I went to my local Radio Shack store and asked if they had the 20-044 ant. for .97 cents, and said that they were all out. I asked them to check other local stores in my area, which they did and located one at another store about 100 miles away. I asked if they could contact the other store and have them send the ant. to this store , but they refused to do so. They said that they were loosing money already on the ant. and would not send any discontinued sale item from one store to the other because it cost them more money.

Now that's customer service!!

That would be stretching it a little too far to think they would ship a 97 cent item 100 miles they might just as well give it away at the store that has it.I just for the heck of it had my manager do a check for the pro-2067 nothing in the district and they can check further if you don't have a dweeb checking.There is one 2067 on the whole east coast and he was going to call the store and have it shipped for nothing $99.97 but i said i was just curious as the ? came up here.

7302. cable for pro-93.. ebay

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-21 15:11:27 UTC
From: Chris Jernigan
Topic: 7302 Message: 7302

I have seen the pro-93 cable on Ebay for 10.97 (if you bid .50cents) plus 5$ shipping..
or you can buy it from the guy for 17-18$ plus shipping, using buy it now.

It is the same guy who is selling them on www.pro93.com for 22$, i think.

also you can print the manual off of radioshack site..

cj

(anybody who buys the pro92/93 etc should get the 50$ price, i think
its nationwide. Mine was 50$, great condition..
came with yellow charger battery holder, antenna, belt clip, thats it.
(i didnt need anything else, other than the programming cable, and
I used my ICOM RC-10 cable as a 1 way upload cable, works great).

Anyone want to buy a bc245xlt or an icom Rc-10?

used a thin application of clear silicone sealant from a tube--let dry overnight. just make sure you clean the old adhesive off the the rubber pieces and the radio itself first.

Thanks Dave, That's what I found also. NO If I decide to buy, rather if my wife lets me buy, I'll wait till late March early April when Radio Shack will cut the price in half because nobody was willing to pay for the 96 at their inflated price. So I figure the 96 will go for roughly $259.99 by April 15th.

The 96 is worth it even at $500 because you can store up to eleven different configurations for programming internally which makes about 5,500 channels instead of the 500 they advertise. The following is a quote from the Pro-96 manual available on the web:

V-Scanners
A V-Scanner folder contains a complete, stored configuration profile of your scanner's programming. Certain current scanner models allow the user to load, save and edit different scanner configurations using an interface cable, software and a personal computer. The PRO-96 V-Scanner feature extends this functionality by allowing you to store or recall up to eleven scanner configurations in V-Scanner folders on your scanner, without using a personal computer. You can use the V-Scanner feature to build and store configurations for different areas or different scanner applications. Using the cloning feature it is possible to exchange scanner configurations with your friends without losing your existing data. V-Scanners also provide a way for you to easily back up your programmed data without connecting your scanner to a personal computer.
Each V-Scanner folder stores all channel storage banks, channels, trunking Ids, search settings, and other parameters associated with the operation of the scanner.

Oh well as of right now I'm having fun listening to my 95 and its enhanced ability courtsey of Don Starr. I wonder if he's had time to see if there is anything new he can make the 95 do.

I can safely say that it may go as low as 399.99 but nothing less at best... Most likely it will be 449.99 at sale time... They usually run these within the first month of being released to spark interest in new product...

You'd be surprised at what everyone is willing to pay, considering the alternative is $100 to $200 MORE...

I for one will be getting it ASAP, whether my girlfriend agrees or not. She learned early on that she has no say in my Communications hobby!

Clean well and use 3M Super Weatherstrip Adhesive (Find in auto parts
store), or contact cement. Apply on both surfaces, let dry and bond.

The cable will work with the two adapters that will - first: increase the size of the plug - second: change the plug from stereo to mono. The FA-126 will work on a serial port or you can used a USB to serial adapter. I use the Belkin F5U409.

7317. Dual Watch Function

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-27 08:30:41 UTC
From: labdog98f
Topic: 7317 Message: 7317

Just wanted to pass on a tip that you may not have discovered:

I take my daughters out to watch planes at D/FW Int'l. Airport's Founders Plaza periodically and I take the trusty scanner with me to listen in on Ground Control and App/Dep Clearance. Since I did not want to waste a bank to monitor two channels and did not want to do the "Function/Lockout dance", I discovered that I can enter one freq. in the TUNE section and PAUSE it; then program the PRIority button with the other freq. and turn the PRIority function on. It will now perform a kind of "dual watch" where it stays on the TUNE freq. but checks the PRI freq. for activity also!

Hope this can be put to use for others on the group!

Scott

7318. Help w/Columbus OH freqs

Yahoo group: PRO-93_95 (2003)
Date: 2003-07-27 22:14:39 UTC
From: C Gutta
Topic: 7318 Message: 7318

There are 2 files in the file area of this group for Columbus. I am moving there in 4 weeks and would like to know from someone the lives in the area which of these files is the best. I have had a trunking scanner for a year and have yet to be able to use it because nobody around me uses a trunked system. I can't wait to seem my scanner come to life with this activity. I am going to buy the 800 mhz antenna from RS before the move.

Thanks for the help guys.

I have learned alot from this group already.

7319. Lapel speaker volume low

See volume mods in these groups for this radio... It takes a small
wire and a bit of solder... 5 minutes you are done, and it will
blast you if you use an earbud...

Another option is to use one of those round type flat wire end connectors on the earplug end an wrap the other end of the wire around the BNC connector. Even simpler just use a small gauge wire and wrap it from the BNC connector to the barrel of the earplug connector.

Russell

In the Files section of this group, there is a file entitled
"Volume Mod.doc
Earphone Jack Volume Mod"

The text and photo should answer your question. It is always a good idea to check the Archives (Messages) and the Files before asking a question which others may have answered already.

These radios were not designed to receive broadcast FM radio, or to fry eggs. Therefore, the mods to accomplish each task are approximately the same:
1. To receive FM broadcasts, buy a $4 "jogger's radio."
2. To fry an egg, buy a $4 frying pan.

FWIW dept:

It may have already been mentioned, but Rat-Shack is clearing out the 20-0044 outside 30M -1G antenna with the 50" coax, etc. for $0.79 each! -- Heck - the 50' RG-58 w/connectors (one F and one BNC) is worth a lot more than that! :-))

And, a reminder: The 20-009 "lapel-speakers" that work great with our scanners are also $0.79 (or thereabouts) and the 2-Meter/CB/Family-Radio 19-316 VOX Headsets/boom mike (not for my Kenwood 2-meter rig, I am sad to report) for Yaesu, Alinco, Radioshack, etc. were down to $2.97 each!

Wonder what ELSE will bottom out? :-))

They most likely will need to do a "region" search for them, although I found them locally at Merritt Island stores.

I have all three magnet & both window mounts. the magnet mounts are great the magnet holds great at freeway speeds but watch out for low tree branches will knock it off. the suckion cup window mount is also great but leaves marks when it falls off or you take it off it allows you to use the stock antenna in side your car or house the window mount that gose on your side window is ok if you leave your window closed good signal &t allows you to use any bnc antenna

shaun

ham radio talks about it
cb radio skips it
scanner radio picks it up

I use a Mag mount on one of my cars and a window mount on my Pontiac Transport (no body metal) I find both work great when the antenna is tuned to what you want to listen to.

Eduardo, I already have one case but would like at least one more, maybe two.

Can you ship two for the same price as shipping one?

Thanks,

Kelly

7340. Re: [PRO-93_95] Digest Number 693

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-03 22:07:39 UTC
From: Glen Gentile
Topic: 7340 Message: 7340

Hi! My name is Glenn and I'm from Chicago, Illinois. I've been into trains for a long time and grew up around trains. From my early years growing up around the early BN (I remember the early merger paint schemes and the U25-B and U28C's to SD-45's and those fast Zephurs w/ the E-8A's and E-9A's flying past at 60mph-in city limits) the Chicago Transit Authority's Douglas-Milwaukee line (now the Blue Line) ran right behind my old apt building. Then in 1973, my parents moved us to the south side in Chicago in the West Auburn neighborhood. The Penn Central's Panhandle line was one block away, and almost paralleling that line was the Rock Islands suburban commuter line goin to Morgan Park and all suburban stops to Blue Island and Joliet, Illinois. I remember seeing the PC's regular arrival of Geeps; GP-40, 40-2, 38, 38-2's and some SD-40 and SD-40-2 (on heavy trains only), The Alcos---I seen them all, dragging merchandise frieght trains, the C-630 and C-636's, they just shook the ground
like an earthquake. The PC had very very bad track. The RI had worse, I'm suprised that they didnt have a derailment. Conrail came into existance and in 1980, the Panhandle line was gone forever. Luckily, I did get to see the CR clean up train (which had every motive power in the consist including the F units and E-unit which I had never seen before in CR paint until that day! I do know that it was a 160 car train w/ locomotives spread thruout the train. There was 18 cabooses in that train (from NYC and Pennsy heritage). The Very last train was the Indiana Harbor Belt with 2 SW-1200 and 6 cars--mainly gondolas. It came back going south with 18 cars and a old ex Pennsy transfer caboose bobbing back and forth on the end. Later on in years, I purchased a camera--my first real camera (Canon AE-1 Program) and a Konica AutoReflex--which was given to me. I had it repaired and began using it---experimenting and honing my photography skills. Another 4 years later, I purchased a Radio Shack
100 channel scanner and began to learn every thing on it. I gave that to my ex girlfriend which she liked it to listen to the police districts in Chicago. Later on , I purchased a 300 channel base scanner from Radio Shack. I still didnt learn all the controls on that scanner--a bad relationship and my scanner (maybe still there---I dont know) I will see when I come there (w/ the police) (never can tell when the other party is on drugs). Now, I'm back into the railfan/photography scene with my Pro-95 scanner---i'm still learning this thing, I'm programing railroads from other midwestern states into it now. The trunk tracking thing, well, I'm still learning---but loving it every second. I've been listening to the CN-IC and the CSX on regular basis and sometimes I listen in to the IHB and the EJ&E. What freqs does those older model cordless phones be on? I used to have it on my 300 channel scanner.

Have pro-94 and pro-95. Anyone know where to find the new talkgroup
assignments for Lee county,Fort Myers area on the S/w gulf coast
of Fla. I can provide the 12 new freq's to anyone who needs them.
I can't find many scanner pages that have been updated
in the last 2 years. Any suggestions. thanx , gizmo / Fla.

Topic: 7342 Message: 7343

In the files section you will find all of the talk groups for Lee county, which I just uploaded. Sorry but I only listen to Fire channels. You will also find the talk groups for Orlando, Osceolla,Charlotte and some from my vacation in New Hampshire. These are Win95 files , so if you are not useing Win95 you can go to
http://www.trunkedradio.net and you can find all the talk groups at that site including police talk groups. You will have to start an account to use the Trunkradio.net data bases , but it is free and a great site.

If all else fails , you can e-mail me direct and I will send you the talk groups you need

7344. Question about using the Pro-95 in Fairfax County Virginia

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-04 02:08:14 UTC
From: Mauck, Clifford L.
Topic: 7344 Message: 7344

I live in Fairfax Virginia where the police and fire use a trunked system. I think they use a hybrid digital and analog Motorola system. Is there anyone on this list that is familiar with the system in use here? Is it possible to program the Pro-95 to receive police and fire on this system?

Thanks,

Cliff

7350. RE: [PRO-93_95] Question about using the Pro-95 in Fairfax County Virginia

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-04 17:52:29 UTC
From: Russell Adams
Topic: 7344 Message: 7350

Fairfax is Motorola ASTRO 3600 Digital, check out
http://www.trunkedradio.net/modules.php?name=TRSDB
<http://www.trunkedradio.net/modules.php?name=TRSDB&sid=182> &sid=182 for
complete system details and talkgroups.

You may need to create an account, but that info is not used or sold.

Russell

Subject: [PRO-93_95] Question about using the Pro-95 in Fairfax County
Virginia

I live in Fairfax Virginia where the police and fire use a trunked system.
I think they use a hybrid digital and analog Motorola system. Is there
anyone on this list that is familiar with the system in use here? Is it
possible to program the Pro-95 to receive police and fire on this system?

Thanks,

Cliff

From: William Calef
Topic: 7342 Message: 7351

You will need to use the frequency list for the " New " Lee County System. Lee County Florida has stopped using the old system. The new system is great and all units can be heard anywhere in the county including mobiles and handhelds. Enjoy Bill Calef

Eduardo,

Please repost the case info, cost, how you get paid, etc. I would like
to a hold of one, too.

Thanks,
Russell

After 12 days that no one order a cases, I decided to close the production
of the cases. But after the email that I send yesterday I received some
orders so I am planning to produce another batch of cases. I will cover all
the orders.

From: Dave
Topic: 4431 Message: 7355

If anyone is going to the last day of the Oshkosh airshow, they have cases that fit the 92, 93, and the 95's for under 8 bucks... Very nice fit... Some leather and some neoprene (divers suit material)... They are in the general sky market area on the northeast side of the show...

Your PRO-93 is NOT capable of decoding ANY digital transmission...
you WILL need to use a PRO-96 or one of the Uniden Bearcat digital
Capable scanners.

From: fmon1
Topic: 7377 Message: 7379

These are conventional, FM frequencies. Do not use the right side of the Win95 program.
In the Name block near top center, type in Athens Med, this tag will be displayed on line 4 for all frequencies.

These tags will all be displayed on line 3, with the associated frequency on line 2.
In the block to the left of 155.3850, type in Athens EMS.
In the block to the left of 155.4000, type in StMary's EMS.
In the block to the left of 155.4450, Type in Ath Hospital.
In the block to the left of 453.0000, type in Ath Hospital.

Each name must be no more than 12 characters including the spaces.
Note: StMary's EMS = 12 characters.

If you mean turn off a bank, simply press the bank number you wish to turn off. Observe that the number disappears from the top line of the display. Only those bank numbers visible are scanned.

If you mean turn off a scan list (ID Sub Bank) refer to page 65 in the manual.

7383. Trunking questions

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-13 02:11:00 UTC
From: Robert J Casey
Topic: 7383 Message: 7383

I have a Pro-95. Is it possible to put trunked systems in the same bank? They would both be Motorola type II. If so, is it necessary or advisable to separate them by a few channels?

Is EDACS necessarily digital? Can it be both digital and analog? The county where I live has an EDACS trunking system. I know that at least the fire department is digital. I have been able to program the trunking channels in and can hear some transmissions as static (I assume the digital ones) but some I can understand (usually a public works type of conversation). If they are using both digital and non-digital, is there any way to filter out the digital transmissions?

Thanks,
Robert Casey

Topic: 7383 Message: 7385

Question 1. Yes you may use one bank for multi Mot systems. The scanner will only track the system of the first found control until you either move the scanner out of range; lock it out; or manually select another control, then press scan. It is not necessary to separate the systems.

Question 2. EDACS regular digital can be tracked with a digital scanner. To bypass the digital portion, program all ID's, lock out the digital ID's only then scan in the closed mode.

However, Robert, if you do put two MOT systems in the same bank, you can NOT scan them both simultaneously. You'll have to choose one or the other (or let the radio choose for you). If you want "the other", you will have to lock out the control channel of the first so the radio can move to the second system.

If you do want to hear both simultaneously (adjoining towns, possibly), put them into different banks and scan both banks together.

Toby

7387. PRO-95 trunking HELP.

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-13 05:36:10 UTC
From: Bill Shulad
Topic: 7387 Message: 7387

Hello, I just got a PRO-95 trunking scanner. I just programed all the freqs. and the trunking ID's. However, when the scanner scans it seems to not pick up all the radio transmissions. When it is scanning I can press the PGM button and almost everytime I press it, the same freq. shows on the screen which is a noisy control freq. I think the scanner may be getting stuck on one of these control channels and preventing it from picking up signals from other freqs. Or am I doing something else wrong? Thanks.

1. Read the manual, PLEASE
2. Use the SCAN button, NOT the program button.
3. Only program in the control channels for a MOT system
4. For an EDACS system skip channel 00 and start programming with channel 1
5. NEVER press the PGM button unless you want to program a frequency in a channel.

Please provide us with a little more information.. What type of
trunk system are you trying to listen to??? The radio should stop on
this active channel if you are just going into program mode...
Normal...

I have found that here in Ccentral Florida that we have at least 5 agencies that use Motorola so instead of filling 5 seperate blocks with 5 seperate systems, I loaded only the control channels, then selected the IDs I wanted to listen to from each agency. I let the 95 scan as it wants and manually lock on to the ones I want to hear.

I have two Motorola systems in the same bank and don't have any problems. I hear traffic from both systems without having to lockout control channels. The only issue would be if the systems have overlapping TG ids you might have to decide how you want to handle those.

Subject: [PRO-93_95] Trunking questions

I have a Pro-95. Is it possible to put trunked systems in the same bank? They would both be Motorola type II. If so, is it necessary or advisable to separate them by a few channels?

Is EDACS necessarily digital? Can it be both digital and analog? The county where I live has an EDACS trunking system. I know that at least the fire department is digital. I have been able to program the trunking channels in and can hear some transmissions as static (I assume the digital ones) but some I can understand (usually a public works type of conversation). If they are using both digital and non-digital, is there any way to filter out the digital transmissions?

Thanks,
Robert Casey

I wonder why it works as you say it does. The radio is supposed to lock onto the first control channel that it finds, and will track that system. I would wonder what's causing the radio to lose one control channel and move to the next one in order to track the other system. It isn't supposed to do that, it's supposed to remain on the first control channel that it finds in each trunked bank.

Ken

I would guess that it searches for other control channels at the same time
it is searching for conventional channels. Maybe it stays on a single
control channel until there is 2 seconds without any audio on that system.
In my case I have the bank closed and don't have a lot of talkgroups
enabled. If you had it in open mode with a lot of traffic you may never get
to the point of having a 2 second pause to start scanning the other system.

I didn't see anything in the manual that precludes putting two Motorola
systems in the same bank and having it work. The manual does say that you
can't have Motorola and EDACS in the same bank and that you can't have two
EDACS systems in the same bank but nothing about two Motorola systems.

From: nokedawg@cox.net
Topic: 7396 Message: 7396

I noticed that when I just put in a trunked system, and i put in some text labels for this trunked system, when i turn my scanner on, it defaults to showing me the IDs instead of the text tags. Is there a reason behind this? Or a way to keep it from doing that?

Chris

From: fmon1
Topic: 7383 Message: 7398

I have five Mot systems in my area, each with a repeater within ten miles of my scanner. Using Win95, I made a file with the current control of each and typed their tag and control freq in bank one--channels 00 through 04. I then typed an ID's of each of the 5 dispatchers into sublist 0.

This file was sent to my Pro-95. I rechecked each of the five controls and each came in loud and clear. Pressing FUNC 5 closed the bank.

I turned the radio off then back on, the first dispatcher ID listed worked and worked and worked and worked. This was the first control listed also. It continued to work with up to 30 seconds of no comm at times.

I then pressed MANUAL then pressed it again, this gave me a second control. Now this system worked and worked and worked and worked until pressing manual twice again, giving me the third control. etc....

Finally, while a system was working, I disconnected and reconnected the antenna. This also changed the control until doing it again, etc...

All in all, this seams to be a waist of good scanner use. It's much easier to select/deselect banks than to attempt to manage these five systems in one bank, also each have 4 other frequencies rotating each day. And then, what about all of those ID's???

Frank

Here's my response to similar question(s) raised on or prior to 2/21/02:

Multiple Motorola Type II systems in one channel bank can be done. You could even put in systems that are close by if you lock out the control channel(s) of the system(s) that you don't want to scan. Multiple or mixing Motorola Type I systems could also be done, but you would have to change the fleetmap for the system that you want to listen to and also lock out control channel(s) if the TRSs are within range of each other. One thing to consider would be your scan list management since the systems would have different talkgroups. If you don't have too many talkgroups per TRS that you're scanning, you could segregate the talkgroups into their own scan list id banks and toggle them on and off depending on which system you are listening to. This is assuming that you're scanning in closed mode.

You can't have more than one EDACS system in a channel bank due to frequencies having to be programmed in LCN order starting at channel 01 of the channel bank.

You can always add conventional frequencies after the EDACS system or after Motorola systems.

You could mix EDACS and Motorola in a bank if you program the EDACS system in first in LCN order, then the Motorola system, and then change the bank mode to EDACS or Motorola (and set the fleetmap if a Type I TRS) depending on which TRS you are scanning. Then you would have to deal with talkgroups in your scan lists using AFS, decimal, or hex, and segregation. This is assuming that you're scanning in closed mode.

Well James, I was reading all these posts and agreeing that you must be crazy, that it shouldn't work the way you describe, but when you mentioned that when a trunk talk group stops talking it then scans the conventional channels, the light went on!
So in a bank with a busy Motorola Type II system and about 15 conventional freqs. I added the 4 control channels from another busy Mot. Type II system after the conventional freqs. (but it shouldn't matter where you put the control freqs.)
I monitor just a few TGs in both systems, so I just added the few TGs from the second system in an empty sub bank.
It works like a charm.
So you're not crazy after all. :)

Yes, it does have to start with channel 01 on a bank. I did try
starting /w channel 00; it didn't work.

There is a note on page 27 of the owner's manual (right side of the
page) that states the channel 01 requiement along with lcn for EDACS
scanning to work correctly.

The only requirement is that you enter the system's frequencies
according to their Logical Channel Numbers (LCN). By definition,
you cannot use the scanner's channel 00, as there is no LCN 00.

Assuming the frequencies used by the system are assigned Logical
Channel Numbers 1, 2, 3, 5, and 8, you'd enter those frequencies
in the scanner's channels 01, 02, 03, 05, and 08.

Topic: 7406 Message: 7406

My state(LA) uses a motorola type II Smartzone system onr night I heard some traffic on a talkgroup that a later looked up and found to be the dispatch F1 in another troop on another control about 100 miles away (Bossier City) is it posible that they dispatch on that for the whole state a night? thanks

7407. RE: [PRO-93_95] Dispatch

This usually means that trooper using that talkgroup was close enough to your area for his radio to "affiliate" (register) with the site (zone) you monitor. In a SmartZone system, only talk groups that have radios actively affiliated with the site in your zone will actually key up the repeater at the site you are monitoring. So, in short, a trooper from the Bossier City troop was in your area, had his radio on Bossier City Dispatch and was able to monitor his dispatch and talk to his dispatcher directly. That's what makes it a "Smart" zone system. Pretty cool. There's no sense in broadcasting a signal when nobody is listening to that channel. Kind of kills the scanners, but works great for transceivers. At least you know "someone" from Bossier City was in your area.

Not necessarily true. Yes in some "Smartnets" the radio affiliation is the heart of the system. BUT here in central Florida It's a different matter and there is a problem that shows being affiliated or in this cans not being affiliate can cause a talkovers.

Seminole County in 2001 converted from Motorola Type IIi system to Type II and used similar IDs to those used in the Orlando/Orange County Smartnet System. Seminole County for those of you not familiar with Central Florida is the next county north from Orange County. (We are a metropolis that now spans 5 counties; Osceola, Orange, Seminole, Lake and Polk.) Anyway when Seminole County converted their system to Type II, the conversion of the ID's showed too many similarities for either agencies well being. Not all were converted and changed as you we see.

Case in point: ID 4496 for Orange County is Health Central Hospital. BUT in Seminole County, ID 4496 is Longwood Police Department Dispatch. Now since I'm one of those that loads Control Channels into one bank of my scanner in order to track all the Fire & Rescue and Medical Dispatchers I will hear Health Central if I'm near a tower in Orange County and if I'm in Seminole County I get Longwood Police Department, not Longwood Fire Department. I created my problem when I loaded all the ID's in the same Bank for Orange, Orlando, Seminole's Fire & Rescue and Medical Dispatchers.

What it boils down to is that at this time right now Seminole County IS NOT a part of Orlando/Orange County Smartnet. When they do become a part later this year there will have to be some changes made. But meanwhile I will continue to hear two different agencies using the same ID, sometimes at the same time over the top of each other.

And Yes these two entities are aware of each other but distance between two has been very kind to them. At a distance of almost 25 miles it is rare that an Ambulance traveling to Health Central will lock into Longwood Police Department dispatch.

I have also had the control channel loaded for Central Florida with the ID's and have been traveling thru NW Georiga and western North Carolina and have had the City of Asheville trip broadcast over one of the ID's as well as the city of Knowville Tenn.

Our Pro-95 is good but it's not intelligent, so it will pick up any broadcast on a specific frequency or ID you've set the scanner to receive no matter where you are at that time.

"Can't open" doesn't mean "can't find".

"Can't open" most likely is the result of some other software "owning" the COM port. The usual suspects include PDA syncing software (e.g. Palm HotSync).

Do you have any other programs that use com port 1 if so make sure they are not using your com port.
I had this problem on my laptop and found out it was my software for my digital camera even though it was not running it still affected my com port I had to uninstall the camera software completely before my Win95 worked.
Good luck

Sometimes, other programs may use COM 1 (or whatever COM port) and may "hold on" to the port, even after the program is closed. Try turning off all other programs that might be using COM 1 and then re-booting the computer.

Your Mot Smartnet requires each ID to be a multiple of 16. Ie, 57680
is while 57682 is not.
Frequencies will convert to 5 decimal places.
Alpha tags must be no more then 12 characters.

Frank

I just got my Cable from
http://www.pro95.com/

I must say I am EXTREMELY happy with the service and the cable itself... I ordered it on Sunday Evening, paid with PayPal and received it Wednesday.

The cable works flawlessly, and is very well built, with moulded connecters, and a gold plated minijack for the scanner.

I highly recommend this vendor!

BTW, I am using Mr. Starr's WIN95 on WinXP, Running in VirtualPC on Mac OS 10.2.6 on a PowerBook G4/12" with a Belkin Serial to USB converter.

If you are using Win93 to program, go to the "Settings" tab (first tab) and UN-check the "ID Sub-bank On/Off Mode" box.

To do it manually:

1. Press FUNC while the scanner is stopped on a voice channel transmission.

2. Press TRUNK. The display indicates which sub-bank is turned on or off, and the active sub-bank number flashes.

Topic: 7423 Message: 7423

I recently bought a Dell Axim pocket pc and installed microsoft's active sync software. This caused the conflict between com1 and win95 finding com1. I unplugged the usb cable to the Axim and hit ctrl+alt+del in windowsxp and stopped the wscesom.exe(i think thats what its called)program in the windows task mangager "process" window. That solved the problem.
Thanks Don Starr, you were correct, but this wasn't a palm but a pocket pc, still it has sync software just like the palm and this messes with com port1 for some reason.

Almost... Win95 didn't have any problem _finding_ COM1.
The problem was when it tried to actually _use_ COM1.

> this messes with com port1 for some reason.

It's a very good reason: when you want to sync your PDA,
you typically put it in a cradle and press a button. If
the sync software doesn't have the COM port open, it won't
be able to "know" that you want to do the sync.

Windows allows only one program to open a COM port at a
time (otherwise, they'd conflict with each other). Since
the sync software has the port open, Windows doesn't allow
Win95 to open it.

From: junior17172003
Topic: 7426 Message: 7426

Hi,

I too, am having the same problem as mentioned before. The display T IDbk01234 appears on Trunk transmissions, and hitting FUNC then Trunk changes it to the Tag I tried to apply, and it remedies it, but the T ID bk01234 reappears whenever I turn the scanner back on. How can I get this to appear with only the Tag I have applied, and NOT T ID bk01234? Thanks for any help.

Also, I am programming my PRO93 Manually, no software.

Hmmm....

I used:
wavelength = c / frequency
= 299792548 m/s / 868525000 Hz
= .34517 m
1/4 wave = 86.29 mm = 3.397"

> Okay, I use 2808 / <freq in MHz> = inches for a quarter wave.

It should be about 2950, not 2808.

c = 299,792,548 meters per second (in a vacuum)
= 299,702,547 meters per second (in air)
(my previous calculation used the speed in a vacuum. I've modified
it below to use the speed in air).

speed of light in air = 11,799,312,874 inches per second.

Dividing by 4,000,000 (so that you can use MHz and get the
length of a quarter wave), the quoted formula above becomes:

2949.8 / <freq in MHz> = 1/4 wavelength (inches)

For a frequency of 868.525 MHz, this yields 3.396 inches.

7436. 24/7 Fire Dispatch Live Audio Feeds

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-24 12:46:31 UTC
From: Peter Kirk
Topic: 7436 Message: 7436

Attention List Members:

Fire Dispatch Live Audio Feeds

As we all know, there has never really been an organized effort to get scanner feeds on the net, and make them easily accessible from a central location. That's all about to change. A new service will be coming online in the next couple of months that will host live fire scanners from all over the country, and possibly worldwide.

The service that will host these feeds has created a professional web site that will make all the feeds easily accessible, and has purchased a brand new, dedicated audio server that will host nothing but live scanner feeds. I have been asked to put together a list of people who may be interested in hosting a scanner for their area.

These requirements are a MUST to host a scanner, they are as follows:

- PC w/ 1 GHz processor (or higher)

- 256 M RAM (or higher)

- Sound card

- Dedicated scanner (one that will be used exclusively for the feed)

- Broadband Internet connection (cable or DSL, T-1, T-3, T-4)

We are mainly looking to cover larger cities initially (New York, Philadelphia, Los Angeles, Chicago, etc.), and will expand from there. In order to qualify, you would have to be able to stream your feed 24/7. Also keep in mind that these feeds will host fire frequencies only, so you would have to have a scanner that would be dedicated to just the fire frequencies/talkgroups in your area.

If you are interested, please reply to me (off-list ☐ pkirk@...) with the following info:

- Computer specs

- Internet connection type

- Type of scanner you will use

- Cities, areas and fire agencies you would be able to cover

- Contact phone number -required-

There are a number of benefits that feed providers will be entitled to,
which we will discuss if you are selected as a provider.

Once again, if you meet the requirements listed above and would like to be a
part of this great new program, please contact me off the list.

Thanks for your time,

Peter

3 1/4 inch is the 1/4 wave length which I have on one car using the
2067 radio. The other car has a half wave antenna using another 2067.
Both work fine, the 1/2 wave seems to work better on V/Uhf 400 of course.

So my 800MHz iMac isn't good enough to feed to your site, even though I've fed Noble County, Indiana for 2 years or better? My old 233MHz iMac with only 160 Meg of RAM that I also broadcast with isn't good enough? Specs mean nothing as long as the feed goes out.

What's it matter what my specs are or what type of Broadband Internet connection I have, or what type of scanner I'd use? If the feed gets put out there, that's all that matters...

Just my two cents...

My 2950 is based on the speed of light in a vacuum (or air, since it's not enough to make a difference here).

I presume we need the speed of light in the antenna medium, which will vary with: medium composition, medium dimensions, wavelength, etc.

Is that where all of these other (2808, 2834, etc.) numbers come from?

7441. Antenna Length

Yahoo group: PRO-93_95 (2003)

Topic: 7428 Message: 7441

To calculate the length of an anyenna for any frequecy you can use this formula.
468 divided by the frequency in megahertz will give you the length of a half wave antenna in feet. From there you can just divide or multiply to get the length you want. IE 468/868=.5391 feet = 6.470 inches for a half wave antenna. Or 6.470/2 = 3.235 inches for a 1/4 wave antenna.
Have fun,

Bob

Why bother w/ all this calculation. Look at P92 or 2-2067 at
bncantenna dot com Usually 1/4wave want get the job done at 800MHz.
Not enough capture area. You need GAIN for good 800 trunking.

Actually, the 468 and 2808 numbers come from the Radio Amateur's Handbook.
I'm not sure why the numbers are slightly different, but they are all close
enough for what we're doing. Of course, the higher the frequency the more
accurate the calculation should be.

Don, and all,

It's called "end effect".

The resonant length of 1/4 wave antenna is about 5% less than the freespace 1/4 wavelength. The exact percentage depends upon the diameter of the antenna wire, and the exact shape of the end of the wire. It has to do with the way the fields bend around the end of the antenna and the effects of having to meet all the boundary conditions at the end of the antenna.

For comparison, the physical length of a resonant 3/4 wave antenna is very close to the length of a 1/4 wave antenna plus a free space 1/2 wavelength. The fields on the first 1/2 wavelength of a 3/4 wave antenna are essentially perpendicular to the antenna wire. At the end of the antenna, they still have to bend around the antenna wire.

From: Ralph
Topic: 7445 Message: 7445

I have been wanting to build an scanner antenna for home.
The most common wave lengths I hear about is 1/4, 1/2, 5/8, and full
wave.
Theese are questions that I've came up with. Can any one help?

What is the big deal about 1/4 wave?
Would a full wave be better?
Would any Length work and call it something like 3/16wave or 7/9wave?
Would any length antenna then work on four different freq's?

Thanks Ralph

Receiving signals is way easier than transmitting them, so most antenna creation places are devoted to the transmission of signals, because if you attach your radio to a chainlink fence and transmit you will ruin the radio, but if you receive with it, it might sound a little more scratchy than it should but nothing will explode. So, my advice is also based on transmitting, and once you get an antenna tuned to transmit on a frequency, it is going to receive well there too.

1/4 wave is the smallest size that you can effectivly transmit and receive with, as long as you also have a 1/4 wave groundplane. Vehicles normally will use 1/4 wave antennas because the body of the car acts as the ground plane, and that is all you need to create a wave. 1/2 wave antennas properly made are just two sections of 1/4 wave antennas, one the "hot" piece and one that is the ground plane. 1/2 wave antennas without a ground plane, or 1/2 wave of "hot" with a groundplane, are not proper antennas, but do work. 5/8 wave antennas have gain to the frequency they are tuned but a lower bandwidth, and yes, they also require a groundplane. With the higher frequencies (450mhz and up) the antenna sizes drop to very small, so some will use a 5/8 to get the gain, but then the antenna is less resonant to frequencies near by. As gain goes up bandwidth goes down, energy is not free.

The issue with the handheld radios, both receive and transmitting types, is they rarely have a proper groundplane. The chassis of the radio acts partly as one, but not enough. Sometimes working far out in the wilderness (I am with Search & Rescue) I will hang a 1/4 wave (of 156mhz) wire down from the grounded part of the BNC plug to create a proper groundplane for the antenna, and then the wave is better created (and received) and my radio works better than anyone else out there.

But, I am also not near the antenna expert I would like, these are just the basic antenna ideas I understand.

Nick, KG6NMP

Everything depends on the application. 5/8 is popular for Ham 2m mobiles. I built antennas for 10 years. Waisted 10 years. Now sell antennas that work. The commerical made ones will keep you out of the mental hospital. It's not worth the trouble. If you have nothing else to do - then maybe.

7450. Looking for a scanner

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-26 02:42:53 UTC
From: Phil Parks
Topic: 7450 Message: 7450

I am looking to purchase a PRO-2067. I missed the sales or there where none left. If anyone has upgraded and needs to get rid this one, please contact me off list. If you know of a store that has one and will ship, PLMK.

Phil

What do you sell? Do you have a web site? I'm looking for a low priced 155 MHz Yagi, say 5 to 7 (or more) elements.

Thanks,
Russell

3.24 inches for a 1/4 wave antenna.
This is a link for conversion.

My pro -95 is doing the same thing.
There is nothing in the manual that says how to change it back to showing bank/channel and alphanumeric tags permanently. My question is: How do you make that change and how I change it in the first place?
I'm very close to re initiallizing the unit.

If you are using Win93 to program, go to the "Settings" tab (first tab) and UN-check the "ID Sub-bank On/Off Mode" box.

To do it manually:

1. Press FUNC while the scanner is stopped on a voice channel transmission.

2. Press TRUNK. The display indicates which sub-bank is turned on or off, and the active sub-bank number flashes.

Try turning it off in different modes. I have had similar problems, but managed to get it back they way I liked. I think I turned it off while it was scanning in trunked mode with the display the way I liked it. If you have the Win95 software, that is the sure-fire way to fix it.

7457. T IDBk 12345 ☐ the fix

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-27 13:38:44 UTC
From: georjaboi
Topic: 7457 Message: 7457

Question:
"Instead of getting a first row of alpha text I am getting a message that say's T IDbk 12345".

Answer:
Press the "FUNC" button and then the "Trunk" button and it will go back to displaying your alpha tags

Question:
My scanner is now displaying the Talkgroups (TG's) by numeric (#) text tag and not by alpha text tag on the fourth line.

Answer:
While it's stopped on an active Trunking TG with audio, press the "Text" button and it should toggle back to whatever alpha text tag you programmed in for the group/units using the TG's. All of them should display correctly (alpha text) when you do this. Press it again to go back to displaying the TG ID numerics

7458. Re: re:: [PRO-93_95] Pro-93 T IDbk 01234

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-27 13:52:14 UTC
From: fmon1
Topic: 7453 Message: 7458

Raymond is correct, this feature is used to provide a method for
turning off/on trunk scan lists(default is on). T=Trunk, IDbk=ID bank
and 01234=the 5 scanlist.

While the scanner is stopped, pressing FUNC TRUNK will display this
subject on line 3, the prompt will be flashing under the scanlist in
use, providing the opportunity to deselect/select that list by
pressing the corresponding number. To return to normal scanning,
press FUNC TRUNK again or turn the radio off and back on again.

Pressing MANUAL then FUNC TRUNK will allow for programming/editing the
scan lists. One must press MANUAL again to return to normal.

Frank

7459. RE: re:: [PRO-93_95] Pro-93 T IDbk 01234

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-27 14:31:38 UTC
From: Don Starr
Topic: 7453 Message: 7459

> T=Trunk, IDbk=ID bank and 01234=the 5 scanlist.

We probably shouldn't call them "scanlists":
1. The scanner's docs refer to them as "ID sub-banks".
2. They're never "scanned", in the sense that frequencies
are scanned. When receiving a trunked transmission in
closed mode, the radio merely checks to see if the
transmission's talk group ID:
a. has been entered into an active ID sub-bank in
the current bank and
b. is not locked out.

7460. Gizmos 800MHz noise&popping fixed by Motorola @Txmitter site finally !

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-27 19:57:54 UTC
From: Nathan Young
Topic: 7460 Message: 7460

Just moved to Lee Co.Fla.(Ft.Myers), finally after 4-months of popping & static on my Pro-94 and Pro-95 scanners , heard the police dispatcher saying to several cars for two days that Motorola was there working on the radio system . (lightning strike related-evidently months ago) After that the popping & static has gone away mostly. The new(25 day old) Pro-95 receives quite well, but the Pro-94 still has a lot of noise. The 95 must have better circuitry to cancel out noise. I'm just glad to find out the radios or my location was not the problem -and now I can listen again with minimal interferance. Still I'm puzzled why the 95 receives better laying horizontal on it's back than sitting uprite. Also moving it a few feet one way or the other affects reception tremendously even w/ an 800MHz antenna on it.

However..... my thanks to all who replied trying to lessen my hair loss over the matter......thanx.....gizmo .

I found most intermod and noise in UHF on the 94. Use a "stubby" VHF duck.
appx 3". and that will help LOTS.

Reply says "stubby" VHF. This will cut down on UHF signal level and help with intermod and noise. Also fixes SC-150 intermod. Depends on how much RF in YOUR air.

7466. Subject: T IDBk 12345 - the fix

Yahoo group: PRO-93_95 (2003)
Date: 2003-08-28 23:07:58 UTC
From: Stephen Platt
Topic: 7466 Message: 7466

Somehow, I've managed to get the bank/channel display upon turn on. Don't know how I did it but it's a relief anyway.
When this problem developed I could change it by pressing FUNC TRUNK but like someone else said it would revert
back to IDbk after turning the '95 off and then on.

Same deal with the the TG #'s/alpha tags. I can switch to alpha tag by pressing the TEXT key, but would revert to TG #'s after turning the unit off. Still trying to figure out how to get the unit to show the alpha's upon power up.

It's kinda frustrating knowing this was how things were displayed when I bought the '95 when suddenly the display changes for no reason and apparently cannot be changed back short of re-initializing the scanner.

Maybe I'll get my '95 to magically show alpha tags on power up again. Anyone with an idea please reply I'll try it.

From: "georjaboi" <Grafx_Dzynr@...>
Subject: T IDBk 12345 - the fix

Question:
"Instead of getting a first row of alpha text I am getting a message that say's T IDbk 12345".

Answer:
Press the "FUNC" button and then the "Trunk" button and it will go back to displaying your alpha tags

Question:
My scanner is now displaying the Talkgroups (TG's) by numeric (#) text tag and not by alpha text tag on the fourth line.

Answer:
While it's stopped on an active Trunking TG with audio, press the "Text" button and it should toggle back to whatever alpha text tag you programmed in for the group/units using the TG's. All of them should display correctly (alpha text) when you do this.

Press it again to go back to displaying the TG ID numerics

There are blank spaces following your typed wording... If you
highlight the entire line (or hit continuously press delete from the
beginning) it will allow you to fill in the line as you need...
Remember there is a limit to what you can put on the line for
charactors as well...

From: Chris Pohlad-Thomas
Topic: 7470 Message: 7470

So everyone knows the story. You do all you can to keep anything from even scratching your scanner then one day, like today you drop it on the pavement in the parking lot at work. The only thing that happened was the battery compartment came open and the batteries came out. This is aside from the marks that are on the scanner. I turned it on and it came on just fine, but I was wondering if I shrug it off since the scanner came on just fine. The scanner had been in my arms and I had a bunch of other stuff in my arms and it slipped through. Any thoughts?

Count your blessings as long as it is still working. Remember what you paid
for your scanner, and treat it accordingly. I have only dropped a scanner
one time in 30 years of monitoring.

Ken

Topic: 7470 Message: 7473

I've dropped mine half a dozen times. I know I've been very fortunate. I didn't seem to have this problem with any of my other radios. So from an experienced dropper comes this; If you drop it, make sure it lands on a rug or a vinyl floor, try not to drop it from more then 3 or 4 feet. If the worst happens and you mange to drop it something hard like concrete, it will probably stop functioning because the batteries came out or the battery pack broke contact with the little metal tabs inside the battery compartment. This is almost always corrected by turning the unit off then back on again. Sometimes, you may have to bend the the tabs back out if you dropped it on it's head and the batteries compressed the tabs. Aside from that nasty scratch on the corner of the case, I have be very fortunate. I have never experienced any internal damage.

Make a note to yourself not to drop it again. That didn't work for me. but maybe it will work for you. Buy one of the leather cases in case you drop it again. If you do drop it, try to get your foot out so it will have something softer to land on or bounce off of. This has actually worked twice for me.

But the thing that ended up working the best: Make more than one trip from the car or put it all in a bag so you won't have to worry about dropping it. I'll probably drop mine today because of this message.

Thanks,
Russell

So everyone knows the story. You do all you can to keep anything from even scratching your scanner then one day, like today you drop it on the pavement in the parking lot at work. The only thing that happened was the battery compartment came open and the batteries came out. This is aside from the marks that are on the scanner. I turned it on and it came on just fine, but I was wondering if I shrug it off since the scanner came on just fine. The scanner had been in my arms and I had a bunch of other stuff in my arms and it slipped through. Any thoughts?

Chris

Too bad they're not built as well as the Uniden
designed PRO-94...I've probably dropped it at least 8
times, some from a good 10 feet onto concrete, and it
still works perfectly. Kind of sad physical shape,
though, but it works!

I'm actually on my 3rd PRO-93...the first one, I
returned when the display went blank, the second one,
I dropped from a countertop onto linoleum and killed
it...I'm more careful with this one...

Reminds me of the guy coming out of the package store with both arm rapped around his purchases. Something slips and crashes on the sidewalk and with a sorrowful expression, he thinks, "Lord let that be the mix".

I've dropped a Pro-92 on the deck in my garage, both survived.

>press FUNC then Trunk

The key to this is that you have to do the above key
sequence when the scanner is on a talk group with some
active communication. If you do this when the scanner says
Scanning up/down it will not change it. Also it CANNOT be
a stopped/talking on an standard frequency, it has to be an
Active trunking talk group. This key stroke toggles the
Sub bank view on and off. In this mode you can enable or
Disable the sub banks in this bank by pressing Func then 0, 1,
2, 3 or 4 to enable or disable the specific sub bank number.
Note that the same rules apply in that the scanner has to be
Stopped on an active/talking trunking talk group.

So you dropped it, and it still works?

Well, as someone whose dropped one or two radios in my lifetime, it's been my experience, that if any damage was done, it would be immediately noticeable after the fall. (cracked LCD, broken BNC connector, etc..)

It's like my high school football coach always used to say, "No autopsy, No foul!"

Count your blessings...

Does anyone with a Pro-95 , use the Max System 8HH,800 MHz antenna ?

It looks strange - Like an old antique "satalite" (sputnik) but I
continue to get stattic & popping at times on my Pro-95 and 94.
So I need somebody with this model ant. to tell me how it
performs. Does it take out the stattic ?

I want an antenna to go directly on my 95 such as this model.

Can someone gimme u review ? ..... thanx...gizmos .

This more frequently occurs from connecting and disconnecting the
antenna or cable. I have run into this on several occasions. Try
looking for a soldering iron at one o'clock in the morning on a road
trip to the folks somewhere else in Texas. Thank God for Walmart. I
typically have to go in an resolder this connection on any new hand
held. I now just automatically replace it with a much larger wire
than that thin little piece of wire from manufacturing. I have found
that the center conductor from some coax works great. I even put I
slight bend in the wire to deal with any flexing that may occur
later. I switch antennas and cables daily.

Need a review of Ant.Max 8HH/800MHz portable antenna AND OTHERS !!

Does anyone use one of these ant. that looks like the first space sattalite (sputnik) . It mounts directly to handheld scanners. Someone please give us a review so we all know if its the best one to use IF we're just monitoring 800 MHz frequencies. I personally don't need a MULTI-BAND antenna , just 800. I also can't mount an ant. outside on a pole. That would also defeat the portability of a handheld even though it might have better reception . Mostly I need to know if the Max 8HH removes the static & popping on reception .

When using the multi-band "rubber duck" supplied with the scanner :

As I walk thru my home holding the scanner - every few feet I pass thru a BAD reception zone. (even though I'm not in a fringe reception area with weak signals) And inevitably the spot rite beside our favorite chair is within one of these statticky zones.

So , I'm lookin for the best portable ant. to put on my portable scanner to receive JUST the 800MHz band......basically I guess that's what ALL us trunk-trackers who share & visit this web site need to know. I assume MOST trunkin systems are 800MHz currently......Gizmo.

I have the Max 800 antenna. Yes, it does work well. If you plan to leave
your scanner sitting on a table most of the time, it may work out. This
antenna isn't really a portable antenna, it would be difficult to wear the
scanner on your belt with this antenna attached. Why don't you try the
Radio Shack 800 MHz rubber flex antenna? I don't remember the part number
off hand, but the cost is around $15.00. They are portable rubber duck
antennas designed for the 800 MHz band. They work very well, I bought two
of them.

You want to know if these will "remove the static and popping". That
depends on a lot of different things. Either of these antennas will offer
an improvement over the stock antenna, but nobody can guarantee you will
have perfect reception. You will just have to try them for yourself.

Ken

==========
The antenna your talking about is nothing more
than a 1/4 wave ground plane in a handheld version.
While they seem to work pretty good, a 1/4 ground
plane antenna has no real gain, unless you compare
it to an isopropic source. Go to Radio Shack and
get their 800mhz. rubber duck for 14.95, they do
have 2-3 db gain and arent as ungainly looking
as the Max 800. I use one and it works great.

I realized that and only tried it when on a trunk group. Like I said, it still reverted back to displaying T IDbk after turning the unit off then on again. Somehow, as I said in a later post I managed to finally get it back to original display on the 3rd line but don't know how I did it. Still working on alphanumeric tag on the 4th line instead of TG #'s on power up.

After downloading Don's Win95 free software, I noticed 2 things :

No ability to print-out all the info on paper . (no print tab)

No help files under the help tab , says "Using Win95 F1" but its dimmed-out and can't be clicked on to open help . And pressin the "F1" key don't work either.

Is everyones copy of his software like this / or did I make a mistake on the download ? ..... thanx .....gizmos .

Haven't opened the actual program yet but you can download the help file
separately from the Win96 page

http://www.starrsoft.com/software/win96/Win96Help.chm

We really need a FAQ for this...

>
> No ability to print-out all the info on paper . (no print tab)

Save as a text file (see the options under "File -> Save As").
Load the saved file into your favorite text editor (e.g. Notepad)
and print from there.

> No help files under the help tab , says "Using Win95 F1" but its
> dimmed-out and can't be clicked on to open help . And pressin

There really isn't that much to "help" with. Win95 merely lets
you enter the same data as you can enter via the scanner's
keypad - it's just supposed to be faster and easier.

If you have specific questions about the use of Win95, feel free
to ask here.

> Is everyones copy of his software like this / or did I make a
> mistake on the download ? .... thanx .....gizmos .

No mistake. There's no "help" file included with Win92, Win93, or
Win95.

Win96, on the other hand, ...

-Don

7505. Talk group ID overwritten

Yahoo group: PRO-93_95 (2003)
Date: 2003-09-02 19:03:23 UTC
From: komodo8
Topic: 7505 Message: 7505

Whenever I turn a bank off so that it isn't scanned and then turn it back on again the first talk group ID that I save replaces the first channel (x-00) and overwrites the talk group ID that was previously there. For instance when I turn off bank 2 from scanning, then turn it back on again. I then save a talk group ID and it occupies spot 2-00 and the ID that was previously there is gone. Has this happened to anyone else? Is this a bug? Thanks.

7507. Re: Talk group ID overwritten

Yahoo group: PRO-93_95 (2003)
Date: 2003-09-03 03:29:08 UTC
From: komodo8
Topic: 7505 Message: 7507

After I come across a new ID number I hit trunk to save it. Later on I'll upload it and use the software to enter the group name. Whenever I come back to scanning a trunked bank and add more ID's manually though, it starts overwriting the first couple of ID's before it starts adding them to the end of the bank like it should. This only happens if I have turned that bank off and scanned other ones. If I leave that bank in then it just adds them to the end of the list normally.

Tac 1 = Tactical channel 1
F1 = Frequency 1

Usually not the same channel, but could be. Depends on the system.

Marty: There are several .p95 files in the Files section of the group
for Central Florida, including one dedicated to nothing but the local
amusement parks.

Disney uses 2 trunking systems, one 800 MHz MOT-II and one 900 MHz
MOT-II system, as well as a host of conventional frequencies.

Tac is usually short for 'tactical' and is a channel
dedicated for comms regarding a specific event or
purpose, where as 'F1' is usually meant as 'Frequency
1' or channel 1.

"Attenuation" in RF-land means the "decreasing" of a
radio signal. You might turn it on in a radio if the
incoming signal is "too strong" (too close to transmitter,
etc.).

Your dictionary definition of "weakened" is appropriate -
the incoming RF signal is "weakened" by circuitry and/or
software.

If you are getting an overloaded signal coming in on several channels, you can drop the intensity by attenuating your radio.. This usually drops enough to receive the proper channel without getting harmonics from a close FM transmit site or anything else close that would impair reception and bleed to other frequencies...

7523. Re: [PRO-93_95] Definition Question

Yahoo group: PRO-93_95 (2003)

Just for a "real world" example, my computer monitor spits out noise
on specific frequencies, one of them being my local Sheriff's dispatch
frequency. The noise is enough to break the squelch and stop scanning,
but if I turn on attenuate on that frequency the scanner keeps
scanning until the stronger signal of the repeater comes in. I can
still hear the monitor noise in the background, but the more powerfull
Sheriff signal comes in fine.

Hope that wasn't too awkward.

Nick

From: NC911
Topic: 7516 Message: 7524

Thanks. It makes great sense. I have a scanner close to the scanner, and sometimes it hangs on a frequency. When I move the mouse, it releases the frequency. Too bad you can't do it to a normal scanner.

Subject: Re: [PRO-93_95] Definition Question

Just for a "real world" example, my computer monitor spits out noise on specific frequencies, one of them being my local Sheriff's dispatch frequency. The noise is enough to break the squelch and stop scanning, but if I turn on attenuate on that frequency the scanner keeps scanning until the stronger signal of the repeater comes in. I can still hear the monitor noise in the background, but the more powerfull Sheriff signal comes in fine.

Hope that wasn't too awkward.

Nick

From: NC911
Topic: 7516 Message: 7525

In Win95, I want to use the same talk groups with a different set of frequencies. Is it possible to copy all the talk groups to a new page without copying the entire page. I am also having problems with Name tag above the frequencies not being able to enter any characters. Can you suggest what I am doing wrong. I think this is to name the Bank.

I won't ask anymore questions today, but will compliment Mr.. Starr on a wonderful program.

Easiest way: use the Bank Editor function under the Edit menu to copy one bank to another. In the "new" bank, select all of the channels and delete them (either with the Edit -> Delete menu item or by pressing ALT+DELETE).

> I am also having problems with Name tag above the
> frequencies not being able to enter any characters.

Make sure you delete the 12 characters that are already in the tag. It's never "blank" - if it looks blank, it contains 12 "spaces" that you must delete before you can type new text.

I never use the bank tag. Most all banks are combo's with 800 trunking and conv. I enter name for each freq including 800 freqs. SAMPLE: 800freq for SC Hwy Patrol: I type "Hwy Patrol" beside 800 freq then put name of dispatcher or service on ID tag such as Greenville, Spartanburg, Anderson, car to car, Ace Team, Raid Team, SHEP truck, so on and so on. Hope this helps. Larry

If they are Motorola, you can do it either way, but you may need to scan open mode. The problem with scanning with controls of different agencies in one bank, you may lose the system you listen to most if the control drops, causing the next to be active. It's much simpler to press a number to lockout a bank when you no longer want to scan a particular agency.

Hey everyone,

I was trying to program my Pro-95 with a cable and software I bought at Radio Shack (Catalog #: 20-048). Turns out the software doesn't support my scanner so I went online and found Win95. Looks to be a great program, but when I tried to send information from my scanner (already manually programmed) to the software it timed out. I tried to send info to the scanner and it said there was a problem communicating with the scanner. Of course I have the correct comm port selected and my scanner is on and the cable is plugged in. Scanner is in Clone mode. I can seem to figure this one out. Could someone please help me if they have had this or similar problems. Thanks

Don't. It won't work with the PRO-95.

Here is some info on cables:
http://www.starrsoft.com/freeware/win95/cables/cables.html

Just ordered the pro-96 on 9-5-03 from my local shack. It will be
delivered to my door in 7 to 10 days. I hear they have a shipment in
a warehouse in Texas. The only reason I ordered one so soon is
because Hamilton Co. Ohio where I live went to Digital the first part
of July. Seems like my pro-59 is becoming pretty useless and I only
had it since last March. BW

Thanks,

I just got off the phone with the RS where I purchased the cable. He states that they do have the one that works, but can't find it at this time. Of course they will be closed by the time I get off work today, so I will be taking The cable and Soft. back tomorrow and exchanging it for the one that does work. Thanks Everyone.

You may be disapointed when it comes I heard that the Hamilton Co. Digital TRS was p-25 phase 2 and the PRO-96 will not decode it. You may want to check the GRE PRO-96 tlk group on Yahoo.

This is from that group

Ray (and group),
I'm in complete agreement about the radio not being stellar. I know the manual states that it will only decode Phase 1, but without knowing in advance, how do you know if your P-25 system is Phase 1 or 2?
Down here in Austin, we're also Phase 2. When I first began to inquire about an upgrade, I was told not to expect anything since Austin was the only Phase 2 location. Now we know there's Phase 2 in Austin, Michigan, Minnesota, Hamilton County (Cincinnati), and Phoenix. Is this enough (I believe so) for Radio Shack to need to release an upgrade to the DSP?
After the experience that Radio Shack and GRE had with the bugs in the Pro-92, I thought they would have done better with future product releases. I guess not. As for now, I'm calling this the Microsoft scanner. Let the consumer beta test the product for us and we'll fix it if we get enough complaints.
Sorry for the ranting.

-Wes

Topic: 7541 Message: 7542

Have you already set the trunking mode to MO ?
Have you entered the correct fleet map?

Thank you,

I wasn't sure how to read the fleetmap in the manual and it just
popped into my head!

>when i program the control channel

In the above statement, do you mean channel or channels. There are 4
control channels, and they likely rotate daily. Only one is a control
at a time, the other three become voice channels when not assigned
control duties.

Try these links:

http://www.fordyce.org/scanning/frequencies/travel/outerbanks.html
http://www.co.rowan.nc.us/telcom/ScannerLists/dare.htm
http://www.co.rowan.nc.us/telcom/ScannerLists/currituc.htm
http://www.panix.com/~clay/scanning/frequencies/states/nc/duck.txt
http://dettifoss.fcc.gov/acweb/dettifoss/genmen_a/db_19/s_st_cy_sv.roi;727?ViewDefault
(I don't know if this will work for you or not, if not, go to
http://svartifoss2.fcc.gov/reports/state_county_sv.cfm and select North
Carolina, then Dare County and all).

Are you going to take the ferry to Ocracoke? It's an excellent ride, just
park the car on the deck and go up top and relax for 2 1/2 hours! We went
there 2 years ago doing the light house run. Also, lookout for the
spaceship around Salvo!

Nope and Yep. You can convert a Win93 file to Win95, or bass ackwards
with Winxx converter.

All three can be found at
http://www.starrsoft.com/

Maybe when you tried to turn off a bank you turned off a trunking ID bank.
Manually step thru freqs and ID's one at a time and look for lockouts.

From: TwolsisNAnkhs34@aol.com
Topic: 4878 Message: 7567

hi there,

a few weeks ago i got the pro 95, radio shack's ad in their flyer said that they would program it for free.

the store i purchased it from said that they didn't have the software yet and i should call them in a week.

i did and they informed me that they wouldn't be getting it since they are a small store.

i tried another store and the people there didn't even know what i was talking about.

so:
1-does it pay me to buy the software and program it myself
or should i get the pro 96 which seems to have everything built in according to the ads?

i am new to all of this.
what are the differences between the 95 & 95 other then the above?

i have been reading alot on here about some win program--what is that for and what does it do and can it be used on the 95 & 96?

thanks in advance for any and all help
helene

> does it pay me to buy the software and program it myself

There is free software available for the PRO-95 (see below)

> or should i get the pro 96 which seems to have everything
> built in according to the ads?

It doesn't have _everything_ built in. It has the 100 top
systems for some major metropolitan and other areas.

> what are the differences between the 95 & 95 other then the
> above?

The 95 has 1000 channels, the 96 has 500
The 95 has 100 talk groups per bank, the 96 has 150
The 96 will receive APCO-25 Phase I C4FM digital signals, the
95 is analog only.
The 96 will do CTCSS/DCS, the 95 will not.

> i have been reading alot on here about some win program--
> what is that for and what does it do and can it be used on
> the 95 & 96?

These are my Win9x programs for various PRO-9x scanners. Win92,
Win93, and Win95 are free. Win96 is free to use for 15 days,
then has a $30 registration fee.

These programs allow you program your scanner without touching
its keypad. If you're curious about them, you can download and
use Win95 for no charge:
http://www.starrsoft.com/freeware/win95

You'll need a cable in order to connect your PC and scanner,
though the software will run without it (so that you can play
with it, you just won't be able to do any data transfers with
the scanner). There is a link to some cable information on
the above Win95 page.

7569. Win95 settings

Yahoo group: PRO-93_95 (2003)
Date: 2003-09-13 20:28:40 UTC
From: nikitoll
Topic: 7569 Message: 7569

First time user of Win95 and I question my setup.

Prior to using uploading with Win05, I manually programmed 9 freq and no text ID's into the Pro96. Frequencies were of Maitland & Winter Park, FL, FD& PD. It worked well.

This morning, I downloaded the manually stored freq. from the scanner to Win95 and added text ID's. Then, uploaded from the computer to the scanner. Now, nothing is received in the scan mode. If I manually seek the freq, I can hear the calls and see the text ID for the specific talk group

Settings: Win95 is all MOT with no lockouts & Scan Bank 0 Is enabled.
Questions: What is the Priority channel on the settings tab? What are the settings above and to the left of the Alpha Tag section? Are these settings causing the problem and how should they be configured? Only 14 channels are programmed and 16 text ID's are programmed in bank 0. What have I done wrong?

Thanks in advance for your help.

Jason

PS If anyone in my area is familiar with WP & Maitland freq's and wolud like to explain over the phone, please send me an email with your ph# so we can talk.

You have a PRO96 and are using WIN95?

that could be your problem.

Peter

7573. Re: Win95 settings

Yahoo group: PRO-93_95 (2003)
Date: 2003-09-14 15:37:09 UTC
From: fmon1
Topic: 7569 Message: 7573

We were all confused with you original note, but now that we know you
are matching program with radio, lets look at your settings as you
have them outlined.

> Settings: Win95 is all MOT with no lockouts & Scan Bank 0 Is enabled.<
In Win95 verify that MOT is indicated in the Type pull down window,
default is Conv.

>Questions: What is the Priority channel on the settings tab?<
In the frequency window, one can select a desired frequency for
priority, though if used, select the mode and you may assign a text
label up to 12 characters.

>What are the settings above and to the left of the Alpha Tag section?<
1. Motorola UHF low requires setting with the specifics as indicated
in each of the three windows.
2. Fleet map setting are for MOT Type I or IIi mapping. Your system
is Type II, so leave them in default.
3. 0 through 4 dots are for toggling the 5 sub-bank talk group listings.

>Are these settings causing the problem and how should they be
configured?<
The only setting you need to check is indicated in my first note, MOT
Type, of course each trunking freq should be Mot also.
BTW, a quick look at trunkedradio.net list your freqs as follows:
Winter Park 866.0875 866.3375 866.6375 867.1875 868.7500
Maitland 866.2000 866.5375 868.5250 868.775
You have 5 more freqs than required. Are they conv?

Frank

Trunking is a communications method setup for many users to use limited resources and maximize efficiency. How it is done and describing each type of trunking systems would take up to much space in this forum for one posting.

The link below is a page, which you will find on the left column of icons, the varying types of systems with great descriptions of each.

http://www.trunkedradio.net/index.php

You may need to sign on but its free and a great resource.

You can copy from Excel and paste into Win95 or the otherway. Or you can copy from a text file both to and from Win95.

What are you needing to accomplish? You can convert other Win9x files also and there are gobs and gobs of files in Win93, Win92 and Win95 format available.

7582. ScanStar Explorer, computer control software on Pro-95 / work ??

Yahoo group: PRO-93_95 (2003)
Date: 2003-09-21 22:36:55 UTC
From: Nathan Young
Topic: 7582 Message: 7582

Can ScanStar Explorer, computer control software be used on Pro-95 to control scanin & trunk-trackin from the computer screen while the cable is still connected to the pro-95. The info on their website says it " SUPPORTS " the pro-95 , but very deep in the help file there is a note saying the software can program the radio but cant be used for remote opperation of the radio.

I don't really understand the the purpose of this software and the web site dont do a very good sales job of explaining the uses for it. Their software says it "supports' several scanners , but the way I read it- it is not fully functional on many of them ? appears it will program all of em - but control only ONE of them . Does anyone understand this ? What good is it ??? .... gizmos

7583. RE: [PRO-93_95] ScanStar Explorer, computer control software on Pro-95 / work ??

No software can "control" or "monitor" the PRO-95. The radio
doesn't support any such features. All that external software
(TS or my Win95) can do is upload/download an image of the
scanner's programming.

7589. Trade Modded RS DX-398 For Scanner

Yahoo group: PRO-93_95 (2003)
Date: 2003-09-27 15:52:07 UTC
From: dewayne48
Topic: 7589 Message: 7589

Here is a RS DX-398 in great condition. This radio has several improvements that have been implimented over a "stock radio". These are as follows: 1-an additional broadband rf amplifier has been added internally to boost reception with the telescopic antenna. This really helps boost weak signals. 2-Tuning mute and smooth knob tuning to eliminate the stepped tuning knob action and chugging when bandscanning with tuning knob. This makes for much better feel when tuning than on a stock radio. 3-The audio has been improved to get rid of the tinny sound normally found in a stock radio. It has good volume and punch. This one is easy to listen to for extended time. 4-The stock radio has a very weak green led backlight system for the LCD display. It makes it hard to read in dim light. The dim green leds have been change to brighter blue leds. This makes it much easier to see in dim light. Also note that when using an AC adaptor the light can be selected to stay on all the time. 5-The stock radio has a very slow AGC, this has been corrected to a fast AGC time which makes station reception on worldband much better. These modifications make an already good radio much better. This is the best portable I have owned. The audio is much better than stock. Sensitivity is excellent! I can listen to 80 meter hams easily with the whip antenna! I just don't use it much. I need a scanner. Thanks for reading!

I'm looking to trade for a mint RS Pro-95 or ?

In answer to the last part of your question concerning Maitland and
Winter Park.... You'll need to load the Orange County Control
Channels and ID's for Maitland and Winter Park. Yes, Maitland &
Winter Park have their own freqs but they are for non-LEO use.

7597. FireFeeds.Com update!

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-03 06:33:50 UTC
From: Peter Kirk
Topic: 7597 Message: 7597
Attachments: 2 described; binary payloads are missing from this source WARC

ABOUT FIREFEEDS.COM

Using state of the art streaming audio technology, FireFeeds.com gives you access to live fire scanners from all over the United States, 24 hours a day. Our live fire scanners cover some of the worlds largest and most respected fire agencies, including the New York City Fire Department (FDNY), the Boston Fire Department, Dallas Fire-Rescue and more! Whether you're a true fire buff or just like listening in on the action, FireFeeds is your best source for live fire scanners on the Internet.

We have created a professional web site that will make all the feeds easily accessible, and we have purchased a brand new, dedicated audio server that will host nothing but live scanner Fire feeds. I have been asked to put together a list of people who may be interested in hosting a scanner for their area. The requirements to host a scanner are as follows:

- PC w/ 700 MHZ processor (or higher, 1 GhZ preferred)

- 256 M RAM (or higher, 500 M RAM preferred)

- Sound card, Soundblaster Audigy series or equivalent

- Dedicated scanner (one that will be used exclusively for the Fire feed)

- Broadband Internet connection (cable or DSL)

We are mainly looking to cover larger cities initially (New York, Philadelphia, Los Angeles, Chicago, etc.), and will expand from there. In order to qualify, you would have to be able to stream your feed 24/7. Also keep in mind that these feeds will host fire frequencies only, so you would have to have a scanner that would be dedicated to just the fire frequencies/talkgroups in your area.

If you are interested, please reply to me (off-list - pkirk@...) with the following info:

- Your Name

- Computer specs

- Internet connection type

- Sound Card Make and Model

- Type of scanner you will use

- Cities, areas and fire agencies you would be able to cover

- Contact phone number

There are a number of benefits that feed providers will be entitled to, which we will discuss if you are selected as a provider.

Once again, if you meet the requirements listed above and would like to be a part of this great new website, please contact me off the list.

We hope to be online by end of November.

Thanks,

Peter Kirk

7605. problem with trunk tracking

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-15 04:43:13 UTC
From: Billy Lay
Topic: 7605 Message: 7605

can anybody tell me how to set my scanner where it dosent automatically find the frequencies for the trunk system im trying to program the san bernardino county system 1 for example when it stops on a id the frequency is 860.2625 when it supose to be 860.25 and it dosent come in very good and im not that far away from the trunk system thanks Billy Lay

7606. Re: problem with trunk tracking

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-15 13:23:49 UTC
From: fmon1
Topic: 7605 Message: 7606

Because your scanner uses 6.25 kHz steps in the 800 mHz range.
860.250 mHz is actually 860,250,000 Hz. The closest even multiplier
of 6,250 Hz equals 860,262,500 Hz. 860,250,000 does not divided
evenly by 6,250 so your scanner finds the closest Hz, which is
860.2625 mHz.

Billy,
Maybe the signal is so strong that when scanning DOWN, it stops at
the higher freq..
When no one is talking does it say SCAN UP or SCAN DOWN?
If it says SCAN DOWN, push the UP arrow, then it should say SCAN UP.
This is just a wild guess, but it is easy enough to try.
If it results in the same problem with another freq., try the
attenuator.
Dick

From: Phil Parks
Topic: 7609 Message: 7609

I am parting with my Pro-93 & 95 after purchasing my Pro-96. I have the original box and parts and will include a set of rechargeables and a two-way download cable. An AC adapter is not included.

The '93 (v1.03) is $115 and the '95 (v1.0) is $155. This price includes shipping to a stateside address.

Both scanners are in good condition.

For the nostalgics out there, I have a Uniden BC235XLT (one of the first trunktrackers) for $75 or make an offer. It does work and I have an extra battery, original box, and the charger.

Please contact me "off list" @ Phil at havanafolks.com. PayPal is preferred!

7622. GRE Program Cable.

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-18 19:49:20 UTC
From: Matthew Sauer
Topic: 7622 Message: 7622

I just got my GRE cable from Radio Shack last night. They only had one for the in-store programming offer but one of the guys there has a purple cable so they let me order one...no shipping...and have it delivered to the store so I could have the one they had in the store with me to take home. It works like a champ. I have already re-programmed a few times and am working on a really great set-up for my area. Just wish I had a 95 instead of a 93 so I could have a few extra conventional channels. I really wish I had a 96 for the extra room. I can't even look at one. The number one scanner selling store in the area can't order them...corporate zeroes them out. Oh well.

Matt

From: Don
Topic: 7626 Message: 7626

First thanks for letting me post here to the group. I am a avid scanner listener and have been for years (using some 2 RS scanners and some RS HT Scanners with the main being BC895 with ScanCat software controlled and this hobby is for sure fun fun fun! I have many other hobbies that are scanner/radio related like SWL and for sure Ham Radio and just wanted to put out the word that Ham Radio is also a very good hobby if you like scanning you might try Ham Radio and add it to your list of activities. Ham Radio has many activities that are not just for the listener but one can actually get involved with storm watch/chasing, Emergency groups, gernal world wide communication and much more....so, just a friendly invite to a group formed only a few months ago....Ham Radio Help Group....ALL are WELCOME! If you are new to Ham Radio, a current Ham wanting support on upgrading, or a Ham that would just like to help by supporting someone direct or mabye providing study material then please give Ham Radio Help Group a look over (we usually have someone giving out FREE study material every so often also). So far a great group of good diverse folks from those new to Ham Radio asking questions to get involved to current Hams upgrading or giving advice! Here are a few facts about the group thus far:

- 500 members and growing
- 4000 message posts in just a few months....very active group
- Members giving and receiving FREE study materials so check our "Polls" and posts (study materials like ARRL/Gordon West Tech, Gen, Extra books..or code study tapes etc)
- Many members getting their first Ham Tech tickets and just starting out......sharing testing times and support of members passing tests is encouraged
- Group has 4 moderators to motivate the group along and keep Spam out
- Sunday Group ChatNight and also EchoLink Net - 8pm cst (open to all so even those that are not Hams can participate one on one and ask direct questions or meet members)
- Many message posts on study help ideas, support, station building, basics, etc
- Check out our Calendar, Links, Database and Files sections also

The main purpose of the group is to support those wanting to get licensed, upgrade, or Ham willing to help with advice or pass study material along (no negative, no political posts...support only). This group is focused on promoting Ham Radio in a positive way so if this sounds like something you might be interested in please join in!

7630. Newbie/Dummie

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-20 20:59:50 UTC
From: David
Topic: 7630 Message: 7630

Hello All,

I just got a new Pro-95 and followed the instructions on page 56-58 on programming the trunk frequencies for my area. See below. After hitting Scan, I heard nothing from any of those channels. I started programming them on 000-004. I then changed the ED in the right upper corner of the display to FM and then I started getting them, but most of the time I only received the last part of the transmittion or just the beeps.
I thought the ED should be there, but it didn't appear to work. I'm sure Im doing something wrong. Can anyone help me out?

Thanks.

System: Galloway Township, New Jersey
County: Atlantic
Type: G.E. Ericsson
Use: Galloway Township Police, Fire & Atlantic County Prosecutor

Frequencies:
Logical Channel Numbering:
866.2000 (1) 867.3625 (2) 868.0750 (3) 868.5750 (4) 868.9250 (5)

For an EDACS system, the frequencies must start in channel 001 NOT 000.

You will need to start EDACS programming in logical order with channel one being the first frequency in your setup... In a normal radio, there is no channel zero... The second thing to check is that you have the bank mode to EDACS... This can be done by going manually to the first channel of your EDACS system and pressing <program> and <trunk>... The radio might say, "Not Trunked Press Mode" you should be able to set that and be ready... I made a simplified program guide in the files area of this group... Its called pro93pro95.doc and should help you alot more than the owners book...

For EDACS, you need to start in 001, not 000...there's
no channel number zero in and EDACS system...

Also, make sure that the whole bank is in EDACS mode,
as well...

Very basically the discriminator, or discriminator tap modification lets you tap into audio in your scanner at a point before it is filtered for best, full range, audio quality. The scanner takes the audio filters and then shapes it to make it more suitable for normal audio ranges so it sounds better from your scanner.

When you are using your scanner to receive data to be decoded by a computer, you need to use the cleanest audio signal possible, without audio tone ranges filtered out. If you use the headphone jack or the, external speaker jack you are not getting the whole range of audio frequencies that was received by the scanner.

To get the best audio for data decoding, you need to tap off the discriminator chip. This is the chip inside the radio that actually demodulates the data. The output of this chip is where you can get the cleanest audio with full range for data decoding.

The many digital modes active on FM today can be decoded like: SITOR, ASCII, BAUDOT, NAVTEX, SYNOP, AMTOR, Motorola Trunk Systems, GE EDACS Trunk Systems, Mobitex, ATCS and more with the proper sound card (or slicer) software.

A slicer is a device that converts the digital tones in the audio signal your scanner receives to the 0's and 1's that your computer understands. You then use software to decode that to usable (and readable) information. Today the soundcard can perform that conversion with many of the softwares available.

Here is a link to the information on the modification:

http://miked2000.home.mindspring.com/pro93mod.htm

Hope it helps

Mike

7637. Pro95 Trunking

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-22 18:10:21 UTC
From: sjchubjo
Topic: 7637 Message: 7637

I just got my Pro95 a few days ago and still can't get it to receive trunk freqencies while scanning. I can go manual and then I can hear transmissions, but it will not pick anything up in scan mode.

I called 4 Radio Shacks in my area thinking I would have them upload frequenies and see perhaps I'm programming the scanner wrong, but 3 do not have the cable or software and the 4th who had both, the hard drive on the computer they use crashed and a new hd is on order. So at the point I really dont know if it's something Im doing wrong or a defective scanner.

Im getting to the point where I just might return it and be done with it. Radio Shack is being no help. The pc cable (model 20-048) which they said works, does not and I already returned that.

Any comments/suggestions are more than welcomed.

PS-I wiped out my scanner and started clean on 001 as I now know you shouldn't use 000 for trunking. Programmed about 30 freqs and still nothing.

A little more information might be helpful in trying to get you going. What town or area are you trying to scan? What type of turnked system is it (Motorola, EDACS)? Is it a VHF or UHF system? Do you hear the control channel (and get tag ID information) when you scan in the conventional mode? Are you trying to scan in the open or closed mode? Do you have all the talk groups for the system and in your scanner? Are you trying to program the Pro-95 manually or with software? What software? Do you know the type of system (type 1 or type 2) if it is a MOT system? Do you have the fleet map information?

As for general tips, make sure you have both the individual frequencies in the trunked group AND the whole bank set up for the proper trunked mode. There are two spots (one on each frequency and one for the whole bank) that you have to tell the scanner what kind of system it is.

With EDACS systems you must start at 001 (not 000) but with MOT systems it doesn't matter. You must put the frequencies in LCN (logical Channel Number) starting at 001 for EDACS systems.

You can only scan one type (EDACS or MOT) of trunked system at a time in a bank. You can scan conventional channels in a turnked bank but you must set those for FM (or proper mode).

Depending on the system you may have to program the fleet map information. This would be needed if it is a type 1 motorola system.

These things you will need for most scanners before you can set them up. I hope this helps some

If it's EDACS, then yes, you need to start on 001, but
Motorola can be anywhere in the bank...

You also need to make sure that both the freqs and the
BANK is set to the right trunking mode...it should
perform perfectly if it's one of the supported
trunking types...

The trunk system in my area is EDACS, the freqs are: 866.2000, 867.3625, 868.0750, 868.5750 & 868.9250. Another trunked freq I programmed is 851.91250 which I heard the 'noise' and it should CTL-01 and 0225.
As for talk groups do you mean all the freqs for a particular town? If so, yes. The first five are for Galloway Township, NJ http://www.tracyyoung.tv/scannernewjersey.htm

I cant programming my scanner with software because I dont have the cable yet, it's on order. System type is: G.E. Ericsson.

Your frequencies are correct per TRS. As suggested, check that both the freqs and bank are set in EDACS, and if you do not have ID's programmed (ie 02-000 etc) make sure you are scanning in the open mode. A + should appear under the bank number for open mode. Also, the noise you hear on 851.91250 may be a control of a nearby system.

851.9125 is assigned to Egg Harbor, so you should remove that freq
from your Galloway bank.

Did you check to make sure you have the ED in both all the frequencies and the whole bank? Did you confirm that you are scanning in the open mode?

Start with a clean bank (nothing in it) and put the 5 frequencies you have into it in their proper order starting at channel 01. Once you have them entered and have each of the 5 set for EDACS (ED) manually step thought the 5 frequencies to make sure you are receiving a control channel in one of the 5.

If you are, you should hear the data and the display should give you a indication of the talk group. Something like CTL-01.

Ok, then make sure you have them (the frequencies in order listed starting with channel 01. Make sure you store the proper mode (ED) with each of these five frequencies. Then set the whole bank mode to EDACS (ED). Make sure you are in the Open Mode. Make sure you don't have the bank locked out. Put it in scan and you should be able to track the system

856.9875 (01)
857.9875 (02)
858.9875 (03)
859.9875 (04)
860.9875 (05)

If you are running in the open mode, you do not need to worry about the talk groups as you will receive everything on the system but you will not get the alpha tag information. If you want to run in the closed mode, listen to only specific talk groups you need to enter each talk group and the ID, that you want to listen to. The talk group is not other frequencies in your town but the groups set up on the one system you are listening to:

Police Camden Police (Dispatch) Channel #1 02-047
Police Camden Police (Information) Channel #2 02-050
Police Camden Police (Patrol) 02-046
Police Camden Police (Secondary) Channel #3 02-051
Police Camden Police (Secondary) Channel #4 02-052
Police Camden Police (Switchover) 02-101
Police Camden Police (Tactical units) 02-121
Police Camden Police (Vice) Encrypted 02-066
Police Camden Police (Vice Operations #1) 02-067
Police Camden Police (Vice Operations #2) 02-070

---------- Original Message -----------

The trunk system in my area is EDACS, the freqs are: 866.2000, 867.3625, 868.0750, 868.5750 & 868.9250. Another trunked freq I

programmed is 851.91250 which I heard the 'noise' and it should CTL-01 and 0225.
As for talk groups do you mean all the freqs for a particular town? If so, yes. The first five are for Galloway Township, NJ
http://www.tracyyoung.tv/scannernewjersey.htm

I cant programming my scanner with software because I dont have the cable yet, it's on order. System type is: G.E. Ericsson.

Yes, I was just going to mention, you can only have one trunked system in a bank, you can not mix different trunked systems. As I noted before you can put conventional frequencies in a trunked bank but for now just put the 5 frequencies of the trunked system in and nothing else

Mike

---------- Original Message -----------

851.9125 is assigned to Egg Harbor, so you should remove that freq from your Galloway bank.

To check this, enter the manual (non scan mode) go to the bank you have the 5 frequencies in, lets assume it is bank 2. You would press 'manual' 201 'manual'. A 'ED' should show in the upper right hand corner of the display. If not, press 'mode' until it does. Then check all 5 channels that way. Also check to make sure there is nothing in channel 00 and there is nothing else in the channels after 05. Make sure all 5 channels show the ED in the upper right hand corner.

To make sure you are in the open mode, look at your display, just to the left of the ED there should be a plus + sign, if there is you are in the open mode.

To make sure the bank is set to ED do the following. Press PGM and then TRUNK to enter the mode. Press FUNC and the up or down arrow (left of the 7 and 0 key) to move to the bank you have the frequencies in. You have to press FUNC each time before the up or down arrow. Once you get to the bank you have the 5 frequencies in you should see in the bottom left the ED. If not, press the MODE to make it read ED, then press PGM to exit.

For one thing never go to Radio Shack to ask questions (they don't know anything. for the cable fo to http://www.starrsoft.com/freeware/win95/default.asp for the cable and the program, I have no trouble programing my system for trunking systems, it is a little tricky I have done a log of research and Im still baffled but slowly Im getting it. You have come to right place there are people with a lot of knowledge on news groups (dont take the scanner back, I like mine and in time you will like yours...) Good luck...

You mentioned that I should hear the data noise on one of the 5 freqs when I manually go thru the 5 freqs, I don't. Just to be sure, I inititalized the scanner to remove all from memory, then reprogrammed the 5 freqs (001-005). All show +ED in the right top corner. But still no data noise on any of the 5 freqs. However, as I typed this, I happen to leave 001 on did hear a transmisson, but will not pick it up while scanning.

PS-my pc cable should arrive in a few days.

---> My reply to what sjchubjo wrote 10/22/2003 8:38:59 PM

Yes, you should hear the digital tones of he control channel on one of the 5 frequencies. One of two things, either you are too far from the system or there are more than 5 channels in the system (web information is many times wrong).

How far are you from the transmitter? Have you done a web search to make sure you information is correct and that it is only a 5 channel system?

You will not track unless you have the control channel and have a good signal from it.

Mike

Yes, it will work fine like that but in this case he is having trouble getting set up so just to make things simple, I want to work with just a clean bank, only having the trunked system. You are right, you can mix one trunked system and conventional channels and they will work fine.

7651. Blank display???

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-24 09:30:02 UTC
From: Andrew Koch
Topic: 7651 Message: 7651

I turned on my Pro-95 tonight and the display is BLANK.... Nothing.

The back light still works, but no information comes up on the screen.

If I turn the squelch down all the way, it opens and I get static,
but I can't tell if I'm on a valid channel or not.

Help!?

OK... Disregard my message... I hooked the scanner up to my PC and
downloaded it, and found that the display contrast had somehow gotten
set to a value somewhere above 200....

Also a bunch of other settings were wrong.

Any idea how they could have been corrupted?

Everything was fixed when I Uploaded my backup image to the scanner.

Known issue when the batteries get low... Download my Pro93Pro95.doc
file, it has the shortcut key listing to get the contrast back
without hooking to a PC...

Radio Shack has implimented a new search on the radioshack.com website... Now, and with corporate stores only, you can search locations for inventory on hand... This is for current items only and should not be used for up to the minute inventory levels... Lets say you search the site for 15-1108, a simple antenna booster for your home tv, the page will load and give ways of ordering this item... Also in that location, you can put in your zip code and see if your local store carries this item... Its pretty cool... This doesn't work with franchise stores as of yet... I would look for it to happen as time goes on... The site was getting updated throughout the day... This might help you locate items that once were thought to be gone... I am sure stores with sale items will ship to you via credit card and shipping charges over the phone... But the neat thing is that you can search from home of last known inventory levels... Its suggested to always call the store to make sure the proper quanity level has been reported to the home office...

hi
i am new to the pro 95 mot scaning.
I have some questiosn about it.
any hjts people have learned from the thing to make life easer.
on puting alpa tags for a channel like for my local police I have cody pd but it is a pain in the but doign the leters unless I am doing he wrong. I hit the number key for that leter then hit 1-4 dpeding on what spot the leter I want is. is that the hard way is there an easer way on my two way fore radio you just hit the number key for the leter and go through the leters for that key.
how do you program the trunk if you don't know they system the nearest city to me has a bad trunk system a radio gyuy that no logner works for them becus eof his stupeid mistake he saw a ericson trunk system on ebay. never mind the resion the company was selling it was it was obsialte. but he boguht it and spent over a million dollers for the hole system and blowing there budget for the enxt 15 years. but they then had to modifey the system to get it to run and no one knows what type it is. the control channel enver changees and rather then eharing a squikign sound it is silent. I tried programing it has edacs nothing tried mot 1 and 2 nope any ideas it is silent if you set as those types. if you set it up has non trunkign you can ehre but you miss the coverstiosn has the change channels. has they are talking

any one have any idea how I can usign my pro 95 prgram the folwoing trunk system you need the sytem what do you put the system has

The Billings 800 Mhz trunked system is a 3 site multi-cast E.F. Johnson LTR-NET system. And it has had its shere of problems from the software that runs it crashing to the timming of the 3 sites gong wacko. the system at times becomes very overloaded and the PD cannot get on. the lastest thing added is Mobile Data Terminals in the cars a 6th channel was added for this, it uses diversity type antennas and also has problems. The PD has stated that if they could go back to VHF they would. Monioring it is very difficult in other areas folks with Uniden BC780XLT scanners have tried and had some success. Other wise you have to listen to the 5 800 frequencies and its slow and you miss stuff.

You can't track it on the 93 or 95, only the 92. It's an LTR EF Johnson and the 93 and 95 don't track that type of system. They only track Motorolas and EDACs Ericson.

The Pro-95 will not track a LTR system. You can put the freqs in and scan manually.

You really need WIN95 software to program your 95. All you have to do is type in the information. But then that could be another problem unto itself.
Good Luck, Larry

Is it a Multi-Net system or LTR? These are two different protocols.
If it has a control channel then it would likely be a Multi-Net
system. If there is no data channel and the channels occasionally key
up for a second then it would likely be an LTR system.

The only way to monitor a Multi-Net system with a scanner is in
conventional (non-trunked) mode.

If they actually use an LTR system then you need an LTR capable
scanner such as a Pro92, Pro2067, BC-780, BC-785 or BC-250. Pro-96's
do not track LTR systems.

7665. Trunking Fleet Map Question

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-26 18:55:07 UTC
From: goodstuff762
Topic: 7665 Message: 7665

I am using the Shareware Win 95 to program my Scanner.
I am getting a little confused with the Fleet mapping.
The software is pretty straight forward with the fleet values. For example S1 - S14.

What do you use for S0? Is that the: Type II setting?
The Mass State Police use "S0" for all of the fleet map values.
I am using the Type II in the software for all of the settings right now.

Another fleet map I need has no value in the #7 slot. All that is there in the #7 slot in the fleet map legend is a --. What the hell do I use for that? There is no blank in the Win 95 software.

One more question: I believe you need the Control Frequencies for trunking in this scanner. Is it Ok to mix the control frequencies with the voice frequencies in the same bank?

Thanx

It probably means that block 6 has a size code that takes
two blocks (i.e. S12).

> One more question: I believe you need the Control
> Frequencies for trunking in this scanner. Is it Ok to
> mix the control frequencies with the voice frequencies
> in the same bank?

You could, but you don't need to enter the voice frequencies
at all. All you need are the control channel frequencies.

The best type II map to start with is P8. Widest selection of talk groups. Good for seeing whats on any business / ind system. Dont over look taging 800 freq w/ ID. Sometimes better than bank tag. On a State Police system freq tag could be State Police and ID tag could be dispatch point Doverville.

Larry,
I now receive approx. 20 different trunk ID's with the
scanner. I can change any fleet map and simply place a P8 in the
first bank and change the scanning without messing up the rest of
the map? Keep in mind you and many others have forgotten more about
scanning than I know. :)

Type II has 4096 talk groups each at 16 bits apart. P8 is pure type I
and offers 1440 talk groups.

7672. Recording Channels

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-27 15:19:06 UTC
From: sjchubjo
Topic: 7672 Message: 7672

Hello,

Does the software writen by Don Starr for the Pro-95 have the ability to record?

If not, does anyone know of any software that does? I did see www.blackbagsoftware.com does have software that records, but I dont see the Pro-95 version.

Thanks for your help.

I am assuming that you want to record off your scanner. This program is freeware and will let you record onto your hard drive. I have used it for about 2 years with no problems.

7674. PRO 95 on Sale at RS

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-28 01:38:51 UTC
From: C Gutta
Topic: 7674 Message: 7674

I know lots of people are upgrading to the PRO 96, but I just wanted to let people know. I work at RS and we have the PRO 95 on sale for $149.99 until the last week of the month. Brand new, don't buy on ebay while they are on sale. If the RS doesn't have it in stock, ask them to DIRFF it!.

the nice thing about this software is that is has an adjustable
squelch so you're not recordnig and filling up your hardrive when
there's no traffic.

7677. Fourth line of display

Yahoo group: PRO-93_95 (2003)
Date: 2003-10-29 05:05:38 UTC
From: C Gutta
Topic: 7677 Message: 7677

I have a question about the PRO-95. I am using win93 and the columbus2.p95 file from here. My question is this. How come on some of the channels it stops on on the 4th line I have a text display that I undertand, such as CPD RECORDS, or Patrol 4, but then sometimes it just says MOT: 06320 ? How do I find out what these are and make it display it on the 4th line o the scanner display. I still haven't quite got this trunking thing down. I have been programing my p93 or about 6 months now, but I have never put together a file myself, I just use otheres that I have found here.

Thanks in advance.

That could be an ID that you have not assigned an alpha tag for.
Press PGM, TRUNK then up and down to review your ID sub-bank listings.
If its listed, and you know what it is, Press TEXT and key in the
information. If however, it's already listed with an alpha tag,
then review the ID's to find a duplicated ID number without a tag.

Frank

As far as I know, they are all Rev. 1.00 and I don't know of any bugs.

About MOT 06320. That is a talk group. It might be assigned to the Fire Dept. or the Water Dept. or the Police Dept. To find out who it is you will just have to listen a while and figure out what they are talking about. Then you can add the description via the program. Then the 4th line will read like; DESCRIPTION 6320 (the zero gets dropped).
Talk groups are from 16 to 65536, usually one every 32 numbers: 16, 48, 80, etc.
To see MOT 06320 you must be running in OPEN mode - press FUNC 5 to change to CLOSED mode. In CLOSED mode you will only hear the talk groups you have programmed into the scanner.
I suggest you read pages 20-26 of the manual.
Dick

From: MIKE NOBAG
Topic: 7677 Message: 7684

If you are scanning in open mode you will get the tg's that you have programmed into that bank, plus any other that are transmitting on that freq. If you scan in closed mode you will only get the tg's that you have programmed in that bank. When it stops on a trunked channel and is showing only numbers (06320) of the tg's , press the "TEXT" button, and the text will show.

Good luck, and have fun.

Hey everyone, just want to let you know, that FireFeeds.Com has just finished it's test and trial period, and is now operational.

At this time we have the following live fire feeds:

CA - San Diego ---- The San Diego live feed is also covering the San Diego
Major Brush fire operations.
FL - Orlando
MD - Baltimore
PA - Harrisburg
PA - Philadelphia
TX - Dallas

Coverage for the following cities is in the works, and will be featured soon
on FireFeeds.com:

CA - Los Angeles (ETA - November 10th)
CA - San Francisco
DC - Washington
FL - Miami
GA - Atlanta
IL - Chicago
IN - Indianapolis
LA - New Orleans (ETA - October 30th)
MA - Boston (ETA - November 7th)
MI - Detroit
MI - Lansing (ETA - October 30th)
MN - Minneapolis/St. Paul
NJ - Newark/North NJ Metro (ETA - October 31st)
NV - Las Vegas (ETA - November 10th)
NY - Buffalo (ETA - October 30th)
NY - New York City
OR - Portland
TN - Nashville
TX - Houston
UT - Salt Lake City
VA - Norfolk
WA - Seattle

We are also still looking for Feed Providers for all major Cities, please
contact support@... if you are interested in providing a 24/7 live
fire feed. There are several benefits for our feed providers.

To Subscribe to FireFeeds.Com just go to our website and click on Subscribe
Now! at the top or left side of the main page.

It means that you're scanning in open mode and this is
a TG that's not in your ID list...

Press TRUNK to add it when it comes up...then find out
who it belongs to online...then tag it...

7690. back light mod for pro95

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-03 00:40:47 UTC
From: mail2me61761
Topic: 7690 Message: 7690

"my2o01mustang" has a picture of a 93 or 95 with a blue lighted lcd screen.(In the photo section of this board) I was wondering if anyone else has done this mod and thoughts on where to get bulbs and procedures to install!
The green lit one in mine is dim and to me seems out dated and dull!

From: Dave
Topic: 7691 Message: 7691

http://davediehl.inetcam.com:8080

My ISP claims they lock port80 on all incoming http request, so I set up something else and need to see if this will work... I have forwarded the link above to another port and sent it to the server in the basement... I am curious as to if the outside world can see and hear the link... Input off list is appreciated... Its a 2067 with video and audio...

7692. Whats set up...

Date: 2003-11-04 09:08:22 UTC
From: Dave
Topic: 7691 Message: 7692

The following is a short list of what it takes to run a feed such as this...

DSL, cable, or broadband connection
10/100 Network card, can be a 10 base T, it will work for audio as long as you can stuff it into your router.
Pentium class processor with one USB connection
64 Meg RAM for the software
850 Meg hard drive (800 for Bill Gates and 50 for you)
640 X 480 VGA video
Windows 98SE (USB support)
USB webcam (cheap is good R/S for 19.99)
Soundblaster compatable card (Mic input)
Text display scanner (Pro95 is on sale)
mono to stereo adaptor with a 6 foot stereo 1/8 cord
Inetcam software from www.inetcam.com and tell em I even sent ya. They know I have 3.01 Ivista.

Inetcam will even show the network lag and delay... This can be good when your looking for the image to see what your hearing... As you hopefully will see, I have my banks and frequencies labled with as much information as I can... Don's software is great for filling in the blanks...

My point here is that it doesn't take much as long as its a 100% dedicated terminal... I have installed PCAnywhere on this unit simply so I don't have to leave my desk to make changes to the audio settings... I can be connected via the network and hear what the public hears without the feedback and without hearing the actual output of the radio... If I could get a data slicer to actually work, I could send the desktop image on this software as well... This is the radio that is tapped, I simply haven't had the time to figure out why my slicer project isn't working...

If you really want to get carried away, you can use 2 scanners and with the aircraft headphone adaptor that R/S has, feed a left side audio from one radio and a right side from the other radio... This would give seperate sounds in seperate sides of the listener... that may be another day for me here... This was enough for one night...

COOL!!!! Thanks for the input... Its going to run 24/7 here... I
may add a second scanner and second camera as time goes on... Thanks
again to all that emailed...

7696. RE: need input again

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-04 21:46:20 UTC
From: John D. Hays
Topic: 7691 Message: 7696

Dave,

Here are a couple of tricks:

You can get a domain name pretty cheap: http://www.godaddy.com
Once you have a domain name (ie.): my2067online.com (or whatever).
Goto http://www.zoneedit.com and set up a free DNS (update for the servers
on godaddy.com) --- then you can send people the URL to your PC -- use
Zone Edit's free Dynamic DNS service, if you have a non-static IP (if your
IP address changes from time to time).

Then zone edit has a web redirect service that will allow people to put in
your domain name without the 8080 and they will redirect it to your 8080
port for you.

Its a 2067...

You might just hear...

In Indiana:

Steuben County (police, fire, misc)
DeKalb County (police and fire)
Lagrange County (police)
Noble County (police, fire)
District 22 State Police
Parkview Hospital Samaritan Helicopter

In Ohio:

Williams County Fire

In Michigan:

Coldwater Fire
Hillsdale Fire

so far...

I am planning on hooking into one of the antennas on the 80 foot tower here sometime tomorrow afternoon... That should enlighten the relatively quiet evenings... With that I (you) should easily hear Warsaw and others... I have not reprogrammed this for everything yet pending on its performance... Now that some of the bugs are out of the system, I can take time and do that... There has been a minimum of 2 connections all day and I really don't want to take them offline til I'm 100% ready to finish everything... But its getting pretty smooth in its operation... The machine its on has gone 72 hours so far without a crash and no memory leak downs... Its all new components on an old Pentium 100 board... Its sole purpose in life is to feed this program to the network... I had to limit the camera connections to 10 users at a time to limit the bandwidth going out... Camera users can have a max feed time of 750 minutes before disconnect and unlimited audio connections and duration... That may change at a later date as well... The lights on the router are showing about 50% capacity as I type... There is 6 audio and 2 video running currently... And its quiet here... The amount of information going out does not change, its a packet of information

that doesn't matter if its dead audio or voices...

District 22 has their radio training on Indiana's Safe-T on Dec. 5th... I will most likely at that time buy a 96 and program the digital system that is to be online January 9th... This is the 4th scanner running in the house... The wife isn't really up on the idea of me adding another one to my collection of "stuff." I am working til 1 Wed and hope to be done with this by 4...

Let me know the system frequencies when you get them, and talkgroups if
you get them, so I can add them to my PRO-96...if you don't mind :)

is that a 95 how did you get to lines for the alpha tag

Dave wrote:

The following is a short list of what it takes to run a feed such as this...

DSL, cable, or broadband connection
10/100 Network card, can be a 10 base T, it will work for audio as long as you can stuff it into your router.
Pentium class processor with one USB connection
64 Meg RAM for the software
850 Meg hard drive (800 for Bill Gates and 50 for you)
640 X 480 VGA video
Windows 98SE (USB support)
USB webcam (cheap is good R/S for 19.99)
Soundblaster compatable card (Mic input)
Text display scanner (Pro95 is on sale)
mono to stereo adaptor with a 6 foot stereo 1/8 cord
Inetcam software from www.inetcam.com and tell em I even sent ya. They know I have 3.01 Ivista.

Inetcam will even show the network lag and delay... This can be good when your looking for the image to see what your hearing... As you hopefully will see, I have my banks and frequencies labled with as much information as I can... Don's software is great for filling in the blanks...

My point here is that it doesn't take much as long as its a 100% dedicated terminal... I have installed PCAnywhere on this unit simply so I don't have to leave my desk to make changes to the audio settings... I can be connected via the network and hear what the public hears without the feedback and without hearing the actual output of the radio... If I could get a data slicer to actually work, I could send the desktop image on this software as well... This is the radio that is tapped, I simply haven't had the time to figure out why my slicer project isn't working...

If you really want to get carried away, you can use 2 scanners and with the aircraft headphone adaptor that R/S has, feed a left side

audio from one radio and a right side from the other radio... This would give seperate sounds in seperate sides of the listener... that may be another day for me here... This was enough for one night...

Although many NiMH AA-cell bargains have been reported, here is another: Our local Sam's Warehouse has a name-brand set of eight 1850-mAh cells PLUS a charger for AA, AAA, and 9-volt cells for just under $20. This will be of interest to those of us with PRO scanners, and who make their own Uniden packs, as I do.

You will lose some signal strength in each scanner but it may not be noticeable, especially on 800 mhz cuz it is very short range anyhow. You will never catch a serious SWL doing this.

Mike

I am here... As long as you have a good antenna somewhere, it will work... I use an attenuator on mine because of the massive amount of signal I get 3 blocks from the sheriffs transmitter site... It tends to bleed alot anyway... So the slight bit of loss in the tee design actually means nothing to me...

You can, however you will loose a lot of signal, to the point that
some weak transmissions may not come in anymore.

If you want to do it right, get yourself a Multicoupler:
http://www.scancat.com/mlticplr.html

They are expensive, however you will have no signal loss.

7723. 400 mhz antenna question

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-06 00:37:02 UTC
From: Marty Grove
Topic: 7714 Message: 7723

I'm looking for an antenna that is suited for around 450 mhz. I'm particularly looking for a short antenna that mounts directly on my Pro95. I use my Pro95 while working on a pit crew, and the standard antenna is annoyingly in the way. So, I was wondering if anyone has a good recommendation for a "stubby" antenna for this frequency range.

Thanks!

Marty

Hooking two scanners together can cause one or the other to lock in on signals within the other scanner. And sometimes it just kills some of the signal. Thats why they make splitters. It solves the problem.

Radio Shack, Grove-ent.com, Maxrad,com and AES.com all carry stubby's for limited pickup in the 400mhz range. Just perfect for you if your listening in the pits.

AES is in Orlando near Herdon (Orlando Executive Airport) They also have a website.

Another option would be to buy two adjustable 90º BNC connectors which
would allow you to fold the stock antenna straight down. I always
have these on my scanner and it makes it a lot easier to carry in a
bag or pocket.

As I replied on another, moderated, list, the most common reason for blanks not accepting typing in Win93 is that they are NOT blank. They are, by default, filled with invisible blank characters. To fill the field, pretend it is filled with Xs, highlight the invisible Xs, and delete or just start typing.

If you do not first have EVERY trunked frequency properly Rx Mode coded, Motorola or EDACS, and/or if you do not have the Bank Type properly chosen, you may not be allowed to fill a Talkgroup field. Remember, there are 50 total per bank, and that conventional (FM or AM) freqs may also be entered in a bank with trunked freqs, but two trunked systems may not be entered into one bank (unless you fully understand how to sometimes do so). Also remember that EDACS freqs MUST be entered in the right order, and MUST start in a slot numbered ending in 01, NOT 00.

Although you can monitor a trunked system in "Open" mode without talkgroups entered, to avoid hearing unwanted groups, the wanted groups must be entered, and you must switch to "Closed" mode.

Keep us posted on your progress or questions!

Joe

7735. skip bank

on the pro 95 if on bank 5 the 500 channel on up I only have 501 502 503 on there and it skips that banks you can see it go from bank 4 to bank 1 how many do you need to have in a abnk for it to scan that bank.

7736. Re: skip bank

If the PRO-95 scanned at the rate of one channel per second, you would see it stop on Bank 5 for three seconds.

Since it is a mite faster than that, it's on Bank 5 for only an itsy-bitsy moment, hardly time for the LCD crystals to react, and way too fast for you to see them trying to darken.

sometimes if there are not many frequencies progeammed in a bank, it will look like it is not scanning it. but it really is scanning it though.

The testing that I personally completed on the 95 showed 63 channels
a second as I posted several months back... This means the radio is
scanning your bank for a total of .6 seconds at the most... Its not
that its skipping the bank, its simply going so fast with the 3 you
have in there, you just don't see it... If you put in one of the FRS
radio channels then use your FRS radio to talk to the wife, it will
lock on it...

Another option would be to buy two adjustable 90º BNC connectors which
would allow you to fold the stock antenna straight down. I always
have these on my scanner and it makes it a lot easier to carry in a
bag or pocket.

The Group List Owners and Moderators.

7749. Searching extended frequencies

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-09 18:24:49 UTC
From: Don Starr
Topic: 7743 Message: 7749

A Win95 user has reported some interesting info about the "extended frequencies" available via that software...

(note that the following information also applies to the PRO-93 and Win93)

This user was able to program an "out-of-range" frequency into a channel, then use "TUNE mode" to search. Here's what he did:

1. Use Win95 to program a channel with a frequency outside the PRO-95's "normal" ranges.
2. Select that channel in "manual mode".
3. Press FUNC TUNE
4. The scanner moves the frequency into "tune mode", and you can search from there.

If you let "tune mode" move into one of the scanner's "normal" ranges, then it will be "stuck" in that normal range.

-Don

7750. question

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-09 21:04:18 UTC
From: Richard Engler
Topic: 4083 Message: 7750

I think most of the members are ham oper.
There was a posting posted about using some kind of
an spliter to connect one outside scanner antenna.
I am using an cone antenna for one.I realize you have
to use a certain size cable(Rg58)or somthing like
that.
then you use a piece of cable cable with the cable
connector that you connect to your cable box and get
a BCN connectorand connect to other end and connect
antenna lead in to the center of the spliter and 2
other cables to the other 2 connectors on the
splitter. Hope you understand what iam asking
Thanks to all
Rich

I'm not sure about your question. You can run two scanners off one antenna. For your discone you should use a PL to F adp at antenna and run RG-6 to a TV/VCR type splitter. Run short pc's of RG-6 to scanner using F to BNC adp. The RG-58 want work with the splitter. ALL of coax and connectors for several scanners is RG-6 and TV/VCR splitters and switches. It works perfect.

7752. Re: [PRO-93_95] skip bank

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-10 12:53:43 UTC
From: rjcasey@juno.com
Topic: 7714 Message: 7752

Here is a tip I use on my Pro 95. It works because I am listening to a lot of non-trunked frequencies. I live in south metro Atlanta and have my banks divided by county. The top ten channels in each bank I reserve for the frequencies I want to listen to the most (channels x90-x99, x=bank number). This way, no matter how many banks I am scanning, I stand a good chance of hearing the stuff I want the most. If you are in an area with a lot of trunked frequencies, some of then repeat fire or police dispatch on a nontrunked frequency and you could program that one into all of your banks.

Topic: 7753 Message: 7753

Greetings, group. I am a new Pro 95 owner in Fairfax, VA. I am wondering if there are any other members in my area. I would be interested in exchanging hints and tips on programming and using the scanner. I have several trunking systems programmed in, but from further research, I think I am out of luck with most of the interesting stuff (Police mostly) as they are all digital and the Pro 95 does not do digital.

Anyone have a frequency list (non-trunked) where they've heard interesting things? I found Fairfax and Prince William fire departments in the clear and I found something else this morning that sounded like either security or some other police department (also non-trunked).

7754. Battery level

Just wondering if there was anyway to see what the battery level was for my Pro 93. I know that there are several key combinations for various functions but haven't come across any for the battery level. Thanks for any help.

Brian
Duvall, WA

I just bought a Pro - 95 and had the guy at radioshack program it for me using something called scancat.
I mosied on home and turned it on. AH HA.. I hear stuff.. then a few minutes later Silence.

I look on the screen and see
0.23456789 and the curser is blinking on the 3
+.++++++++
Scan up...

I've tried to hit every key on the scanner to see if it'll do anything at all to no avail. About the only thing I can do is turn it off and back on again. Does anybody know what I can do to keep it scanning?

Thanks so much..

I'll go back and re-read the booklet and see what it says also.

Of COURSE it would be poor - When it's on your belt, the presence of your body alongside the antenna, reduces the effective "sensitivity" of the Scanner wherever you are - Now place it ON your hip AND inside a steel conveyance, and it get's even worse.

I set mine on the Dash in a position that keeps the antenna near the Window-level for signal acquisition, although many "tinted windows" ARE of a conductive, metal-deposited-film and that hurts, also. :-)

Best way: get an external antenna - magnetic or (as I use) a glass-mounted version..

Hope that helps

Tom

Many things will lock up a scanner. Your computer will do it. Look at the display. If its showing a freq then press lockout. Next Post your location. Someone near you may have a better program you could clone.

You should skip channel zero if you are programming an EDACS trunk system... The reason for this is that the frequencies must be in an order that they are programmed into the radio system... There is no channel zero in a transmitting radio, so you must follow suit with your scanner... You can easily program conventional frequencies in these locations...

Topic: 7784 Message: 7784

What is the trick to get this to work? I can't get it to work with my home machine, it's like it never sees the scanner. On my laptop it starts to work but I always get a timeout error, "Timed out waiting for 33529 bytes, received 33490". I got it to download from scanner once. All ideas are appreciated.

Bob

If you just want a replacement for the OEM antenna, this is the one
you want:
http://www.radioshack.com/product.asp?cookie%5Ftest=1&catalog%5Fname=CTLG&product%5Fid=20%
2D283

It all depends on WHAT you use the scanner for... If you use it primarily for 800 MHz trunking, then the Radio Shack stubby 400/800 Mhz antenna works nicely.

For general scanning, the stock rubber duck works well, or you can get a telescoping antenna with a center load. That can be adjusted fro whatever band you are currently scanning.

If you scan mainly aircraft band, go to a Ham supply store and pick up an antenna built for 2 meters.

This is a great antenna, is only $14.95 at the store, and picks up 800 MHz exceptionally well, as well as, 460 MHz very well. It even picks up acceptable VHF high.

Radio Shack 800MHz antenna, part #20-283

Depends on your primary need. The one my wife uses in her van has a 1/4 wave UHF duck. 75% of traffic in UHF 15% VHF and 10% 800. Live near the towers and no problem w/ any freq. On my 96 I use 1/4 wave 800 about 3". Primary use is 800 digital but works fine on all local freqs. Everybody uses something other than original because it looks more professional. Check bncantenna dot com

Mine works without an antenna :D

But seriously I've put 5 different ones on there and they all seem to work the same. Stock, the comet 1.5" stubby one, a huge comet one that's like 2 feet long and looks ridiculous, a no name 2m/440 one (looks similar to the RS 800)... Guess I have a good signal to start. The RS 800 does look better than stock. How about their "Stubby Antenna for Race Scanner" 20-283?

7795. Fleetmap Programing

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-14 15:33:34 UTC
From: nissanpower65
Topic: 7795 Message: 7795

I'm having a problem programing the fleetmap in my Pro95. After entering 15 for block 0, it doesn't go to block 1, 2, etc.

This is a new scanner, and I don't have a cable for it yet, so I'm trying to hand program some stuff into it while I wait for the cable.

I'm just not sure if I've done something wrong, or if this scanner is defective. ???
Anyone have any ideas?

TIA, Dan

> etc.

I'll presume that you mean size code 14, not 15 (there is
no size code 15).

Size code 14 occupies 8 blocks, which is the entire fleet
map. If you set any of the 8 blocks to 14, they all must
be 14. That's why the scanner doesn't go to 1, 2, etc. -
those blocks are already filled with 14.

Thanks Don. I just got a reply from someone privately.
He told me to put in 11 instead, that way I could program the one
block to 3, and all the others will be 11.
Seems to be working so far......

7804. WIN 93 Help

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-14 23:05:06 UTC
From: skipster23
Topic: 7804 Message: 7804

I am hoping some one can help refresh my memory. I have created a small table using Word and have tried to cut and paste the Text Tags as well as the pertaining frequencies into Win93. I know I have done this before, however now whenever I go to paste the frequencies it pastes it into the Text Tag area. I have tried this with notepad as well (no table of course, just two columns) and still no luck. Is this possible or am I just dreaming I did this before? I'm using Win93 V00.31? Thanks for any help.
Matt

From: nissanpower65
Topic: 7807 Message: 7807

I'm having a problem programing this scanner. I'm trying to enter a Motorola ASTRO 3600 baud system, but I can't set the mode to MO. It only goes from AM to FM, no MO or ED. I've been told by people with PRO-92 that they've done it, so I can't see that the PRO-95 won't. Here's the system I'm trying to program in. Only the analog talkgoups, obviously.
http://www.trunkedradio.net/modules.php?name=TRSDB&sid=861

Anyone able to tell me the trick to set this up in the 95?

TIA,
Dan

If you're not using Win95, why not? MO is one of the four choices you have when you click on the graphic interface screen spaces under Rx Mode. Win95 makes it VERY easy to just type in the alpha tags, and allows you to enter out-of-spec frequencies, too. I repeat, "If you're not using Win95, why not?" It's free (for a modest donation, IF you care to reward the man who wrote it for us, Dan Starr) at www.starrsoft.com

Thanks Joe
I'm not using it because I don't have the cable.....*yet*
But from what I've been reading on another board, even if I do use
Win95, it still won't scan it properly. Others in my area have tried,
and it ends up locking on the control channel, and not following the
talkgroup.
Unless someone here can tell me that they have the Pro95 trunking VHF
without any problems, I'm sending this scanner back.

Dan

7824. Help with trunks

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-18 16:02:21 UTC
From: holabr
Topic: 7824 Message: 7824

My county is in the process of implementing an 800MHz trunked
Motorola system with the following info I got off a local Web site.

853.3125/808.3125
854.0125/809.0125

856.7125/811.7125
856.9875/811.9875
857.2375/812.2375
857.7125/812.7125
857.9875/812.9875
858.7125/813.7125
858.9875/813.9875
859.2375/814.2375
859.7125/814.7125
859.9875/814.9875

My question is what is the reason for 2 frequencies in each line and
how do I go about programming this information into my PRO-95?
Thanks for any and all help.

The second frequency in each line is the repeater input frequency. You
don't need to enter these. Just enter the higher frequencies into one bank
of the radio, and set the mode to "MO" (Motorola).

Ken

I did see something for Linux a few days ago but you had to pay for it.
I just can’t recall WHERE it was. I believe I was looking for a cable
for my scanner and I saw it in there.
Since I have NEVER programmed anything in C I’m gonna have to really
look around see what I can learn about doing this. Heck, I don’t even
KNOW what to use with Linux to program.
WAaaaaaaaaaa, I’m not a programmer. Maybe I should go throw myself at
the feet of Don Starr and bat my eyelashes…?..... “Accck, rolling
around avoiding tips of boots!”

Well the quest goes on… I’ll search some more and see what I can come
up with!

If you know which is the controller you only have to enter one freq. If it
has an alternate then enter two freq. The scanner will find the rest.

Motorola trunking systems can have up to 4 control channels. Some systems alternate them daily, some less often. The point is that unless you know for sure, it is best to put all the freqs.in. You'll still have dozens of empty channels in that bank.

Type II systems usually only have one or two control ch's per tower. Type I systems can have more depending on size of system.

If you have all of a system's freqs. in a bank, yet the radio uses only the data stream on the active control channel - so what?

Most of us don't know the makeup of every Mot. trunking system in the country, so to be on the safe side I believe my previous advice is valid.

I thought I had..... I just rechecked my post and you're right, I
didn't..... But if you had looked at the link, you'd see that it was VHF.
None the less, it won't do it.
Thanks everyone! :)

Should be a good possibility... I spent time in Waukegon during school... That was back when the Pro36 had just come out... You are so close that an outdoor antenna may do what you need if you get it up in the air...

You could also use a directional antenna. Depending on
the frequencies, if you want just hi and lo vhf then a
vhf tv antenna will work. If you want uhf and 800 then
a wide band uhf antenna will work. I have used both
with great success of distances of 100 miles(about 60
miles on 800). One note, TV antennas are horizontally
polarized. For best results, turn the antenna so the
elements are pointing up and down and drill new holes
for the clamps.

7840. FRS radio

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-19 20:12:18 UTC
From: Zach Samson
Topic: 7840 Message: 7840

Hi,

I know this is a little off topic and I apologize if it annoys anyone (I'll make it quick). My family and I are traveling to Cancun, Mexico in December. I am not bringing my scanner for 2 reason.
1. I don't know how the customs will react to it, and I don't want them to take it away from me.
2. I know Spanish, but don't know it fluently enough and I wouldn't understand what they would be saying anyway.

But here is my real question... Are FRS radio's legal in Mexico? I know GMRS is not, but am not sure about FRS. Anyone know?

Thanks,
Zach

7849. Storing talk group IDs prevents scanning

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-20 01:18:20 UTC
From: johnacquercus
Topic: 7849 Message: 7849

I'm using Win95 to program Motorola Type II SmartZone System Talkgroups (analog). I have entered the trunking frequencies and have the Rx Mode set to MOT. Scanning works fine as long as I leave the "Type" setting as "Conv". Now when I store talk groups which have a 5 digit ID, the Type setting changes to "MOT". But now when I try to scan, nothing is picked up.

Help please. Thanks in advance.

John

Must have had cell phone close to scanner after it was programmed. Dont answer phone while holding scanner in other hand. Thats another thought, but, it really does happen. Larry

No that's not it either. Once I remove the stored talk groups and
return the "Type" input to "Conv", it scans fine. When the "Type"
is set to "MOT", it won't scan.

Larry, where do you get the idea that having a cell phone near the
scanner will cause problems with it... that seems to be your answer
to ever odd behavior that anyone reports.

Personally, my scanner and cell phone sit next to each other for
several hours almost ever night as I sit at a local restaurant and
eat my dinner. The cell phone is transmitting constantly, as it's my
connection to the Internet at the time.

The ONLY odd problem I've had was the one time that my display's
contrast setting got thrown all out of whack, and I traced that down
to weeks batteries.

The CPU in the PRO-95 is reasonably well shielded, and the power
output form (most) cell phones is low enough that I would be
extremely surprised if it actually caused a problem.

The only exception to this that I can think of off the top of my head
would be NexTEL radios (They are not truly cell phones) as they
transmit with 4-6 times more power then your typical cell phone.
(1-1.5 Watts, v.s. 0.25-0.5 Watts) But even with this extra power
output, I doubt that it would corrupt such specific things in the
memory. Rather, it would more likely cause the entire CPU to crash,
OR completely scramble the entire NVRam bank. Bit-specific errors
like you keep talking about are are unlikely to be caused by RF Pulse
interference such as a cell phone emits.

I do the programming for R/S and others for a 10 county area. Have customers with nextels also. The 2067 seems to be worst with this problem. Have had customers come in my office and scramble my 2067 before. Mobile bag phones with outside antennas will scramble 2067 mobiles. 3 watt mobile on 5db gain ant will do it to it. I also manage gated warehouse. Had trouble with gate controller being shut down for no reason. Have it on tape. Tenant touching keypad with left hand and holding cell phone with right hand. Had to post warnings. Problem stopped. Strong 800MHz digital signal will screw up scanner. Could be a certain freq. You know the 92 and 2067 can be overloaded with strong RF. I just think that most people never thought about that problem. Lil Cricket stores in this area posted sign on door. No cell phones or nextels inside. They also having problems with security equip and electronic cash regesters. I think it will get worse before it gets better. Best Regards, Larry

Dave -
Do you have anything to report thus far? I'm wondering how long the batteries will last and what their life expectancy will be after being subjected to a full charge in just 15 minutes.

There is a new part number of a 15 minute charge time battery... I just got these and they are a 2000 milliamp NiMh AA that charges in 15 minutes... Part numbers of 23-0039 for charger and all... Made by Rayovac... Will type more later after tinkering with a set...

I get the Digest; this may be late, and the problem may be already solved., so I apologize in advance!

1. It won't scan when set to MO. You do not have the control channel entered correctly.

2. It will scan (but not trunk track) when set to CONV. If you had the control channel entered correctly, it would stop on the control channel and never leave it. You don't have the control channel entered correctly.

3. If you have tried to enter only the control channel(s) and not the rest, enter all of them and be sure. The system may have changed control channels since your system info was compiled.

Joe

7864. PRO-93 Clicking Noise

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-22 04:31:33 UTC
From: Gabriel Peters
Topic: 7864 Message: 7864

Here's a wierd one. Starting about, i'd say, 3 weeks ago, my PRO-93 scanner started making this really really strange clicking noise, nothing its ever done before since I got it (got it at the first shipment when it was released)

It happens at random times, seemingly, weather im moving the scanner or its sitting dead still, and it sounds like.. CLICK-CLICK, almost as if there's a wire arcing inside the scanner or something like that (but there isnt voltages high enough inside it to do that, right?) Even if the scanner volume is set all the way to the bottom its still audible when it happens, the volume control seems to have no effect on it.. and it occurs no matter what frequency im scanning or if im trunking, etc.. i've modded my scanner with the headphone jack audio output mod and added a discriminator tap, so I cant exactly send it in to RS for servicing, but still I did the mods almost right after I purchased the scanner and its taken 2 years for this glitch to show up.. I've taken the scanner apart and to my best visual assessment everything looks just fine inside.

Scanner works 100% aside from this problem. WIERD!

Uploaded a small recording of what this click sounds like.

Also sometimes its not just a click-click, but sometimes a click-click-click, but always the same duration of noise and the same gap between clicks... strange indeed :O

http://home.earthlink.net/~gpx1/clicknoise.wav

File's a 96KB wav file, should be able to play it in just about anything... the click is at the end, note that I did not adjust the volume before the clicking occured, thats just the volume it does it at.. recorded from the scanners headphone output but is also audible on the speaker, not sure if it's audible on the discriminator output.

At the moment there happens to be, however this does occur even when
there is not a cellphone near by, even at my other house that doesnt
even have electricity hooked up, so quite a small chance of nearby
RF interference from something like a cell phone or consumer
device...

Although it COULD be outside interference, I dont have a wireless network (although my neighbors could have one) but I dont think there'd be one near my other house.. also, if it was interference, wouldn't the scanner stop on a frequency to make the noise? It makes the noise even while still in scan or search mode without stopping on a frequency.

I'll try leaving it with the antenna removed tonight and see if I hear any pops out of it.

That buzzing sound is nothing more then the audio amplifier picking up the digital signal.

Get your cell phone near amplified speakers, or even your stereo in your car, and you will hear the same thing.

What I'm having a hard time believing is that cell-phones can cause specific register corruption in the CPU of a scanner. In my experience, things like that are an "all or nothing" deal. Either the scanner's memory gets corrupted, or it doesn't.

Also, the other situations that Larry mentioned... that would lead me to believe that the equipment was not adequately shielded, or that there was a problem (Bad ground, etc) with the shielding that was in place.

Also, I have just finished doing some experimenting with my PRO-95 and my 6 watt Icom HT. Even after prolonged exposure, and rapid short exposure to RF at both 2m and 70cm wavelengths, there is no corruption of the data on the scanner, nor any odd behavior, other then odd sounds from the speaker when I do transmit near it.

After these experiments, and my "real world" use of the scanner near my cell phone for prolonged periods, I fail to find any correlation between excessive RF exposure and memory corruption of a PRO-95.

As for the PRO-2066... the one in my car gets plenty of RF exposure, as it's mounted in my dash board, right next to the HT that I use in the car... and I've never had to re-program it either.

The key point here is that the volume of the noise is the same no matter what the volume is set at, and it comes over the speaker. It is definitely after the pre-amp stage of the radio.
My best guess is the output IC is on it's way out, or you have a cold solder joint somewhere in the output section.

Even my Motorola MTX8000 picks up "clicking sounds" when it's too close to my Uniden MR8100. Definitely your problem is caused by another device. Go out into the middle of nowhere, with no other equipment (even a beeper) and see if it happens.

Uploaded a small recording of what this click sounds like.

Also sometimes its not just a click-click, but sometimes a click-click-click, but always the same duration of noise and the same gap between clicks... strange indeed :O

http://home.earthlink.net/~gpx1/clicknoise.wav

File's a 96KB wav file, should be able to play it in just about anything... the click is at the end, note that I did not adjust the volume before the clicking occured, thats just the volume it does it at.. recorded from the scanners headphone output but is also audible on the speaker, not sure if it's audible on the discriminator output.

I recently purchased a Pro-95 and the programming cable for it. I programmed in some popular shortwave frequencies, but I can't hear anything, not even WWV. I have tried the rubber duck antenna, a CB antenna, and a telescoping whip, but still nothing. I can't even pick up the FM or AM broadcast band. Does anyone know if the Pro-95 can pick up shortwave? If so, what kind of antenna should I use? Has anybody had any luck with shortwave on the Pro-95? Any help is greatly appreciated. Thanks a bunch!

While Don't wonderful software CAN allow us to program "out of band"
frequencies into the scanner, there is a limit to how low of a
frequency the heterodyne (Is that the correct term?) receiver is
capable of tuning.

I don't know the upper and lower limits offhand, but I'm sure that it
is just a simple technical limitation of the hardware itself.

With the 95, when programming out of band the sensitivity is
extremely poor, as the front end has several notch filters to help
improve selectivity on it's "normal" bands. This poor sensitivity
has been reported on Mill Air and other bands.

As for broadcast FM band, since that is a "Wide Band" transmission,
and the receiver can only pick up Narrow Band transmissions, the
audio will be distorted.

You guys were right! I tried it with the antenna off in the middle of my backyard.. didnt get anything for a good hour.. came inside the house, clicking all over. Took it on a drive to Los Angeles, clicking occaisionally on the way... finally figured out what it was, my new cell phone :X I switched service a bit ago and didn't think it had anything to do with it, but then I realized it started around the same time.. I used to have a Nokia 5190 which would only make noise I could hear on the scanner during a call or when it was ringing, and only in very close proximity.. this new phone (Motorola T120, free w/at&t) makes noise in my scanner clear across the room, and even when there isnt a call or the phone is ringing. Doh! Anyone know of a phone that works well with AT&T that wouldnt have this problem, as I usually carry the scanner around with me and have to keep the phone near as well, almost never seperate the two, thats why I thought something was going out inside :O

-Gabe

P.S. thanks for the help :D

Topic: 7883 Message: 7883

By the way, Sam's Club has a similar Rayovac I-C3 NiMH package, but with more parts and for less money. I just got it tonight. If I get any big news while using them in the next few weeks, I'll try to drop the group a note.

$29.87
Rayovac item IC3-CP, includes:
15-minute I-C3 charger with AC adapter,
4 AA 2000 mAh I-C3 NiMH batteries, and
power cord to enable charging in car.

Each club location has different items, so call before you visit. Charges 1-4 AA or AAA's. The manual says that it will charge 1-4 AA or AAA regular NiCd or NiMH batteries overnight. Also, trickle charging is ok.

The wall wart (AC adapter) is a real wart hog: it claims to output 14.5 volts, 4.5 amps! Of course, if you want to charge high-capacity batteries in a hurry, you do need lots of power.

Here are a few good links:
I-C3 basics:
http://www.steves-digicams.com/2003_reviews/rayovac_ic3.html
Good NiMH FAQ's:
http://www.thomas-distributing.com/maha-educate-batteries.htm
Some NiMH batteries used in digital cameras:
http://www.steves-digicams.com/nimh_batteries.html
More than you wanted to know:
http://www.imaging-resource.com/ACCS/BATTS/BATTS.HTM

Wal-Mart has additional I-C3 batteries. $12.74 for a 4-pack of either AA's (2000 mAh) or AAA's (800 mAh). I picked up one of each.

Charging each 4-pack of AA's and AAA's took 15-16 minutes. The charger has a fan, and I set a small desk fan blowing on them to help. The extra fan is not necessary, but I'm trying to be nice to them. :) The AA's still got hot, borderline too hot to firmly hold. The AAA's were barely warm. These batteries will go into my newly acquired Pro-93* and bicycle lights. A quick test of my bike headlight looked just like new alkalines.

Sam's Club also has some Energizer NiMH packages:

$19.88 for 8 1850 mAh AA's and charger for 2 or 4 NiMH (14 hrs) or NiCd (7 hrs), AA only.

$25.43 for 4 1850 mAh AA's and charger for 1-4 NiMH (30 min), AA
or AAA.

I don't work for Sam's. I just like their deals.

*My recent Pro-93 purchase from Radio Shack is a story in itself.
Look for an upcoming e-mail from me.

7884. My Pro-93 purchase (How to find discontinued items at Radio Shack)

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-23 09:27:53 UTC
From: Griffin Smith
Topic: 7884 Message: 7884

My Pro-93 clearance buy from Radio Shack this week:

Sit down and hold on to your keyboard: $40! Original price was
$250 in Oct. 2001.

I had a 20-channel base scanner several years ago in another state.
I wanted to give scanning another shot now that trunktracking,
computer upload & download, and searching are common, but
wasn't sure how much I wanted to spend on a scanner. Also with
Austin having APCO-25 phase II (not supported even by the Pro-96
currently), I wasn't sure whether I'd find much interesting to listen to.

A discounted Pro-92 or Pro-93 sounded about right, but of course
the problem is getting one. Asking prices for used ones were a little
over $100.

What I learned about buying discontinued items from Radio Shack:

A discontinued item no longer appears on www.radioshack.com, so
you have to visit or call stores to perform searches of their local
areas for you.

The Key: Regional Searches.

Radio Shack (RS) stores are grouped into districts and regions. A
city such as Austin, TX has about 2 districts. A region is usually
from one to several states.

If you ask for a search nonspecifically, a RS employee will usually
search just his/her store and maybe the district. A regional search
requires the store's Internet-connected computer and an employee
with a little more knowledge and willing to take about 10 extra
seconds to help you. Sometimes it takes a manager. Some
employees don't even know that a regional search can be done and
will tell you that you'd have to call each individual store. Some say
that their screen shows nothing. Some claim they can do a national
search. Some ask whether you are calling from corporate
headquarters to test their customer service.

Ask politely for a regional search. If they help you, they are doing
you a favor. Sometimes their store is just too busy to help a caller
track down a cheap item. Upon any stumbling blocks, my
preference was to just call another store, since there are
approximately 9,000 in the US.

Who to call:

You need only one regional search per region, and you keep hitting the regions until you find what you want. Use the store locator at the top right of www.radioshack.com. Try a major city from each state. Try not to call the first store listed--they get enough calls for searches as it is.

I suspect that it is best to call a corporate store and not a mom-and-pop TV repair business that happens to carry some RS items, but I don't know, since I called only corporate stores. I think that you can tell the corporate stores because through the store locator, a corporate store map link has "01-" like
http://tandy.Know-Where.com/RadioShack/cgi/site?01-8097
whereas mom-and-pop stores have "22-" like
http://tandy.Know-Where.com/RadioShack/cgi/site?22-F981

Search hits:

If the regional search is successful, ask for the store numbers that have the item. E.g. 9274 or 01-9274 (same thing). This number is quick and easy for the employee to give you. Then substitute that store number into any RS store map link to find the store details. E.g. http://tandy.Know-Where.com/RadioShack/cgi/site?01-9274 will tell you that store 9274 is RadioShack 01-9274, Austin-Oltorf St, 120 E Oltorf St, Austin, TX 78704, (512) 441-0617.

What else:

They will often refer to discontinued items as "disco," "devalued," or "force-feed." Sometimes they will laugh at you and say there is no way that you will find the item. Don't worry, there are plenty of friendly, helpful employees out there. In any case, ask how big their region is, to guide your search. TAKE NOTES.

Calling the store with search hit:

A regional search is based on last night's data. A search hit is actually a "maybe." Immediately call the store to confirm that their inventory shows the item is present and not defective, that they can find it, and that it actually works. Don't be insulting in the way you ask this, though. :) "Can you actually find your products? Do they really work?"--haha. Usually it is defective or they cannot find it.

What are you willing to accept? Do you care about the box, instructions, antenna, battery holders, etc.? Is a scratched display unit ok? If they have the item, ask whether they will ship the item to you. Most stores will not take credit card info over the phone and say they will only send the item to another RS. Or, you can try to get them to accept a money order and mail the item directly to you.

THE NEXT CHALLENGE: Getting your local RS to bring in a discontinued item.

Stores don't like having discontinued items in inventory. It costs them money. They are glad to send these items off to another RS. Your local RS also does NOT want this item. Most stores will say they cannot bring in discontinued items, sometimes saying it is against policy. I hear that it depends on the individual store manager. Ask nicely; it may help to promise to buy this cheap old item if he brings it in. If you find a willing store manager, give him the item number and the store number that has the item you want; he should arrange the transfer and call you when it arrives. If this works, then do them a favor: give this store your business for future purchases.

THE NUMBERS:

I called about 100 RS stores across this great country. I talked to a full spectrum of employees, from friendly and knowledgeable to misinformed to too busy. I had about 17 regional search hits for Pro-93's. Almost all were broken or missing. The first lead to pan out, very early in my search, was a store in Mississippi. By the time I found a local store willing to bring in that item, the Mississippi store had already sent it out to a store in Georgia. I was down to the last few states in the country before the second hit, in California. I immediately called my willing local store again and got the transfer started. It took 6 days to get from California to Texas.

DON'T GO THROUGH ALL THIS FOR A PRO-93.

I got the last one. :) Seriously, there may be one or two left in RS's out there, but finding my Pro-93 this way took large chunks of several days. Now that I know the fun of scanning with a $40 Pro-93, I would rather have a $150 Pro-95 with over three times the channels and saved those hours on the phone, even with free long distance. Wouldn't you rather be scanning than talking with salesmen?

I also asked for regional searches of Pro-92's, with a similar number of regional search hits. They were broken or missing, and I quickly decided that I preferred a Pro-93. As it is, I will watch whether Pro-96's will get the ability to handle Austin's APCO-25 phase II.

FRS radio deal:

Two weeks ago I also found a couple of 21-1860 FRS handhelds (also discontinued) by searching just my region. Original price $100. I already got some for $25 each in March. The price was $4 each! A much better percent discount than even a $40 Pro-93. IF you can find them, you can't beat that price for simple communication that you can hand out to friends while car-pooling, etc. Just make sure they don't walk off with your $13 set of batteries inside. :)

This information about finding discontinued RS items is based on my recent search experience. I welcome your comments,

corrections, or additions.

7885. File - Msg. Board for RS PRO Scanners

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-23 14:28:11 UTC
From: PRO-93_95@yahoogroups.com
Topic: 7603 Message: 7885

I Have created an expansion to the group, A Msg. board / Forums format, that covers all Radio Shack PRO series Scanners, and I Invite you to join us there.
Together both sites will work together.

http://rsproscanners.proboards22.com/index.cgi

Thanks,

The Group List Owners and Moderators.

What about a high pitched beep? I've recently started attempted to
follow some Mot and Erickson trunking systems, and I noticed that when
the mic is keyed I often hear only four or five high pitched beeps.
Sometimes, not often, this is preceded by a voice transmission but most
often just the beeps.

Have you guys encountered this? Do I have something set up
incorrectly, or is this perhaps what happens on a scrambled system?

Kurt

7887. Re: [PRO-93_95] My Pro-93 purchase (How to find discontinued items at Radio Shack)

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-23 17:32:46 UTC
From: Toby Zidle
Topic: 7884 Message: 7887

Great post, Griffin! It's obvious that a lot of time-consuming research went into your posting.

I, too, got my PRO-93 as a discontinued item. Given that this was several months ago, I didn't have to search quite as hard as you did, but it did require that a RS employee search the inventory of stores in the northeast Texas area. He found two hits for me to call.

At the closer store, the employee who answered the phone told me he didn't know if they actually had the radio or that it would work and that it was probably somewhere "in the attic". His annoyance made it clear that he wasn't about to take the time to look for it for me.

The second store was about 70 miles away. When I called, the employee I talked to said instantly, "Yes, we have it, but it's missing the instruction manual and the antenna." It was almost as if he had the radio in his hand. I must have hesitated for a couple of seconds because then he said, "Don't worry about that. We'll report that to headquarters as 'missing parts' and they'll ship the replacements to you immediately from Ft. Worth at no cost to you."

I asked them if they could hold the radio a day or two for me because I had to clear a few hours to drive up and get it. I did offer to provide a credit card number over the phone. That's where the store hesitated a bit. A credit card transaction costs the merchant some money. But they came up with a solution that was even better for me. They would ship the PRO-93 at no cost to my closest RS store (marked 'Hold for [name]') and I could pick it up and pay for it there in two or three days.

I immediately called my local RS store and told the manager that the radio was being shipped from the other store for me. I told them I wanted the radio held for me and would be in on that Friday to get it.

The missing manual and antenna arrived at my home before the radio did. On that Friday, I went to the local RS store, found the manager, identified myself, and told him he had a PRO-93 held for pick-up. He found it, I paid for it, and I had a great new scanner at a tremendous price (for that time).

I learned from the manager why the originating store had been so accommodating in shipping the radio to my closest store. He told me that his store was losing money on the deal. As a product transfer, his store was charged full wholesale price for the radio and the originating store received full wholesale price credit. Yet my local store was required to honor the clearance price I'd been quoted, substantially below wholesale. No wonder the originating store preferred to ship it rather

than hold it for my credit card purchase there.

My cost for the PRO-93 was $79.95. Since I'd received two $25 RS gift cards from my kids, my actual cost for the radio was $29.95 plus tax. I was a happy guy!

Incidentally, I preferred the PRO-93 over the newer PRO-95. The PRO-95 has some added bells and whistles that the PRO-93 doesn't have, but from what I can recall from postings comparing the two radios when PRO-95 was new, the consensus then was that the PRO-93 had better reception sensitivity and sound quality. All I really know is that the PRO-93 will receive systems that my older PRO-90 won't.

Finally, I was surprised to notice today that the 'PRO-93' model identification is not shown prominently on the radio case. The only place I found the model ID is on the small tag on the back with the serial number on it, in SMALL print -- under the catalog number.

The high-pitched beeps are what we listened to for years on EDACS systems, before the TrunkTrackers came out. You are NOT (repeat: NOT) trunk TRACKING. I'm quite sure you sometimes hear a trash truck immediately after a police transmission, with no reply heard to the cop. If you have not followed the manual, and pushed the Trunk button when and as instructed, please look up when and how to do so.

In other words, you are scanning at least some of the frequencies in your setup conventionally, not as EDACS. If you are not using the Starrsoft.com free programming software (WHY NOT??), it is not as easy to go back and check your work, but every EDACS system frequency must be set to ED, and the entire bank must be set to EDACS (even if you have some conventional FM or AM freqs in that bank).

Finally, you must have the frequencies in the LCN order, and you must not have the first EDACS frequency in any slot ending in 00.

when you go to cityfreq then montana the either billings or laurel there in the 800 is several trunk systems. I know the city of billings you can't trunk track becuse of it being a junkey johnson system but the others are all trunk system can some one take a peakl and see if you have an idea has to what type of sys it is.

I am using Win95 to set up the freqs, have them all in a separate bank which IS set to EDACS mode, not conventional. I DID, however, set the first freq. in the 00 slot. Do you think that's the problem?

Sprint PCS is not an 800 MHz cell phone. It is a PCS 1.8GHz cell phone. The freq is far removed from 800 trunking. 1,000MHz above to be exact. There are no reported problems with PCS and Scanners.

The problem lies in the 800 trunking talk groups and freqs.

If you mean this system, CENEX Harvest States Coop -- it looks like a simple Motorola system, with one report frequency and four rotating control channels.

As Joe stated, take it to the bank Kurt, EDACS will only find channel
one in the LCN order, not channel zero.

what about these i see it says mot in front does that mean its moterolla
858.3875 MOTOROLA INC; PPL MONTANA LLC

859.3875 MOTOROLA INC; PPL MONTANA LLC
860.3875 MOTOROLA INC; PPL MONTANA LLC

and they have several bunches of freqs through out the billings section
does that mean they have more then one system

also the one below what would it be

D COM; EMPIRE SAND AND GRAVEL CO INC; LAO 214004; JTL GROUP INC DBA
EMPIRE SAND AND GRAVEL CO
860.8375 D COM; EMPIRE SAND AND GRAVEL CO INC; LAO 214004; JTL GROUP
INC DBA EMPIRE SAND AND GRAVEL CO
860.8625 D COM; EMPIRE SAND AND GRAVEL CO INC; LAO 214004; JTL GROUP
INC DBA EMPIRE SAND AND GRAVEL CO
860.8875 D COM; EMPIRE SAND AND GRAVEL CO INC; LAO 214004; JTL GROUP
INC DBA EMPIRE SAND AND GRAVEL CO

7899. Initializing problem

Yahoo group: PRO-93_95 (2003)
Date: Unknown date
From: socalchevyguy@aol.com
Topic: 7899 Message: 7899

I just turned on my 95 and it said Initializing, please wait. The thing is i didnt push the buttons to initialize it. Now all channels are programmed to 4194.30375 in EDACS mode with delay, lockout and att turned on. I've lost everything... Anyone know why it initialized on its own?

7900. Re: Initializing problem

Are you running an in car charger also, part 273-1810? I noticed that when i have the dc charger plugged in, the unit will intermittently turn off and on. No loose connections are apparant.

This can be caused by several things... If you are powering the radio in the car by 12 volt adaptor, its most likely that it got power, started to boot, lost power and went off for an instant, and started up again... This is normally caused by leaving the cords plugged in all the time and engaging the starter of the car... The drop in voltage acts similar to dead batteries in the radio when the power drops below the radios requirements to run... On, to off, and back on is not good on it... The other possibility is that someone set up the "C" tip instead of the better fitting "B" plug...
The other thing is that you may have pressed a sequence of buttons that reset the radio...
Another way is if you were programming and failed to get the entire sequence in before pulling the program cord out of the side... This will throw a radio into a reset...

More than likely it is the latest Chinese satellite that was just
launched. It must be randomly selecting radio equipment and causing
havoc.

Won't cause any harm if its not. When entering the freqs, one of them should have the control channel noise. Mot and EDACS are distinctly different. EDACS should have 5 beeps after a conversation until you get it set up correctly. If you do not hear those beeps then its likely Mot. Remember, EDACS must start in the 01 channel of a bank, not the 00 channel. Starting Mot in this fashion won't bother it, so enter the frequencies as listed then all you need do is change the mode in each freq and the bank.

This systems frequencies are not listed on your city/freq page. CENEX
Harvest States Coop. The freqs are 856.2875 857.2875 858.2875
859.2875 860.2875.

Those you have below are Motorola and are for the city of Billings.
EF Johnson freqs are LTR and can only be scanned conventional with
this radio. BTW LTR control sounds different than the other two
systems mentioned previously.

Frank.

From: fmon1
Topic: 7864 Message: 7907

You can try both MOT and EDACS, though as stated previously, start
with channel 01 and enter the freqs in the order listed. If you start
in channel 00, EDACS will not function.

7908. RE: [PRO-93_95] Re: PRO-93 Clicking Noise

Yahoo group: PRO-93_95 (2003)
Date: 2003-11-25 02:21:32 UTC
From: Zach Samson
Topic: 7864 Message: 7908

I have a pro-93 as well. I am on verizon wireless and I have a Motorola V120E. No problems with my scanner, only if I am on the phone right next to my scanner. Actually If you have the phone and the scanner right next to each other and someone calls your phone, the scanner will start to buzz and get interference, then about 3 seconds later the phone rings. the scanner actually lets you know a few seconds before hand when a call is coming in. :)

Subject: [PRO-93_95] Re: PRO-93 Clicking Noise

You guys were right! I tried it with the antenna off in the middle of my backyard.. didnt get anything for a good hour.. came inside the house, clicking all over. Took it on a drive to Los Angeles, clicking occaisionally on the way... finally figured out what it was, my new cell phone :X I switched service a bit ago and didn't think it had anything to do with it, but then I realized it started around the same time.. I used to have a Nokia 5190 which would only make noise I could hear on the scanner during a call or when it was ringing, and only in very close proximity.. this new phone (Motorola T120, free w/at&t) makes noise in my scanner clear across the room, and even when there isnt a call or the phone is ringing. Doh! Anyone know of a phone that works well with AT&T that wouldnt have this problem, as I usually carry the scanner around with me and have to keep the phone near as well, almost never seperate the two, thats why I thought something was going out inside :O

-Gabe

P.S. thanks for the help :D

Are you running an in car charger also, part 273-1810? I noticed that when i have the dc charger plugged in, the unit will intermittently turn off and on. No loose connections are apparant.

I work for a 911 PSAP and we dispatch on the 800 mhz system near Charlotte, NC. One of our problems has been with Nextel cellphones using the 'push to talk' when trying to transmit on the 800 mhz system. The 'push to talk' cancels out our transmission in the communications center if they are used at the same time. There has been other problems with Nextels effecting the 800 mhz system, so sometimes, it maybe someone close to your scanner with a 'push to talk' that is causing interference.

It is very unlikely that your Nextel PTT is going to effect the 800 trunking system in CLT, even working at the PSAP. Nextel runs at 1.9Ghz. What is is most likely doing is getting into your tone-remote on the console as a result of insufficient shielding on the audio lines from the mic to the console or the audio line from the console to the tone-remote receiver at the actual transceiver. I'd guess that you're probably running a Centracom system.

As for nextel getting into a scanner, it is most likely going to be overloading the front-end of the scanner or getting directly into the audio chain (like it is most likely doing on your dispatch console).

BTW: Used to live on Lake Norman. I *really* miss it, although you can keep the Huntersville Cowboys...er...police. What a hick mentality they had!

This is sitting at the comm center and another dispatcher keying up on the deparmental Nextel. The radios are wired on a remote to an antenna to the roof, and they believe this is where the problem is steming from, but not really sure. It will cancel out a transmission from our consoles.

afaik Nextel is 800 mhz.

The only problems in our dispatch are from people setting GSM (and probably other) phones on the desk next to the microphone jack, but of course my scanner doesn't like that either. Or my computer monitor ;) I remember at work some guys with Nextels would get into the computer speakers from 10' away. Never have any problems with one 800 getting into another 800 tho. Commercial radios should be pretty tight.

John,
Although I don't really have much of a say in this, but maybe you do... If you guys are on a 800 Mhz system, why don't you get rid of Nextel, and just give the department radio's with their own talkgroup. If I were you, I would talk to whoever is in charge and recommend that to them. What type of system do you use? Motorola, EDACS, etc... Also what city or town are you dispatching from?

I am at North Mecklenburg Dispatch (combination of Cornelius/Huntersville/Davidson, and Davidson College). We would love to get rid of the Nextel, but we have the one with only the 'PPT' function on it. We are a Motorola system being on the North Tower. It is simulcast on the main tower and the system is owned by Charlotte/Mecklenburg Police (NC). We can't change a lot at this time. We applied to Homeland Security for funds to build our own radio system, which would be shared with NC State Patrol, County Fire, and local rescue squads. The next county up is also attempting to go to 800, and we are hoping to share on their tower as well. I have all of Mecklenburg County talk groups and frequencies on my website under links if anyone ever needs them.

I know this probably didn't answer your question, but we use wireless remote headsets, which are around the Medical channels (463.150 range) and I have my headset being picked up by the Pro-95. I can change channels on my headset, which seems to correct that problem.

The Nextel is a easy way of getting information for administration (when they hear sirens on the radio, but have no idea of what is going on), for officers who don't know where to go, or for anyone who wants to flirt with the badge bunny on the rotation. They have gotten it embedded as a tool, but most of us hate it and wish they would use the radio as it should be used.

Sorry for putting so much of my .02.

I'm willing to bet that when you hit the PTT on your console, it isn't wired to the PTT on the Spectra (most likely radio) that is connected to the antenna. You're 99% certainty running some type of "remote" as in - the RADIO is remoted, even if only 20-300ft, the RADIO isn't sitting at the dispatch console.

John

Ah, so you know first hand how much of a "cowboy" cop system Huntersville is! ;-) I77-27 - I77-28... Not much territory to cover but, I'm sure that the folks at "Lakeside" and "The Irish Cue" keep you busy.

That is your problem. Your nextel phone is killing the front-end receiver on the wireless headset system. When will people realize that wireless is NOT the answer to EVERY problem? I mean, lets get serious. This is a PSAP, not a McDonalds. You're not running around to keep the fries from burning. You're at your console. Just how much of an annoyance (read: keep you from doing your job as a dispatcher) is a wire from your headset to the console?

If you have anything to do with Mec county, you're going to be a Motorola system. CLT runs (or at least, they RAN) Motorola Sabers.

Nextel is Golden to them all because it is NOT RECORDED and they all know that the public service (telephone) and the radio comms are recorded. I personally think that having Nextel in the PSAP is a problem because of the "distraction factor"...

Hope all is well in NC and the next time you need to do a radio check and pass some random audio, do me a favor... Say the following:

"Charlotte Police Officer David Harrison Hice, You are gone but not forgotten. Semper Fi!"

David was my roommate for several years. He left us a few years ago. It was the longest funeral procession I've ever seen. From I77-5 to I77-23. They had 77 closed down from Monroe to the SC border and it was PACKED 5 - 23 with police cars in the procession. An amazing site.

Semper Fi and 73 de John - K4WTF (former KC4KGU)

I have a pro-93 as well. I am on verizon wireless and I have a Motorola V120E. No problems with my scanner, only if I am on the phone right next to my scanner. Actually If you have the phone and the scanner right next to each other and someone calls your phone, the scanner will start to buzz and get interference, then about 3 seconds later the phone rings. the scanner actually lets you know a few seconds before hand when a call is coming in. :)

Subject: [PRO-93_95] Re: PRO-93 Clicking Noise

You guys were right! I tried it with the antenna off in the middle of my backyard.. didnt get anything for a good hour.. came inside the house, clicking all over. Took it on a drive to Los Angeles, clicking occaisionally on the way... finally figured out what it was, my new cell phone :X I switched service a bit ago and didn't think it had anything to do with it, but then I realized it started around the same time.. I used to have a Nokia 5190 which would only make noise I could hear on the scanner during a call or when it was ringing, and only in very close proximity.. this new phone (Motorola T120, free w/at&t) makes noise in my scanner clear across the room, and even when there isnt a call or the phone is ringing. Doh! Anyone know of a phone that works well with AT&T that wouldnt have this problem, as I usually carry the scanner around with me and have to keep the phone near as well, almost never seperate the two, thats why I thought something was going out inside :O

-Gabe

P.S. thanks for the help :D

Charlotte, NC. One of our problems has been with Nextel cellphones using
the 'push to talk' when trying to transmit on the 800 mhz system. The 'push
to talk' cancels out our transmission in the communications center if they
are used at the same time. There has been other problems with Nextels
effecting the 800 mhz system, so sometimes, it maybe someone close to your
scanner with a 'push to talk' that is causing interference.

1.9GHz ? Why then does Nextel Hold Lic for 1million 800 MHz freqs across US. They have bumped every 800 system in this area to get certain freqs. All MOT systems in this area have had to move to other freqs because of the freq eating giant.

>Nextel runs at 1.9Ghz.

I'm sorry, John, but you are incorrect here.

NexTEL's system is 800 MHz, just like many PS Trunking systems. This has been an issue now for several years, as NexTEL will use several hundred 800 MHz frequencies, and often some close enough to the trunking systems to cause interference. There are many articles on the web about NexTEL's system degrading the quality of service to Police and Fire department's around the US.

In fact, if you look up NexTEL in the FCC Database, you'll see that they are licensed under "YX" which is "SMR, 806-821/851-866 MHz, Trunked", rather then "CL" (Cellular).

The bands for the various cell carriers are as follows:
NexTEL: 800 Mhz (Mostly near PSAP Frequencies)
Verizon: 800 MHz (Traditional Cell Phone Frequencies)
AT&T Digital CDMA: 800 MHz (Traditional Cell Phone Frequencies)
AT&T, T-Moble GSM: 1.9 GHz
Sprint PCS: 1.9 GHz

Subject: RE: RE: [PRO-93_95] Cellphones and 800 mhz.

I am at North Mecklenburg Dispatch (combination of Cornelius/Huntersville/Davidson, and Davidson College). We would love to get rid of the Nextel, but we have the one with only the 'PPT' function on it. We are a Motorola system being on the North Tower. It is simulcast on the main tower and the system is owned by Charlotte/Mecklenburg Police (NC). We can't change a lot at this time. We applied to Homeland Security for funds to build our own radio system, which would be shared with NC State Patrol, County Fire, and local rescue squads. The next county up is also attempting to go to 800, and we are hoping to share on their tower as well. I have all of Mecklenburg County talk groups and frequencies on my website under links if anyone ever needs them.

I know this probably didn't answer your question, but we use wireless remote headsets, which are around the Medical channels (463.150 range) and I have my headset being picked up by the Pro-95. I can change channels on my headset, which seems to correct that problem.

The Nextel is a easy way of getting information for administration (when they hear sirens on the radio, but have no idea of what is going on), for officers who don't know where to go, or for anyone who wants to flirt with the badge bunny on the rotation. They have gotten it embedded as a tool, but most of us hate it and wish they would use the radio as it should be used.

Sorry for putting so much of my .02.

With regard to your comment,"What a hick mentality
they had!"

I've noticed that can be said for just about anyone
whose hometown happens to be Charlotte, or the
immediate surrounding area. (I've come to this after
spending more than 2 yaers down here as a transplant
from Ohio)

It does double you capture area. If in a location where outside ant is not possible then some scannist use this method. Make your own from extra ducks around the house. See Portable or Base Gold Post at this site.

I have played with that using a preamp and a number of different antennas. It seems to work. I have tried both matched (the same kind of antenna) and antennas for different bands

Here is a picture of my setup

>Nextel runs at 1.9Ghz.

I'm sorry, John, but you are incorrect here.

NexTEL's system is 800 MHz, just like many PS Trunking systems. This has been an issue now for several years, as NexTEL will use several hundred 800 MHz frequencies, and often some close enough to the trunking systems to cause interference. There are many articles on the web about NexTEL's system degrading the quality of service to Police and Fire department's around the US.

In fact, if you look up NexTEL in the FCC Database, you'll see that they are licensed under "YX" which is "SMR, 806-821/851-866 MHz, Trunked", rather then "CL" (Cellular).

The bands for the various cell carriers are as follows:
NexTEL: 800 Mhz (Mostly near PSAP Frequencies)
Verizon: 800 MHz (Traditional Cell Phone Frequencies)
AT&T Digital CDMA: 800 MHz (Traditional Cell Phone Frequencies)
AT&T, T-Moble GSM: 1.9 GHz
Sprint PCS: 1.9 GHz

I imagine there is interaction between them in that configuration.
They don't have to be UP to be vertical.
Doing it this way only uses standard tee and right angle connectors.

From: Dave
Topic: 7946 Message: 7946

I am using Win 93 and a pro 93
I need to enter this fleet map

Block 0 = S4, Block 1 = S0, Block 2 = S12, Block 4 = S13

My problem is that block 1 calls for "S0" and win 93 starts at S1

what can I do

System: New York, City of
County: New York
Type: IIi
Fleet Map: Block 0 = S4, Block 1 = S0, Block 2 = S12, Block 4 = S13
Use: O.E.M., NYC Corrections, NYC Sheriff, Parks, Animal Control,
and many others
Frequencies:
856.4375 857.4375 858.4375 859.4375
860.4375
856.7625 857.7625 858.7625 859.7625
860.7625
856.9375 857.9375 858.9375 859.9375
860.9375

I saw something a while back about a 93 being sent for service and returned with 700 more channels(making it a 95)Does anyone have any info on this topic??? If its just a matter of changing the eprom does anyone have the correct part number???

7953. Pro95 and Win95

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-02 01:01:42 UTC
From: tfred2
Topic: 7953 Message: 7953

This is my first post to this group. I am trying to use Win95 with my Pro95. I have tried the R/S 20-289 cable with no success. I also have the "purple cable" and when it is plugged into the PC/IF jack on the Pro95 the "clone mode" message appears [this message did not appear with the R/S cable]. Nevertheless, I cannot download from the radio to Win95. I get "cannot open ComX" messages, where X is 1 or 2 or whatever. There is but one unused connector on my PC that is compatible with the 9 pin cable connector. Any suggestions or ideas what I am doing wrong or not doing to enable the radio to upload data to Win95? I don't want to try downloading to the radio until I am sure things are working correctly. I don't want to overwrite the current data in the Pro95. Thanks.

>

I'm guessing there is something locking the port... Make sure you do not have any hot sync programs installed or anything that will lock the com ports looking for a PDA to be set in the cradle... You should be able to download from the scanner if the port is available... If you look into the control panel of Windows in the system area, you should see what ports are installed... If they exist, you have a software issue within Winders thats locking access to the port and also Win9x to program your radio... Quickbooks also had issues with open ports... Most cases, the com port will be set on 1 unless you have personally changed it... The new Windows modems I have seen on Com 3 to 5... If you have a PDA on your computer, that would explain it really quick...

Don't think so... The 93's were able to get the 1.03 firmware update in the Ft Worth repair center... The 95 is still at 1.00... An authorized repair by the Shack would entail replacement parts to be exact part numbers for that item... If the part is no longer stocked or manufactured, the unit would be sent back to the store as "unrepaired" or "no parts"... Then the store would have to work out something with the customer if it under warranty to send the defective unit in with the service center repair slip showing no parts stocked or non serviceable... Then the store could receive credit for that radio in exchange for giving a new radio to the customer... The store would get credit at the current cost, most likely discounted severly... If its out of warranty, its at the discression of the store to do anything, remember they only have a 30 day return policy at store level... Most likely they will not budge on a unit over a year old for the simple reason that the store must provide a proof of purchase to get any credit at all... They may discount a new radio to help cover the cost of a new one... Again, its totally up to the store... And, it would be probably in your best interest to goto the store you purchased it from for problems...

It is possible that the circuit board or main board for the PRO-93 could have been replaced with a PRO-95 model. Stranger things have happened. I recently saw a Sprint phone come back from RadioShack repair with Verizon programming on it. The customer and the Sprint store down the hall were very concerned. Every call he made was considered roaming, and required an area code (even local calls). Upon checking his bill, Sprint discovered that he wasn't being charged for any calls. The only reason the customer has a complaint was because his voice mail would say Verizon, and he couldn't access it. I haven't found out yet what we did for this customer... It happened about two weeks ago, and I completely forgot about it until I saw this post.

7959. Board Newbie w/ possible PRO-95 problem

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-02 16:33:33 UTC
From: dragline_one
Topic: 7959 Message: 7959

Hi, I'm new to this board but not new to scanning. I just purchased a PRO-95 when they went on sale for $150. Overall, I'm pleased with the scanner after a few days, but it is doing something I don't understand. Maybe I'm going something wrong.
I have Banks 0, 1, and 2 programmed with ~20 conventional freqencies apiece. I have an EDACS trunked system programmed into Bank 9. Bank 9 is also running in "open" mode (no ID list, all transmissions heard). I'll be listening to Bank 2 and Bank 9 and everything is fine. I'll hit the "zero" button to listen to Bank 0 also. The "0" appears and Bank 0 is scanning normally. But, the next time through Bank 9, it loses the trunking and locks onto the control frequency with its annoying sound. Occasionally Bank 0 will come on and everything is fine, except that when I hit the "zero" button again to disable Bank 0, the same thing happens...Bank 9 loses its trunking and locks on the control channel. The only way I've found to restore Bank 9 to normal trunking operation after this happens is to turn the unit off and then back on again.
Any suggestions?
Thanks - Dragline

Have had the same problem with mine. Mine does it for the banks that
I have programmed for MOT (moterola). Turn it off, then back on and
all is fine. So far, haven't seen any fix for it. Must be one of
those "bugs" that never got worked out from the factory.

I am using Win 93 and a pro 93
I need to enter this fleet map

Block 0 = S4, Block 1 = S0, Block 2 = S12, Block 4 = S13

My problem is that block 1 calls for "S0" and win 93 starts at S1

I never found a problem as you discribe, but the Pro-92, for some, had
an issue with a trunked system in bank 9.

i just got my pro-95 a few weeks ago. i also have a bc780-xlt.
My question is the 95 capable of finding or scanning of "i-calls"
like 705751 that i get on my bc780xlt while trunking?
if so how to program.

Try hitting pgm then trunk then scan. this well fix your problem and

is better than turning your scanner off and on.

In Win95 try going to Configuration and then serial
port and try switching it to port "1" or "2" sometimes
the port will be 3 or 4. but try that.

To my knowledge this is a bug in the scanner's software (no fix that I know of.) I've just learned to live with listening to either the trunked system or conventional channels. Its really not that big of a deal, b/c I would miss stuff if I tried to scan both anyways.

Wouldn't really do you much good, since the data stream is encrypted.

>Will the 2052 commands work with PRO-95?

No. Programming the 95 isn't done by commands. A full memory map is
uploaded to the scanner. And it's encrypted.

My PRO93 has the same bug, i just press the "SCAN" button when it
reverts back to the data freqy, also, if you tend to turn on and off
a bank when there is no audio present from any freqy , the bank
turnsoff properly and does NOT revert back to the data channel of
that bank.....

7973. A "frequency" item for our scanners offered on eBay

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-06 02:42:34 UTC
From: Don Starr
Topic: 7973 Message: 7973

I've heard about an item offered on eBay, that supposedly "unlocks" frequencies for the PRO-92/2067, PRO-93/2053, and PRO-95 scanners. Here's a sample item:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=40979&item=3063702391

(If that wraps, just enter 3063702391 into the search box at www.ebay.com).

A small amount of these seem to have been sold (as of this writing, there have been 9 sold since Monday Dec 2).

A few people have asked me if this might be one or more of my Win9x apps being sold by someone.

No, that's not what it is. It appears to be legit, and the seller not violating any [of my] copyrights or license agreements, but I still wouldn't spend the money on it.

A friend gave me a description of what's being offered:

A ZIP file containing 151 (yes, one hundred fifty one) .P95 files for use with my Win95 app, along with three other files (a "user guide", "user agreement", and what seem to be instructions for cobbling together an antenna). Each of the P95 files contains frequencies from the "extra ranges" available in Win95. For example, a bank in a given file might contain 100 sequential frequencies, in 5 kHz steps, from 175.000 to 179.995 MHz.

It looks as if someone used Microsoft Excel's "fill down" feature (i.e. enter 175.000 and 175.005 in cells A1 and A2, then select those two and drag down to cell A100 - you now have 100 cells containing 175.000 - 175.495). Format as "number, 5 decimal places", and copy and paste those 100 cells to a bank in Win95.

Or, the easier method to get [nearly] the same functionality: For each of the extra ranges offered by Win95, enter the _first_ frequency in that range into a channel. Upload to the scanner. Manually select one of the channels and press FUNC TUNE. The radio will happily search through all of the frequencies in the extra range. Once you hit the end of the extra range and get to a "valid" range, the scanner will stop searching. You have to repeat the manual selection + FUNC TUNE to search again. (At least, that was my experience on my PRO-95).

(The above also applies to Win93 and the PRO-93/2053).

The "user guide" specifically instructs the buyer to use the files with my Win95 app.

The auction pages say that it should work with the PRO-92 and PRO-2067. Absolutely not. Those scanners perform checks that the 93/95 do not, and will NOT allow these extra frequencies to work.

Caveat emptor.

-Don

LOL!! what a scam :D

7975. Diamond Scanner Antenna : RH77CA

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-06 04:50:48 UTC
From: pro95scannerman
Topic: 7975 Message: 7975

Has anyone had any experience with Diamond Scanner Antennas? I have found one that strikes my interest.

Advertised as...
"The Diamond RH77CA is an HT antenna for transmit on 2 meters and 440 MHz. It is a 1/4 wave on 2 meters and a 1/2 wave on 440. It can additionally receive these bands: 120, 150, 300, 450, 800 and 900 MHz. As a result of this exceptional coverage, we actually sell more of these antennas to scanner listeners than hams! This thin, flexible, black antenna is 15 inches tall. Gain is a 6 dBi and it can handle up to 10 watts if used for transmitting. The antenna terminates to a 50 ohm BNC."

Looks like a possible choice for $25.00.

Any comments?

An excellent multi-band antenna, especially for its' designed VHF-high and UHF bands. Works very well on 800 mHz, and even gives half-way decent performance on VHF low (considering how terribly short it really is for that band). I have several of them, and use them all the time. As long as you don't mind an occasional tickle to your armpit if you're wearing a handheld on your belt!

A pretty comparable looking and performing antenna is the "CC Super Gainer" antenna, at http://www.ccrane.com/ccsuper_gainer.asp Similar but a tad more flexible (but not "floppy"). Disclaimer: I worked for C Crane until about 5 years ago, but have no interest in the place. They have some good products and give really REALLY excellent customer service. (Now if they only treated their employees as well as they treat their customers...)

Harry

7977. Using R2 cable to program Pro 95

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-06 15:53:56 UTC
From: n1wcl
Topic: 7977 Message: 7977

Hello,
RS has the Pro 95 on sale for 149.95, so I decided to buy one.
I had a Pro 92 a couple years ago, I liked that radio. But being a
radio junkie and "fickle" at times I either traded or sold it!
But now I have the Pro 95 which I plan on "keeping"
Can I use a Icom R2 cable to program the Pro 95. I guess I could
just try it, but I don't want to damage my new toy!

Thanks N1WCL

I have one too and it works very well for vhf/uhf. There is no improvement on 800, but that's not what it's designed for. It's so long and geeky that I very rarely use it. Can't really wear it when its on there :) Good for camping and tabletop use on the 2nd floor in lieu of an outside antenna.

7987. RS 800 MHz Antenna

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-07 23:42:06 UTC
From: Greg Davis
Topic: 7987 Message: 7987

I purchased the RS 800 MHz scanner antenna (20-283) so that I could listen to the behind-the-scenes comms during the Steeler's games at Heinz Field (whole lot of sick people throwing up during those games.) As the crow flies I'm about 7-8 miles from the stadium. The RS antenna package says the it "nearly doubles the signals available..." but that's not true for me. During today's game I did a side-by-side comparison of the 800 MHz and the standard rubber ducks that came with my radios. I used my Pro-93 and Pro-95. Both were programmed to the same trunked control channels for the stadium. I first placed the 800 MHz scanner on the 93 and the stock rubber duck on the 95. Then I switched the antennas on the two radios. In both cases the stock rubber duck received transmissions that the 800 MHz antenna didn't pick up. Even when the 800 MHz antenna did receive a transmission it was mostly scratchy while the stock duck was mostly clear. Sounds like I may have a bad antenna. But, before I return it to RS I wanted to ask if anyone else has experienced a similar situation with the RS 800 MHz antenna.
Thanks for the comments in advance.
Greg

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-08 00:43:07 UTC
From: A. De La Garza Jr.
Topic: 7990 Message: 7991

Zeromatic Tuning Contents

Whenever this feature is turned on, Zeromatic ON
briefly appears then z appears at the first digit of
the second line and the scanner will automatically
tune to the correct center frequency (or the step
increment closest to the correct center frequency).
When searching with Zeromatic off, z disappears and
the scanner will unmute faster on a detected signal
but the frequency may not be the correct center
frequency. Zeromatic functions only in search banks
SR2, SR3, SR4 and SR5.

To turn zeromatic tuning on, press FUNC then 0 when
searching.

To turn zeromatic tuning off, press FUNC then 0 when
searching.

7995. Discone Antenna

Date: 2003-12-08 03:14:34 UTC
From: Scott
Topic: 7995 Message: 7995

Hello group....
I have a question about a Discone Antenna... (www.scannermaster.com)
I want to place it in one of two spots.
attic or a craw space..
This will depend on how tall and wide this is... If it is over 36"
tall, then it has to go in attic... If it under 36" then it can go
in the craw space..
Will someone who knows this particular antenna tell me the specifics
on it... Will it will work good in the attic/craw space...?? or do
you have a better choice for my conditions....

Thanks for any input

Scott D

Scott,

Depends...where I live "crawl space" usually means under the house. That would probably be a bad thing. Attic invariably means up. That sounds like a good thing. Height is good, as long as you are not beneath high voltage power lines, low flying planes, etc.

Go up. Be aware that long runs of coax cost you signal...or cost you money for coax cable that is more efficient. Nothing is free.

And stay away from things like metal foil backing on Fiberglas insulation that could block signals from the sides of the antenna. Also avoid putting it near things that cause interference. For instance, I had a garage door opener's receiver on the garage ceiling that was radiating badly in and around frequencies I cared about.

Good luck & enjoy.

7997. Pro-95 Schematic

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-08 04:28:29 UTC
From: pro95scannerman
Topic: 7997 Message: 7997

Does anyone know where the Pro-95 schematic can be found? I would like to see the general make up of this little radio. There is a part list out there. These days a schematic only shows where the pcb routes and the mysterious ics inside. SMD make a radio like this unserviceable. Throw away the guts and replace and refurb the case. The ics and programmed devices control all but the audio amplifier which I expect is an ic. That's reality now but I'm still curious. This little radio works so well I do not dare to open the case. Reminds me of a laptop computer that receives and scans. The technology is grand. I expect that the Pro-96 is super slick. But at $500.00 a pop, well I guess they will have to compomise the mega profits in time. Like Mick Jagger said, "Time is on my side".

Kudos to GRE and the Pro-95! Buy one now.

P.S. Many thanks to Don Starr for Win95.

Scott,
You must live in one of those deed restricted homes that allows nothing outside your house but mowed grass. Don't dispare..many do. You may want to investigate a Yagi design if you are scanning a specific wavelength, i.e. 800mhz. They are small compared to a discone type but do not offer a wide sprectrum of response. If you can mount an antenna mast on the outside of the house..Scan on. Line of sight. The horizon can be your friend. :)

(Sometimes bigger is better!)

From: Robert R.
Topic: 7995 Message: 8000

It basically covers aircraft to 1300 mhz.
If you add a top resonator it will cover down to 25 mhz.
This antenna has no gain. Trade off for the bandwidth.
Now, in turn for the bandwidth also comes intermodulation.
Some radio's I've had using the discone antenna experience front end
overload.
From FM stations and TV stations especially.

I perfer to use an antenna that is 5 or 6 band with some gain.
I have NO overload problems.
I am using the bottom (or ground) of a discone and instead of a top disc, I
have retapped it to
thread on a MON-58 antenna by antenna specialists.

I live in Phoenix metro by the way.
Where are you?

8001. Re: RS 800 MHz Antenna

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-08 19:07:46 UTC
From: hamrad45
Topic: 7987 Message: 8001

Here is my observations and I am just another scanner listener so take it with a grain of salt.

I have tried about 30 or 40 different antennas with my scanners both outside(roof mount) and on a HT. I have found that each antenna (not each model but each individual antenna) has different characteristics. And these characteristics vary with conditions. Especially with HT's rubber duck type antennas. When comparing antennas on an HT, I a noticed that any slight movement of the radio when changing antennas will give different results. This is really noticable with weak stations. Just moving away or closer to the radio can effect the receptions or being on one side or the other.

I too have the RS 800 MHz antenna and only noticed slight improvement over the stock antenna but sometimes that was the difference between hearing a station and not hearing a station. My guess it may be that it is really hard to get much gain out any antenna at that high a frequency.

One other observation. The best overall antenna for my base stations is the RS $14.95 now $21.95 model 20-176. I have paid as much at $100 for other universal antennas but none have beat this one (excluding directional or antenna cut for specific frequencies). So go figure.

Bottomline, I wouldn't expect "double the signals available" with any antenna over the stock antenna for these radios. My guess is that since these radios where made mainly to monitor Trucking frequencies which are mostly up around 800 to 900 Mhz, that the stock antenna was tuned for these frequencies already and were tuned to match the radios. I would suggest you experiment some more but don't expect any radical differences. If you don't want to pay for the limited improvement, return it. I wouldn't suggest you swap it for another one.

Only my observations,

Tom

Try turning on the Global Attentuator (make sure there is a small "a" in the upper LCD line).

This made a huge difference for me when I used the 800mhz antenna... signal was scratchy at first, turned on the attentuator and the signal was crystal clear.

When I'm on the top floor of my house or outside, I like the telescoping handheld antenna RS sells. When I'm inside, I use a homemande 2-meter ground plane I bought from someone a while ago, which works great on the lower frequencies but not so good on 800 MHz.

The reason for that is you are near a cell phone or Nextel antenna site. The high energy fields around these sites overload the scanner's front end. Turning on the attenuator cuts down on that high radio frequency overload, allowing the scanner to receive better.

It has nothing to do with the antenna discussion.

No antennas are within a 5 mile radius of the area where the attentuator helps rectify the scratchy radio traffic.

Something is causing the overload. Some cell phone antenna sites have
been cleverly concealed because of public opinion - some are even
hidden in church belfreys!
An attenuator appears to improve reception by decreasing the overload
or attenuating unwanted signals.

Well thanks for all the responses..

First let me tell you where I live... I live in NY in the country...about 75 miles or so north of NYC..
It is not so much a neighborhood ordinance that keeps me from putting it up outside, but rather the wife and MOTHER-IN-LAW.... "It is ugly".. So I think I'd rather put one in the attic...(If you get my drift)... I have my SW radio antenna's up there so what is one more???

Maybe I'm looking at the wrong kind of antenna... I think I'd primarily be listening to area police/fire/ambulance etc. as well as distant from time to time... I think it would be fun to listen in on NYC or maybe Albany... So I want to get a good antenna to do that...
As I pointed out before... I am limited on vertical... It must be 36" or less to be able to fit up there...

Once again.. Thanks so very much

Scott

How about a "Ventenna"? www.ventenna.com
It fits over a vent on top of your house.

The VT-15S is for scanner use; though it says its range is 140-512 MHz it might work for 800 as a gain antenna as well.
(I don't have one so I can't say for sure).

8009. Hello, all. New ro PRO-95 Group

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-11 17:55:14 UTC
From: slice_ng
Topic: 8009 Message: 8009

Hey guys, new to the group.

I picked my PRO-95 up on monday and was able to get the $149 deal. I've wanted to get into radio scanning for along time but just never go around to it. Last weekend there was some major police activity in my 'hood and I had no idea what was going on. So that locked it for finaly picking up the scanner.

I live in the West Palm area of South FL and monitor the county's 800MHz Type II trunked system. Still waiting for the cable I bought of e-bay to arive. I don't want to enter all thoses alpha-tags in by hand!!

I read some reviews of the Pro-95 before I went to pick it up and found them all to be glowing. I'm really happy with it quality, speed, program ease, etc. My only complaint is the houseing feels like cheap plastic. I'm afraid if the thing falls off the desk or my belt it might crack. Other then that the "guts" seem top notch.

As I learn more about scanning and my local area (via radio) I might invest in a much more expensive scanner with the new digital stuff. But for now this PRO-95 seems to have been a great buy to get into scanning without going broke or buying stuff I would not have needed.

Dustin

8015. New Jersey .P95 File

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-11 20:27:48 UTC
From: Richard Taft
Topic: 8015 Message: 8015

Looking to obtain a recent copy of a p95 file that covers New Jersey State trucked Freq. I'm looking for state PD, Road Dep, Emergency Services. Basically everything trucked in NJ... If all you have is one service like State PD North, that would be great since I can combine all that I get into one file. I would then be happy to post it here so that everyone can share.

From: slice_ng
Topic: 8016 Message: 8016

At home and work I like to leave my PRO-95 plugged into the AC adapter. Is it safe to leave normal AA batteries (useing the normal battery holder) in the scanner when pluged into AC power, or should I remove the batteries when the AC is plugged in?

Thanks.

As long as they are in the black holder, there is no chance of charging any batteries inside it... The black holder is lacking the extra tab to connect to power... And, as long as your batteries are good and fresh, you shouldn't have to worry about any leakage issues from batteries inside the holder... If you leave the alkaline batteries in place for more than 20 days, it would be a good idea to remove them or at least check them periodically... Just never put anything but rechargeables in the yellow holder... That makes a big mess when they blow and usually take out the radio...

I NEVER use the AC, both for safety and convenience. I have extra batteries and a charger. I alternate batteries every day. My PRO-95 draws about 90mA, so a set of 2100NiMH batteries lasts about 23 hours with the scanner on all the time.
Walmart has a good battery kit in their photo dept. It has a charger that changes to trickle, 4-2000 NiMH batteries and a 12 volt cord so you can use the charger in your car. All for $16.82.

No problem with my scanners at the airport... security doesn't even look twice at them. Run them through the X-ray, and that'll be all you have to do, unless they randomly pull you for a wipe down. In any case, they have no problem with them

Here is what I took through security two weeks ago:
Pro 95
Pro 79
Icom T7H Dual Band Ham Radio
Laptop
Cell phone
iPod
other misc. electronics

I had no problems at all.

Thanks for the website link, Wes! I noticed that Honolulu has an EDACS/Provoice. Oklahoma City is getting one of those and I have been told that the Pro-95 will not be able to receive it. Maybe a different type. I am interested in listening to just about anything if it involves lights and sirens. Could you post or e-mail me your P93 file? I could change it over to a P95 file. I don't have much experience or success in programing and EDACS system. Thanks again for your help.

Security may not be such a issue, what airports are you going through? They will let you take it but you might get delayed at the security checkpoints. If they have a problem ask for the supervisor in charge and make sure you do it nicely. If you treat people nice and they will treat you nice too. I have taken a camera, cd player, my pro-93 on a plane. They questioned me about the scanner, just tell them you use for it weather radio or something.

I figure the toughest might be LAX. Other than that Will Rogers OKC, Phoenix, Honolulu and Kansas City. We will be leaving on Wednesday, and I don't think I will have the time to program my scanner. If I can't find a P9X file, I may not take my scanner with me. So it might be a moot point. Thanks to everybody with their input. I certainly have learned a lot.

From: Don
Topic: 8037 Message: 8037

GE:

I have been a Scanner Listner for more than 30 years and I would think that most of you have other Radio related hobbies.....CBing, FSR, SWL ..etc....but those that have never thought about trying Ham Radio I would strongly suggest adding it to your other Radio activities! I have also been a Ham for a number of years and again I think if you like SWLing then you will love Ham Radio and the activities it will provide....all great hobbies!

We have a group that is dedicated to help those interested in becoming Hams....so much so we have FREE give aways from time to time to try to HELP those out wanting to advance in Ham Radio. Here is some info:

- About 450 members and growing!
- We have 5 moderators to keep members, message posts motivated but also keep those that don't belong with bad taste messages, links or comments out.
- Again...we have FREE giveways in our "Polls" area ...currently we have a couple sets of code CW tapes to give away and about 4 New Ham CDs to give away (these Polls are up on 12/15/03..so put your name in the hat!).
- We try to motivate people and help them pass and find a place to take there first Ham Radio VE test exam....also we like to post testing dates of members.
- Sunday Nights at 8pm CST or 1:00UTC is our "Chat Night" and we have from 7 to 14 members usually check in.
- Every other Sunday Night at 8pm CST or 1:00UTC is our "EchoLink Night" were those new or old in Ham Radio get hooked up via Echolink.

Everyone is welcome so if you have time you are all WELCOME in the group (this group is active with average message posts of 1,000 a month so set your email settings to "daily digest" or "no email" and read online).

I flew into honolulu last year on Dec 20th for a short stop then off to the big island... took my PRO-93 with me, although there was pretty much nothing to listen to there on the big island where I was at, just one transmission from the police every hour or so :O I did hear San Bernardino CHP from California though through some skip that was going on at the time.. funny cause thats where I live at and I listen to it all the time ;D Heard it and I was like woah.. just like home haha.

Didnt have a problem getting anything past security, I used it on the plane to listen to the tower comms and whatnot.. just tried to keep it on the down-low so no one would get unneccesarily suspicious.

I'm curious if anybody has purchased the new RS digital scanner. I looked at one recently in a RS store. I don't mind spending the 500 clams, just wondering if there is any general concensus about if it's worth the money or not. At least they keypad lights up. I always thought it was pretty silly to press the light button on the 93...it's great to know what frequency you're on but you still can't find the buttons in the dark.....

I rarely give any input on this list, but I do read it daily and do appreciate the comments made.

Harold

Yes, I bought one, it works great. It is the same size/shape as the PRO-93 and 95. No digital card to buy, and you can use regular alkaline batteries or rechargeable ni cad or NiMh if you want.

I think there was a review in the latest issue of Monitoring Times that
was extremely favorable but questioned how many they would sell because
of the price tag.

8042. Keeping batteries fresh?

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-13 19:25:42 UTC
From: radionut
Topic: 8042 Message: 8042

Using the Pro-93 (or any scanner) plug in charger takes a lot of time. In the case of the Pro-93 with 1800 mAh batteries it takes 18 hours of charging time.

I wanted to get away from that so I ordered some 2000 mAh Ni-MH rechargeable batteries and a smart fast charger. Nice little charger that will work both from home (AC) and the car with supplied adapter. The Pro-93 draws about 90 mA so the 2000 mAh batteries should provide abut 22.25 hours of operation for the scanner.

My thought is to use two sets of batteries, keeping one set in the scanner and another set charged and ready to go. This will eliminate the down time waiting for the batteries to charge. It seems like every time I want to take the scanner someplace the batteries pick that time to need a charge.

My question is about how to keep the charged set of batteries fresh and fully charged? Anyone know how long you can have a set of AA rechargeable batteries sitting around and have them keep the full charge? I understand they will discharge (loose their charge) just sitting around. Some one mentioned putting the charged batteries in the refrigerator to help keep them fresh and fully charged, does this help?

Tips, ideas or thoughts please

Mike

Mike, I was in the same boat as you. Everytime I needed the handheld the batteries were shot. I went to Costco/Price Club and purchased a set of 4 Nicad batteries with a quick charger. The nice thing with the one I got is the charge light blinks when charging and stops when they are charged. I usually put them in right after the charge and refresh the depleted batteries. That way , I can leave them in the fast charger and not worry about having the backup set being fully charged. and I have 3 sets, one for my digital camera , and 2 for the handheld. I know the old saying of putting the regular batteries in the fridge works... but for the Nicad, I think the best way is to leave them in the charger.

---> My reply to what doogieoyea wrote 12/13/2003 2:16:54 PM

Yes, it seems like the way to go. I bought some extras for my portable shortwave radio as well. Someone just directed me to a good site on Ni-MH batteries (the energizer brand)

They are saying that the best storage tempature for Ni_MH is from 32 degree Fahrenheit to 30 degree Celsius = 86 degree Fahrenheit but they are saying store at the lowest feasible temperatures so it looks like the refrigerator would be a good idea.

Here is a link to the discharge rate for storage at different temps

http://data.energizer.com/batteryinfo/_borders/Image105.gif

The also say on that page:

Essentially all rechargeable battery cells gradually discharge over time whether they are used or not. This capacity loss is typically due to slow parasitic reactions occurring within the cell. As such, the loss rate (self-discharge rate) is a function of the cell chemistry and the temperature environment experienced by the cell.

Due to the temperature sensitivity of the self-discharge reactions, relatively small differences in storage temperature may result in large differences in self-discharging rate. Extended storage with a load connected not only speeds the discharge process, but may also cause chemical changes after the cell is discharged, which may be difficult or impossible to reverse.

Having just purchased a PRO-95, I am only now beginning to understand its lack of usefullness for the Billings (Montana) area. I now also know why Radio Shack dropped its motto "You've got questions, we've got answers" since it took trips to three Radio Shacks, and conversations with 4 different clerks, to find out even the slimmest information about the Billings trunking system and the PRO-95 capabilities (or lack thereof).

On the bright side (if true), the last person I talked to said that Billings has total implementation of their LTR system on hold, awaiting such time as the Yellowstone County Sheriff and Montana Highway Patrol acquire LTR equipment for their units, a slim prospect as both departments claim that they do not have the funds for the change.

In the mean time, according to this Radio Shack person, the Billings PD has resorted to using 453/458 mHz non-trunked system and the LTR equipment has been relegated to sanitation and maintenance department use. I have yet to get this information programmed into my PRO-95 (or anything else for that matter....the manual may as well have been written in Greek), so I haven't been able to verify this, but at least there's hope.

I'm glad to have found this group. I have been looking through past messages and am sure that I will find a wealth of information here.

I've been through security checkpoints at Orlando International (MCO), Daytona Beach Regional (DAB), Pittsburgh International (PIT), San Francisco (SFO), Chicago - O'Hare (ORD), and Philadelphia International (PHL).

I've NEVER had a problem at ANY airport.

>They questioned me about the scanner, just tell them you use for it
>weather radio or something.

I find it a lot better if you are completely honest about it. There is absolutely nothing illegal about a scanner (Especially if you are a Ham Radio Operator). By being completely honest, not trying to be "inconspicuous" with the scanner or anything, it shows you have nothing to hide.

I bought some LENMAR 2300 AA batteries for my PRO-93 at thomas distributing.. Along with the MAHA MH-C401FS fast/slow charger, which has a switch to select fast 90 minute charging or slow 5 hour charging.. with 3 sets of batteries (1600mAh stock R/S bats, 1800mAh bats from a store nearby, and 2300mAh bats from thomas distributing) I just rotate the batteries while keeping a pair stored in the battery holders they include free with the purchase and another pair stored in the charger on trickle.. it automatically switches to trickle current when the bats are fully charged so that you can store them and maintain their charge.. works perfectly for me :D

http://www.thomas-distributing.com is the site, they pretty much seem to have the cheapest deals aside from ebay as far as batteries go...

I removed all of the ham stuff from all of my scanners... I'm not a ham and got really tired of the dooms day weather spotters... 20 mile per hour wind and a 3 inch limb fell in the road... They were taking pictures and calling out others, enough was enough... I can do better than that watching the tv weather once a week...

As a person who works with computer networks and VOIP communications everyday and an armature astronomer I can appreciate the technical challenge HAM radio offers. Not a HAM myself, but the ability to use radio methods such as repeater networks, satellites, etc to talk to others all over the country / world. I am somewhat interested in packet-radio to, but listening in on the HAM bands on my scanner locally I just don't hear anything interesting except for somewhat personal conversations about this or that (how long someone has been a HAM or lived in an area or what kind of gear they have). I think IRC and other computer chat type programs are a much simpler and more effective way to share real-time communications with people all over the world. Of course one would have to have access to a computer and network connection. I knew a girl back in high school who was from Israel who told me that HAM radio was big over their b/c they could talk to friends and realities across borders they normally didn't have access to and telephone service wasn't available.

I much rather listen to the Police bands in my area as there is always something interesting going on right around me. I'm sure when we have our next major weather events there will be some interesting things going on the HAM bands when the power and phone lines go down. But I'll have to wait and see.

8053. Don Starr's Win95 Extended Frequency Range...

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-14 20:05:55 UTC
From: icomanus
Topic: 8053 Message: 8053

Hello,

I read a post on the net that the Win95 program starting w/ .06 release will provide a frequency range of 5khz to 1.3ghz and uses a 5khz stepping. - - My question is, does anybody know of a way to change the stepping to smaller increments?

I don't think it would be possible, but I thought that I would ask!

Take Care
Mark

There are actually _two_ step sizes for the "extended ranges".
For all extra frequencies below 406 MHz, the step size is 5 kHz.
For all extra frequencies above 406 MHz, the step size is
6.25 kHz.

These cannot be altered. If I allowed Win95 to send frequencies
on other steps, you'd find that the radio would never open
squelch.

-Don

From: robrtaylor@hotmail.com
Topic: 8056 Message: 8056

So how can I use this method to scan the 700 range on the 93? I've been trying but can't seen to get past 620.8 going up. I've also tried entering 621.00625 (and variations thereof) and going up with no luck.

TIA,

Rob in Salt Lake
http://users.burgoyne.com/~rtaylor/scan.htm

8057. Win95, PRO-95, and "Not a Multiple of 32" Talkgroups

Yahoo group: PRO-93_95 (2003)

From: entrekin@iname.com
Topic: 8057 Message: 8057

I am getting ready to travel for the holidays, and am trying to get my PRO-95 set up to scan in the areas where I will be. Several of these areas use trunked systems, but the talkgroup IDs are not multiples of 32. I know that this is a "status bit" issue, but I haven't been able to get a definitive answer as to whether or not I can use Win95 to program an ID that doesn't follow the "32*n" rule. If it can't, is that something that can be added to a future revision (or is it a limitation of the scanner itself)? If it can be programmed using Win95, how do I go about doing so?

I would also be open to the idea of using something other than Win95, although I really like it for everything I have done to this point. Just don't want to rule anything out a priori.

Many thanks,
Andy

Topic: 8057 Message: 8058

First, it's a "multiple of 16" requirement, as the low 4 bits
are, as you mentioned, status bits.

The PRO-95 doesn't even _store_ the low 4 bits (e.g. a Type-II
ID of 2483 is stored as 155 internally). Fortunately, it also
doesn't _test_ them against the IDs received in the control
channel.

For the 2483 example above, you must enter 2480 - that's the
"multiple of 16" that corresponds to 2483 (i.e. clear the status
bits). The radio will "hear" IDs 2480-2495, and will display
your entered ID of 2480 (or the associated alpha tag).

No software will change this behavior.

-Don

Having recently purchased a new laptop with no serial ports, I purchased a Belkin FSU109 to get serial comm port. It works fine with my PDA and GPS, but times out with Win93 (all settings.) The red indicator comes on with the green, as soon as I pulg in the casio cable (even before connecting the scanner.

I have spent lots of time searching and found that some are using the Belkin adapter with the scanner and software, but unsure that anyone is using the Casio FA126 cable with it.

Thanks,

Jeff H.

Cuz in Open Mode you can't lock out school busses, trash trucks, and water meter readers unless you waste precious ID list space just to list them and then lock them out in Closed mode.

My local TRS has Talkgroup IDs for all governmental municipal services for my city as well as for 5 or 6 surrounding communities. Most of us prefer not to listen to these 200+ IDs, so we scan in Closed mode.

Right now, in the evening, I'm scanning in Open mode, because most municipal services are shut down and I can hopefully pick up other PD/FD/EMS groups that don't make my ID list. I can tell you, though, that the telemetry signals (controlling sprinkler systems at schools and parks, etc.) are about to drive me crazy. I can't lock out Open mode IDs, so I'm going to have to delist 3 or 4 Closed mode IDs, just so I can add these and permanently lock out telemetry from both modes.

Toby

Currently Sam's Club has an Energizer Charger Combo deal
Model:RESAMPC-8 that Includes 8 AA 1850 mAh Nickel-Metal Hydride
Batteries at slightly less than $20.00. Looked like a pretty good
deal compared to Radio Shack's four batteries at $19.95. The charger
holds four batteries at a time and trickle charges after a full
charge keeping batteries fresh. Energizer claims that the batteries
can be charged over 1000 times. The charger is the modular type that
has no wires and is plugged into an AC outlet. (Like one of those
goofy plug-in stink bombs the wife buys.) The charger also has LED
indicators show that show the charging status. So-far this is best
deal I've seen. Charge a set while discharging the other.

This works for me.

---> My reply to what parish wrote 12/16/2003 8:20:47 PM

The rate of self discharge for any battery depends on the temperature at which it's stored at. Stored at 70 degrees F (20 C) NiMH batteries will lose up to 40% of their charge within a month. If they are stored at a higher temperature, they will self discharge at an even higher rate. Stored at a lower temperature they self discharge at a lower rate.
The higher the temperature, the more the free flow of ions or self-discharge from the battery. Storing primary batteries (D's, C's, AA's, AAA's, 9 volt, etc.) in a cooler environment slows down this rate of discharge that all batteries experience even when not in use, hence a longer shelf life. However, if this is done, it is important that the batteries be kept as dry as possible by keeping them in an airtight container in the driest part of the refrigerator, the door for example. Long term exposure to moisture inside the refrigerator can cause internal corrosion to the battery. When removing batteries from the refrigerator, allow them to warm up to room temperature before using them in your device.

---------- Original Message ----------

Currently Sam's Club has an Energizer Charger Combo deal
Model:RESAMPC-8 that Includes 8 AA 1850 mAh Nickel-Metal Hydride
Batteries at slightly less than $20.00. Looked like a pretty good
deal compared to Radio Shack's four batteries at $19.95. The charger
holds four batteries at a time and trickle charges after a full
charge keeping batteries fresh. Energizer claims that the batteries
can be charged over 1000 times. The charger is the modular type that
has no wires and is plugged into an AC outlet. (Like one of those
goofy plug-in stink bombs the wife buys.) The charger also has LED
indicators show that show the charging status. So-far this is best
deal I've seen. Charge a set while discharging the other.

This works for me.

8072. Win 95 copy and pasting

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-17 19:09:13 UTC
From: socalchevyguy@aol.com
Topic: 8072 Message: 8072

OK... I'm trying to copy and paste from excel into Win95 V00.13

When I paste from excel to win95 it only pastes into the Alpha Tag column. I want it to paste into the freq column. How do I do that? I've clicked on the freq column and tried pasting but it still pastes in the alpha tag column. I've tried copying just one column as well as 3 columns.

Thanks,

Wayne
www.WayneClemons.com

Topic: 8072 Message: 8073

I found that I had to click it twice or click then delete the spaces
before pasteing.

Wes

8074. Re: Win 95 copy and pasting

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-17 19:40:27 UTC
From: parish@ev1.net
Topic: 8072 Message: 8074

I ran into this at times and found a couple of reasons as why but was not sure if it was consistant. I expect my error was consistant but I kept trying until I got it.

I was attempting to input Motorola II trunk talkgroups at the time. I found that the trunk tag was not divisible by 16. This created a failed paste. If you are using Excel to copy from in another column divide the talkgroup numbers by 16. =b2/16 for example (assuming B2 is where the info is)then fill down to see if all are hex numbers.

Don Starr posted somewhere that if you are trying to program a talkgroup say 7281 you should enter 7280 this will allow you to hear 7281. You might try to manually enter the data one at a time as well to find the offending bit of info in the column that would not paste. **Remember the talkgroup ID must be divisible by 16 to be entered.**

Another goof I made was trying to input a text string that had more that 12 characters, this included spaces. This would bomb the entire paste and put a column of data in the wrong field and would not allow the paste to work correctly.

Hope this helps.

Happy Holidays ladies and gents...

I have been receiving inquiries on a scam located on Ebay... It seems that someone is trying to sell zipped files that operate under Don's programs... Basically there is a "zipped" file that is supposedly to "unlock" the alpha scanners... From what I have read on the listing as well as researched from other locations, this is a bogus thing that anyone can do simply by taking a few minutes to type in their frequencies in the "extended" coverage as Don has discussed before... I can only suggest that you use caution on this as its all listed on Don's site for FREE and may have been taken from there... Some radios will not accept what he is "selling" due to internal checks... Use caution... I will attach a few messages that I have seen and received on this...

Please look at this and tell me whats up.
http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&item=3061207899&category=40979

I have several emails from this loser and now he informs me not to bid on it because I have been banned from the auction. I guess I asked him to many questions By the way his name is David Moltrup and his email is dmoltr_blink@... Stay away from him.

Be careful with the format of the data. For example, five decimal
places and no commas in the frequency. Don Starr has provided a
sample, http://www.starrsoft.com/freeware/win95/win95formatter.xls .

8079. Pasting Freqs Into Win93/95

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-18 15:01:28 UTC
From: Joe Hathaway
Topic: 8079 Message: 8079

When pasting fields (or typing them, for that matter) into Don Starr's program, please remember that the Win93/95 interfaces come with CHARACTERS ALREADY IN THE "BLANK" FIELDS, which must be highlighted before pasting or typing. The characters "PRE-INSTALLED" are BLANKS, which are valid space-consuming characters, just like visible letters. You can't see them, but blanks do take up space.

In other words, if a 12-position field has blanks in it, and they are not deleted or highlighted before entering data, the field will not accept anything, as it is already full. If you are pasting a column of, say, 13 freqs, the column to which you are pasting must have at least 13 fields highlighted, and only that column can have highlighted fields (or the Paste command will not "know" where you want to put the data).

Joe

Do you have each freq set as the right mode? Do you have the bank set in the right mode? maybe a little more detail.

AND CANT GET WIN 95 TO WORK ALSO
What type of cable are you useing? Homemade or from radioshack? If from RS then what Model #? Check and make sure that it is set to the right com port.

8082. Server upgrade Sunday

For those who have been actively listening to my online scanner feed, good news, there will be a server upgrade Sunday afternoon... I am switching to a new faster machine that will be complete on Saturday... I should have the operating system installed and the feed software ready to go and a 24 hour run test completed by then... The current machine is sending an audio error on day 14 without a reboot... I plan to have this back by 10 p.m. cameras and all...

Win93 doesn't work with the PRO-95. You need Win95. To convert
your P93 files to the P95 format needed by Win95, see the "Data
Converter" app on my web site:
http://www.starrsoft.com

From: Bobby R.
Topic: 8086 Message: 8086

Does PRO-93 work with the USB to serial converter? I am trying to use it on a notebook computer with the Pfranc converter as well as the Pfranc 2-way cable. I am getting windows errors.

I have tried Extra Write Time under Serial Configuration, as well as other combinations of settings.

Thanks for any insight!

Bobby

8087. Trunking not working!

From: Ryan
Topic: 8087 Message: 8087

For some reason my Pro 93 is not picking up my local police. It has been working no problems. Then today i noticed my other scanner (bc895xlt) was picking up the police and pro93 wasn't. I just started using the win93 software, but i believe i have done everything right, and last night it was working fine. I can't figure out why it is not picking up our local police now. It just stopped today. Our police use motorola type II i believe with a fleetmap of E1P10. Why will it not pick them up all of a sudden? If i manually put it on a channel it picks up the police but don't show the id tag. I don't understand, please help!

It sounds to me, Ryan, as if you don't have all your control channel frequencies programmed in or (more likely) a control channel frequency has been manually locked out.

If you have a frequency locked out, and that frequency becomes the control channel, the trunking side of your radio will die until the control channel is moved back to a frequency you have not locked out.

Another way to look at it is if you can scan your trunking system in conventional mode and NOT get hung up on the control channel frequency, some frequency is locked out (or missing) that shouldn't be and the trunking side will not work.

Check your lockouts.

For Type II MOT you don't need a fleetmap, unless you're talking about Type IIi. It won't track right with the fleetmap. You only need a fleetmap with Type I and IIi.

Nice looking board, but it needs some maintenance.

I tried to view one of the forum topics and got a message: "An error has occurred!"

I figured that maybe the error was that I hadn't registered. So I registered.

Now the error message says:

"An Error Has Occurred!
Invalid username/password combination."

Fix it!

It would help if you posted your location and the type system you are trying to monitor. Someone in your area may already have a good program that you could clone. Static can be caused by many things. You must post the frequency it hangs up on. Pending more info.

it didnt matter what i tried to monitor unless there was
a clear signal all i would get was static. this wasnt the
case when i first got the scanner a month ago. at that time
it worked like a champ. i was wondering if i may have pressed a
button that could have caused it to be like that.or if useing the
charger for power insted of a battery could have caused it not to
work.as for what i was trying to monitor after i did the reset it
cleaned out everthing i put in to the system so i was trying to
monitor the factory settings.and yes i know how to make it scan on
its own. it was like the squelch button wasnt working at all.

8100. Anyone use this scanner antenna?

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-23 02:58:45 UTC
From: Jackie LaVaque
Topic: 8100 Message: 8100

Hi there,

I'm getting a Pro-95 for Christmas and I'm looking for a small antenna to replace the stock antenna that I can use on my balcony and/or near a window. I found this while searching on eBay, and it looks like it *might* suit my purposes:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3065794712

I live in an apartment, on the second floor of a three-story building. My balcony is wood but I could make some sort of counterpoise for this by clipping it to some wires that would function as makeshift radials, then clipping it to a metal plant hanger, or perhaps by clipping it to something else that's metal. I would like to try it outdoors first. I need something small and stealthy, for my building doesn't allow large, visible antennas on one's balcony. But I could hide a small one such as this.

Anyone use one of these antennas or something similar to it? If so, how did they work?

TIA,

Jackie

Jackie, you are better off going to Radio Shack or your nearest amateur radio store and buying a vhf quarter wave antenna with a magmount base. The antenna that is being auctioned has an ancient motorola connector. The antenna connection on the 95 is a bnc. Too much loss from the adapter that you would need to connect to the antenna. A simple discone antenna(again--the quarter wave) will clamp onto your balconey, and then you add a run of coax to connect to the scanner. I believe RS still sells the vhf discone. If, not, somewhere on E-bay you'll find one.

Hope this helps,
Larry

p.s. Feel free to e-mail me off-line with other questions. LT

Jackie... I am also the owner of a Pro-95. Being on the second floor you might want to wait and try your rig out first with the stock antenna. At your height, you might be surprised at the performance. At my situation, the second floor of a two story house... I receive 400 and 800 Mhz signals from Tampa.... at lest 35 miles no problem with the stock antenna. I have a discone still in the box.
Again, considering your station height, give the stock antenna a try.

Yes, if you have a special freq range you are having trouble with. You can also use the wrong antenna to cut out intermod in a certain range. If you are bothered with UHF digital pagers install a VHF stubby. This cuts down on UHF gain and works OK on other freq's. Some ant's at bncantenna.com

8110. Little Rock Pro-95 file

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-24 03:42:30 UTC
From: dave297
Topic: 8110 Message: 8110

Hello all,

By chance does anyone have a Little Rock file for the Pro-95? I'm heading off there tomorrow and thinking about taking the ole scanner with me.

Thanks,
David

David,
This isn't specifically a 'file' but it does have the LR trunked frequencies listed. I have these programmed into my Pro 95 and although I live about 75 miles from LR, I am often able to monitor them, depending on atmospheric conditions.

Be carefull of that site. If you accept cookies or say
yes to the program install, you will be getting
spyware(adware) on your computer. This is normally
used to track your usage of the internet so that pop
up ads can be tailored to you, but it can also track
all your keystrokes and/or harvest other info from
your computer and send it back to it's originator..

8116. Is there a way to export freq from win 95

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-24 17:43:21 UTC
From: pony502002
Topic: 8116 Message: 8116

I would like to export all my freq and tags into maybe a wordpad or some other format to send to someone who does not have a pro 95 and can't use a win 95 file. Is there a way and how?

8117. Re: [PRO-93_95] Is there a way to export freq from win 95

Yes, but you will have to do one bank at a time.
1-Open your file in WIN95
2-Click on the first freq.
3-Push CTRL-A to highlight all the freqs.
4-Click COPY in the EDIT menu.
That will put them on your clipboard.
Now open a Wordpad document and hit CTRL-V.

Then do the same for each bank and for each sub-bank.

Dick

Is that true of Fortune City sites in general, or only
this particular one? I've never been prompted to
download anything from this site, and as far as I know
my Pest Patrol, SpywareBlaster and Adaware
anti-spyware programs haven't detected anything
heinous from this website. Still, it is good advice
you offer.

The website that had the link. As I was going to different pages on the site, I was asked repeatedly to download software from Gain, which is adware. You may have it blocked with your protection programs. I just thought I'd put it out there as awarning for possible newbies.

An easier way is to open your file, then select >File >Save As >Save as File Type > .TXT.
The file can be opened in Notepad and most Word Processors.

Phil

Yes, but you will have to do one bank at a time.
1-Open your file in WIN95
2-Click on the first freq.
3-Push CTRL-A to highlight all the freqs.
4-Click COPY in the EDIT menu.
That will put them on your clipboard.
Now open a Wordpad document and hit CTRL-V.

Then do the same for each bank and for each sub-bank.

Dumb question again. In the search mode it seems I can not scan the CB and marine channels but can scan the police/fire and ham bands.

How do i set the Pro-95 to scan the CB and marine channels without putting them into a bank?

8135. Pro95 Trunking Question

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-26 15:17:37 UTC
From: maxxmanic
Topic: 8135 Message: 8135

I recieve a Pro95 for Christmas from my wife and I think it's really neat. Radio Shack put some local freqs into it when she bought it, and it scans them just fine.

I programmed some trunking freqs into it that I found on www.scanatlanta.com for Macon, GA. I live in Byron, GA just about 15-20 miles south of Macon. The radio stops on what I think is the control channel and it appears that the ID's change. The problem is that I get no audio, I can't hear a thing. The reason I gave location info is because I think I might be too far away for the signal. Does that make sense? Any ideas? Please help!

Thanks in advance, and Merry Christmas.

Maxx

Yes, you probably are too far away to receive Macon's system very
well, if at all with just the stock antenna.

If you really want to pick up Macon's system from that far out, you
are going to probably need a directional antenna, mounted on a mast.

I¹m new to this and although I¹ve read the manual I can¹t find what I □m
looking for.

Suppose I want to store a frequency in channel 1 in bank 3 (channel 301).

How can I go directly to bank 3?

I can do it but only by scrolling through all the channels. Thus if I¹m in
101 I have to scroll through 102, 103 all the way up to 301. there must be a
better way.

Just press manual, then the channel number, then press manual again,
and it will take you to that channel.

Only 15 - 20 miles from the signal source, yet your
scanner cannot receive? Yes, it could be your antenna,
depending on the terrain between you and Macon. Is it
hilly? You might also check to see if you have your
attenuator on. Check your squelch as well.
I live in the very flat delta of east Arkansas, and
some days and nights I can pull in signals from as far
as 100 miles away, believe it or not.

Why does having to press a button to scan a range make it junk?
The PRO-95 is awesome for the price, I think...
And MUCH easier to program by hand, if need be...

BTW...SOME RadioShack Scanners were made by Uniden...Only recently (I
think since the PRO-92) are they made by GRE...

8147. Bank Not working

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-26 23:11:39 UTC
From: Rob Blau
Topic: 8125 Message: 8147

I have two banks set up, with largely duplicative frequencies.

Bank 0 works just fine.

However, if I turn it off and turn on Bank 1 I get nothing, even though many of the same active frequencies are in it.

Any ideas what I might have done wrong?

Rob Blau

8148. Re: [PRO-93_95] Bank Not working

If you had pgm'ed those banks with software rather than manually you could
SEE what was in error. No one can answer your question without more detail.

Fair enough.

What detail do you need?

Rob Blau

Don't have any software.

Topic: 8125 Message: 8150

Post detail of trunking system. Details on the way it is programmed.
Trunking ID's. Your location. Could be a scannist in your area could help.

8151. Re: [PRO-93_95] Bank Not working

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-27 03:17:04 UTC
From: Rob Blau
Topic: 8125 Message: 8151

the problem turned out to be that the control frequency was attenuated.
Fixed that and the bank that wouldn't scan started to.

8152. Database Question !

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-27 06:53:55 UTC
From: jmcs23@yahoo.com
Topic: 8152 Message: 8152

Hello. I tried the link and it did not work. Can someone explain this idea better to me, or even provide the picture that's mentioned? Thank you!

*Here's the database section I am talking about:
Description: Mismatch in throat depth of BNC connector results in loose antenna.

Effect: Even though the antenna is making good RF contact there is concern for pronounced wear due to movement. Simple fix is to put small rubber o-ring around the the female BNC on the PRO-93. Photo details are available at http://groups.yahoo.com/group/PRO-93/files/pro93antfix.jpg

8153. Re: Database Question !

Yahoo group: PRO-93_95 (2003)

From: Bill Shulad
Topic: 8152 Message: 8155

Hello. I have a PRO-95 and am running a motorola
trunking system on it... What would you people suggest
for the delay time for the group ID's
(none,.5,1.0,1.5,2.0,2.5,3.0,3.5,4.0 seconds)? Also,
should I have the delays on each frequency?
Thanks.

I have a .5 second delay on mine... It all depends on your prefrences... I can hear everything here and really want the radio back in scan mode as soon as the channel is clear... My internet feed is 3 seconds delay on the frequencies and 2 on talkgroups... A trunked frequency does not need a delay since they operate off control channel... Your talkgroup delay will take care of that if you prefer one...

The default (2 Sec.) seems fine, but it's more of personal preference.
I like 1.5 Sec myself.

I think the default delay time is 2 seconds, which seems just about
right for my listening. Since the delay is triggered by the
disconnect tone on the control channel you can not set it differently
for different talk groups.
You can set each conventional freq. for a different delay. I like the
delay on for every freq., but it's personal preference.

for those who are new to radio monitoring thruout the year you will notice different frequency ranges will come in better depending on the time of and the season of the year. i am a amatuer radio operator and have used this to my advantage on many occations. but for those of you who want to know more just ask. you will find many frequencies will become active for you. n3scf

From: TwoIsisNAnkhs34@aol.com
Topic: 3863 Message: 8163

I have my pro 95 a little over 4 months and have been a little apprehensive to program it with the win95 program.

yesterday, i decided to set away a few hours and read and printed many important emails on this list and hopefully later will give it a try.

my main question is do i first have to enter all my info from whatever freq. source i use to the excel worksheet and when that is all done, save it to a text file, then open it up in the win 95 program and then upload it to the scanner or what?

any and all help would be greatly appreciated.

also i can't seem to find any files for Long Island, NY (Nassau and Suffolk Counties)

Thank you one and all and have a Happy Holiday season.

Helene

8164. Pro 95 ID delay?

From: peter25202003
Topic: 8164 Message: 8164

I have a Pro 95 which is new to me. I have programmed all the trunk freq's for my area along with the ID's.

Everything seems to be working fine except the ID delay, (NOT THE CHANNEL DELAY)there is none or very little. I programmed a 3.5 sec delay as per page 66 in the manual except I did not do it when the ID's were programmed I changed it from the 2 sec. default setting to 3.5 after ID's were entered. It seems as if there is no delay at all, not even two seconds.

Also does the ID delay effect each individual ID or the whole bank? After I change one ID when I scroll to the rest to change them they have already changed.

Is there somewhere in a menu I need to turn it on?
Peter

You only need to open the Win95 program and put in your frequencies and text info... Then send it to the scanner...

Here in Southern California I have monitored police agencies that sound like they're from "down south" (on the east coast of course) and have heard people from that region report hearing CHP. It's a lot of fun to try and ID these far away broadcasts.

In your case, are we talking about the stock rubber duck or some typr of after market antenna?

Actually, size DOESN'T matter ... when it comes down to propogation DX Skip. Those radio waves could come bouncing out of the troposphere (or whatever it is) from right above you. What matters more is the quality of the radio receiver .... how low a S/N ratio it can receive and still put something intelligible into the speaker.

When I lived in California, I used to get police/fire from Pennsylania to Maine regularly on VHF. They were Radio Shack receivers with stock antennas. No towers or anything else outside the house.

The GRE displays will drop out eventhough the scanner freqs are still in
delay mode. You will notice this by watching closely.

Even though the signals come in at an angle and are usually 39 or 42MHz a whip type antenna will help over a rubber duck. An outside antenna with low-band coverage [length] 50-65" works good on days signals are normally weak. I monitor CHiPS in winter and several others in summer. Good Luck, Larry

Actually, size DOESN'T matter ... when it comes down to propogation DX Skip. Those radio waves could come bouncing out of the troposphere (or whatever it is) from right above you. What matters more is the quality of the radio receiver .... how low a S/N ratio it can receive and still put something intelligible into the speaker.

When I lived in California, I used to get police/fire from Pennsylania to Maine regularly on VHF. They were Radio Shack receivers with stock antennas. No towers or anything else outside the house.

Toby

Three of the scanners running here had to be really limited to the area for frequencies... Most of the statewide stuff was locked out because I was hearing things from far away... The scanner on the feed is limited to a one county radius and is usually hoppin... I took out the state police and the toll road due to the amount of conversations was getting so hard to track... There is 4 antennas on the top of the tower... 2 are scanners, 1 CB, and a very large tv antenna... I have played with VHF boosters and line amps from 8db gain to 30db gain, I found good ole RG8 was better without any amp at all... I can easily pull 50 miles like I am there... On good nights like last night several hundred miles is not out of the question... I had some pics around here from the day I put the tower in place... I'll see if I can find them...

Get 800MHz trunking talk groups from trunkedradio.net Enter them on right window after setting the trunking mode on freqs and screen.

Other than the Trunked Bank (0) having to be in a specific order .... Does it mater what order frequencies get programmed in... In other words... I want to group the fire in one bank, the police in one bank, so on and so on... I will be doing this manually... Need to wait for the 2 way cable to come...

The other stupid question is this.... I live in the Poughkeepsie area... I am using the Poughkeepsie Trunked list... I noticed that 1,2,3,4,5,11, to 20 are being used... while 6,7,8,9 are not.. Can I use one or two trunked frequencies from anther area that is close to me... Millbrook-Chestnut Ridge tower uses 4,5,6,7..can I add frequencies 6 and 7 being that they are empty or not???

Thanks
Scott

Bank (0)does not need to be in any specific order, some trunked systems do, GRE Ericson and Motorola LTR for example. For Most Motorola systems all you need to do is program the control channel. and set the bank and frequency to the MOT setting. The scanner should do the rest. For Ericson you program the Freq's in logical order skipping (0) you start with one.

I don't understand your second question at all.

The frequencies in a Motorola trunked system can be entered in any order. EDACS system frequencies must be entered in proper LCN order. The PRO-93 and PRO-95 don't track LTR systems, so that's a moot point.

Ken

8184. Automatic Voice Channel Obtaining

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-29 03:37:20 UTC
From: socalchevyguy@aol.com
Topic: 8184 Message: 8184

On the Radio Shack Pro-95 it allows you to program in just the control channels and will automatically find the voice channel. Well, this is a problem for me. I try to monitor the Ontario (system 9) and San Bernardino City (system 10) systems and there is one channel in each system that keeps coming in with lots of static. I further noticed that this is not one of the valid channels listed for these systems. Is there a way to turn that feature off? I do have all voice and control channels programmed in the appropriate banks.

Also, is it true the Uniden scanners do the opposite of the RS scanners? Meaning, I would have to program all channels and not just the control channels.

Thanks,

Wayne

When I first got my scanner I was told NEVER EVER put anything in Bank "0"
other then Trunked frequencies...
I was told that they needed to go in a specific order other wise the
trunking will not work...
I have been using Site ID:0001 at the following link
http://www.nf2g.com/scannist/index.htm

My question is can I add to one from another???
Can I put in Site ID:0001 spaces 6-10 (which are blank) from Site 0004
spaces 6,7

I use EDACS .... I understand they must go in order... My first question was not asked correctly... I live in an area where I have access to two possible towers... I am using the most common tower... that in called Site 0001.. The other tower in question is called Site 0004... Can I mix and match from the two...??

The other question was answered I think... So I can put in regular frequencies in any order... Doing this will not effect the scanners ability to pick up them???

you can put ECADS in bank 0 just not the first channel skip 000 and put the first freq in 001. the most common tower dosrnt matter you may have to use the one you pick up best.

8189. Cleveland Area Help

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-29 05:51:38 UTC
From: Mark
Topic: 8189 Message: 8189

Icomanus posted a fairly extensive file listing Cleveland area freqs, including Fire, Police, Sheriff, and Hopkins Airport (I wish I had chacked BEFORE I spent the holiday there). However, I am specifically looking for the trunked system that the Fairview Park PD uses. Anyone have any idea if there is an existing file for them?

Thanks in advance.
Mark

8190. Scanning for Dummies Revisited (for so-called 'Stupid Question')

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-29 07:28:53 UTC
From: Toby Zidle
Topic: 8181 Message: 8190

I was doing some research to prepare an answer to Scott for his so-called "Stupid Question" re programing 'towers' for an EDACS system. In my initial answer I was going to say that individual towers don't matter. My city has 3 or 4 transmitting sites to cover about 600 square miles and the sites all work concurrently. Program the scanner with the control channel frequencies and then set up your Scan List and Alpha IDs and that's all you have to do. Forget about 'towers'.

That's the simplistic answer.

However, there are regional systems that are, in essence, multiple systems networked together for ultra-wide geographical coverage. They are called Smart Zones or Smart Nets. For practical purposes, you still select control channel frequencies of the nearest tower and program the scanner as if you've got just a single local trunk system.

If, however, you want to hear some specific talk groups associated with a non-local tower (or to hear local police, medical helicopters, etc., when they roam far out of the local area), then in a SECOND bank, program the control channel frequencies of that non-local tower and an associated Scan List. With the two towers in separate banks, you'll be able to trunk-scan both of them at the same time.

Anyway, I was researching the issue through Google and found a web site that deals specifically with Smart Zone and Smartnet Trunking Systems (that may be at the heart of Scott's "Stupid Question") and, at the same time, addresses the nature of scanning and trunking and topics that would fall into a good Scanning for Dummies book.

It begins: "Two-way radio, or Police radio, are very broad terms that encompass a wide range of different technologies. Lets look at some of the terms you have heard used both correctly and incorrectly. As a subject becomes more technical, it becomes very important that we all speak the same 'language.' .... Simplex is the simplest form of 2-way radio communication." That, certainly, would be at the beginning of a Scanning for Dummies book.

Credit goes to "Wiz" in Seattle, WA for writing an excellent tutorial.

Here's the link:

http://radioscanning.wox.org/Scanner/other_info/scanning_of_smart_zone_and_smartnet.htm

No, you cannot mix two EDACS systems in the same bank. Yes, regular, non-trunked frequencies can go in any bank, in any order. Only EDACS trunked frequencies must be in a particular order.

Ken

Fairview Park isn't on a trunked system that I know of...

I have these listed for Fairview Park:

154.250 - Fairview Park Fire Dept F1 - Dispatch (Along with other Depts)

155.610 - Fairview Park Police F1 - Dispatch (Along with other Depts)

155.370 - Fairview Park Police F2 - Statewide

155.850 - Fairview Park Police F3 - Car-to-Car

155.535 - Fairview Park Police F4 - Secondary

46.540 - Fairview Park City Schools

158.940 - Fairview Park Service

I hope these are of help to you...

Subject: [PRO-93_95] Automatic Voice Channel Obtaining

On the Radio Shack Pro-95 it allows you to program in just the control channels and will automatically find the voice channel. Well, this is a problem for me. I try to monitor the Ontario (system 9) and San Bernardino City (system 10) systems and there is one channel in each system that keeps coming in with lots of static. I further noticed that this is not one of the valid channels listed for these systems. Is there a way to turn that feature off? I do have all voice and control channels programmed in the appropriate banks.

Also, is it true the Uniden scanners do the opposite of the RS scanners? Meaning, I would have to program all channels and not just the control channels.

Thanks,

Wayne

Larryscan,

Thanks, what I notice is that after the carrier drops the display goes back to the scan disply and more often than not I start picking up another conversation right away. I live in very busy area, the system I listen to is shared by several Police agencies, county sheriff, numerous fire and ems, the sheriffs along dispatch just under a 1,000 calls a day. SO almost always when the carrier drops I am picking up a different conversation. OCASIONALLY when the carrier drops and the scanner resumes scan mode the ID # or ID text(if programmed) will stay on the bottom of the display for the 3.5 sec. delay I have it set for, but only on occasion. I live very close to a tower in fact I am so close I can recieve without the rubber duck even on the radio so I don't think weak signal is an issue. Any other suggestions? Anyone.

Could it be that it really should be .9875 rather than .975 / I would set up two [2] banks with the same basic info. 1- with controllers only and one with all freqs. There's got to be a way to figure it out.

OK... 2 questions then.

Can a control channel also act as a voice channel while its a control channel?

If I just program in the voice channels without the control channel, will it still trunk track?

Wayne

Subject: [PRO-93_95] Automatic Voice Channel Obtaining

On the Radio Shack Pro-95 it allows you to program in just the control channels and will automatically find the voice channel. Well, this is a problem for me. I try to monitor the Ontario (system 9) and San Bernardino City (system 10) systems and there is one channel in each system that keeps coming in with lots of static. I further noticed that this is not one of the valid channels listed for these systems. Is there a way to turn that feature off? I do have all voice and control channels programmed in the appropriate banks.

Also, is it true the Uniden scanners do the opposite of the RS scanners? Meaning, I would have to program all channels and not just the control channels.

Thanks,

Wayne

I don't think so (but I'm sure someone will correct me
if I'm wrong).

> If I just program in the voice channels without the
> control channel, will it still trunk track?

No.

Don is correct... The control channel may change every 24 hours or so, but they do not change around from one to another randomly at a moments notice... The control channel is data only and can not run voice at the same time... It would be like trying to talk to a person while your computer is on the dialup to the internet... You can program only control channels, but remember they may change to the next and you will not hear conversations as you had been hearing previously... That is one reason that you might want to setup all the frequencies in your scanner...

When monitoring trunked systems is it better
to have delay for each channel turned "on" or "off"?

That's personal preference. Really it depends on just how much
traffic is in your area. I turn mine of and on all the time depending
on just how busy it gets.

The delay would be for conv signals and set the re-scan timer for trunking.
The delay as I understand it does not work on trunking.

Sure it does...it's a TalkGroup Delay...it'll hold the talkgroup for a specified time...
Maybe it's in need of repair...

8207. Stuck Pro93

Yahoo group: PRO-93_95 (2003)
Date: 2003-12-30 20:06:26 UTC
From: jmtworc
Topic: 8207 Message: 8207

Wow, I've had the radio for maybe 2 years without a problem at all... I've encountered the Bank 9 Tag bug, however this is far more serious. I just decided to reprogram the entire radio with updated freqs and whatnot for the new year, and after a complete upload to the radio, the radio freezes on M000, with no functions of any buttons (manual, scan, backlight, ANYTHING). I've changed some banks around, but still nothing. Here's what I have:

0: EDACS 800MHz
1: (empty)
2: (empty)
3: (empty)
4: conv pd
5: conv fd
6: conv ems
7: MOTii 800MHz
8: MOTii 800Mhz
9: (empty)

I've tried resetting and intializing radio to no success. All setting are default. I'm using Win93 for programming. I can upload/email the file to those who are more curious. Thanks.

- Joe
